Actually if the receiver has a TSO, it can be used in flight. (A TSO
or Technical Service Order means it has been specifically blessed by
the US FAA, and is designed for and approved for aircraft use) An FAA
TSO is accepted without further discussion in many countries,
including Australia.

A few years ago I was actually carring a aircraft GPS on an airliner,
and asked if I could turn it on. When the Captain discovered it was a
aviation TSO'd unit, I got an invite to the flight deck, and the unit
made most of the trip as an additional navigation device in the
cockpit.

Precisely. The simple fact is, the slick salesmen haven't found a way to
get around
the laws of physics, quite yet. They have, however, found a great new
"income
channel," an income channel which allows the "account executives" to
"maximize
ROI," or some such. But, in one word (baloney), you managed to capture the
bottom line.

The unfortunately vague article I found (Elektor Electronics, Dec. 2002)
said that the (sub)carrier spacing is 66.666 Hz, and that they use 64
QAM modulation. So there are somewhere around 160 subcarriers in a 10
kHz wide signal) and at 6 bits per baud the baud rate must be in the
20-40 Hz range. (As I understand it, the signal is around 40 kBPS).
(There's more tolerant form that uses 16-QAM).

: >
: > :
: >>
: > 1. The Fairness Doctrine could be resurrected and rewritten to assure a
: > balance of voices/opinions are heard on the public airwaves.
:
: So, why doesn't the government also require newspapers to have a balance
of
: voices and opinions?

Is this a rhetorical question or what? That's the first thing taught in
Mass Media 101. There is a limited amount of spectrum space available for
utilization. That's one of the reasons why the FCC was (supposedly)
created (I remember when the FCC was NOT a lap dog for the broadcasters).
To manage a natural resource which supposedly belongs to the people
(although that is now empty rhetoric). The same conditions hardly apply to
the printed media.

:
: What are the details of this rewrite? The old fairness doctrine was a
club
: for partisians and others with an ax to grind. How would the new
fairness
: doctrine keep the political partisans and kooks from harassing media
: stations with nusiance complaints? Who would define what a nuisance
: complaint is?

so what do we have now? Rushbo "Oxy" Limpballs 24/7

:
: Should this new fairness doctrine cover internet radio, satellite radio,
: satellite TV, and cable TV?

no

:
: Yeah, people listen to what they want to listen to. I have no idea if
the
: IQ factor is up or down. I am sure people would be stupid to be
listening

: to things they don't want to listen to.

The people listen to what the corporate Crud Channel goons (and their ilk) shovel out of the broadcast latrine.

:
: I am also sure there has never been as much bad radio as there is now.
: There has never been as much radio as there is now. There are more
: stations broadcasting more hours than ever before. Too bad. As a radio
: hobbyist, I miss the days of easy coast to coast dx'ing.

The FCC responded to what the broadcasters wanted and now both AM & FM have been technically ghettoized.

:
:
: I dislike most of the stuff on the radio. So what? There's still plenty
to
: listen to. Nobody makes me listen to Limbaigh, and I don't. I can't
stand
: Sport Babble but I don't have to. Mostly I listen to a local FM Jazz
: station and US domestic shortwave radio. For me, radio has never been
more
: entertaining. There are also some local Spanish and Polish language AM
: stations here with good music. Very little of this was around 30 years
ago.

Yup. There's sure al ot of cariety. A "classic rock" and "hot hits" and "modern country" station in every town. All voice tracked with the same 20 minute spot load anmd 200 song playlist. And news? What is that? Where did it go?

:
: When was there more radio diversity? When there were three of four radio
: networks, each playing their own similar so-so comedies or dramas? When
: each of the top 40 stations in the US were playing "Muskrat Love"? The
: radio industry is like the rest of the entertainment industry. As soon
as
: somebody comes up with an idea which grabs a part of the audience, that
idea
: gets reused over and over in each market.

See above. You are equating quantity with diversity. I laugh at the way "top 40" has been fractionalized into "classic rock ("B" side losers)," "hits of the 60s & 70s," "alternative," and the latest insanity, "old school, " ad nauseum. Give me a break! That is hardly diversity.

Diversity and creative died about 15 years ago. About the time the big push for deregulation began.

:
: If that's true, then the problem will fix itself. These overpriced radio
: stations will soon go for giveaway prices. You'll buy a radio station

and
: so will I. I will realize that your programming ideas are so good, I'll
: copy them all!!

That's the whole point! YOU can't buy a radio station and neither can I. Radio stations have become so overpriced thanks to the accumulation of corporate control that few single ownership outlets remain. I love having all my programming delivered voice tracked from some studio 1500 miles away. The problem is solving itself: radio is dying.

That shouldn't be all that shocking. If it was a "wire" it could have been for almost anything. Remember he is a "Sitting President" with all of the crazy security that goes with the job. It could have been something to do with that. You didn't see any overt signs of security while watching the debates on TV, but I'll bet you there was plenty you didn't see.

1160. LA Times article about Radio Huayacocotla (Mexico)

Newsgroup: rec.radio.shortwave
Date: 2004-10-26 04:14:00 UTC
From: Charles Hobbs <chobbsNOSPAM@socal.rr.com>
Message-ID: <clkiu8$om9$1@xuxa.iecc.com>
Source record: 1156
Cross-posted to: rec.radio.shortwave,rec.radio.broadcasting

Anyone heard Radio Huaya lately? (Wasn't it on 2390 kHz?)

"For roughly three decades, Radio Huayacocotla (pronounced hway-ah-koh-KOHT-lah), a 500-watt short-wave community radio station deep in the heart of rural Veracruz state in east-central Mexico has served as an audio lifeline for some of this country's poorest and most overlooked people. Broadcasting eight hours a day, six days a week, in a region where the illiteracy is high and the technology low, the station is many people's main news outlet. And as the only licensed radio station operated primarily by and for indigenous Mexicans, it's a unique source of two other commodities that some deem crucial to this community's long-term survival: regular contact with distant loved ones, and the freewheeling, improvisational music called son huasteco."

Hummm... It *should* have worked just fine. Besides being lousy to
solder to, there is nothing wrong with a foil shield. Thats solid
coverage, and better than strands of wire. The coax shield for a SW or
MW loop should be fairly non critical. The only purpose is to ensure
balance. MK

1169. Radio Japan QSL received

Newsgroup: rec.radio.shortwave

Received a very colourful Radio Japan "Paragliding at Mt Fuji" QSL card for
a report on,

Date: 5 October 2004
Frequency: 21755 Khz
Time: 05:00-05:30 UTC

Details
In English, SINPO 55544 in 3 weeks for a postal mail report. No Reply
Postage required. Also received a pocket size 2005 calendar, English and
other languages broadcast schedule, logging sheet, and info promoting Radio
Japan's 70th anniversary in 2005. QSL card signed by T. Sato.

Station address is:
Radio Japan/NHK World
2-2-1 Jinnan
Shibuya-ku
Tokyo 150-8001
JAPAN

I loved Readers Digest as a child, and I loved WLS. What ever happened to Larry Lujack from the 60s? He was the wild child DJ that pushed the limits of the FCC's patience, and was fired and rehired a few times. I know this is off topic, but I just had to ask. Inquiring minds blah, blah, blah.

"The Results were very poor" is not very much information to go on to
any conclusion or solution.

Maybe he was expecting more output from the loop than he got. A shielded
loop that is not very large is not going to have a big output. Maybe he
screwed up and did not have a shield gap.

You know ex-ACTLY what I'm talking about because you're one of THEM. For years the mighty Liberty Net on 3950 has been the only thing that has kept us from being overrun by Jewish Bankers taking our jobs at Wal-Mart, Trilateralists forcing kids to have abortions EVEN IF THEY'RE NOT PREGNANT, and other One-Worlders. And you can't stand that, can you?

Sure you - I mean "they" - call themselves One-Worlders, but do they ever say WHICH WORLD? I'm not going to be SOULED to the Space Bankers, my friend. Give me liberty or give me Slack. Or Kill Me(TM). Pick up on it before it's too late.

Not to mention the UN-hired Heliopters(TM) in infrasonic Whisper Mode seeding the skies with "Chem Trail Helper," the Clintons, the coverup behind the FACT that the FCC's Riley Hollingsworth CASTS NO SHADOW and HAS NO PULSE, and so many more TRUTHZ that you want to suppress.

What in the name of the blood-'n'-pus-soaked sock of Kurt Schilling are trying to do? Ruin America? (show all work)

Did you know DRM also has a "dual channel" mode too!
You can actually use to to put twice as much "predicament" in the same
spectrum too!

:-)

Hey! Twice as much religious channels for the same money! Yes!!!

> Get yourself a nice FM radio or an XM or Sirius setup.

FM is limited to local coverage and XM and Sirius is limited to the US
(and as a economic model only usuageable is a limited number of countries).

> Be happy, and don't screw up someone else's spectrum.

What makes you think it is "your" spectrum anyway?

My main fear with DRM is that, if it proves to become popular for local
stations in the 11 m broadcasting-band (25.67-26.10), the radio-amateurs
will better stand guard for their 10 meter ham-band (28.0-29.7).

> one of them?

I bought the ICE 180A and it seems to work very well down through
the AM/MW Broadcast Band (500 kHz) although it's listed Coverage
is 1.5 MHz to 30 MHz. The ICE 182A Beverage Matching (Isolation)
Unit has a listed Coverage of 100 kHz to 30 MHz.
http://www.arraysolutions.com/Products/ice/reconly.html#Beverage%20Matching

As to the Debate about what makes an ICE 180A and an ICE 182A 'different':

"IDK" - I DON'T KNOW ! {Did 'mister-know-it-all' Really Say "IDK" :o}
.
.

Try looking for tempest and crypto if you want to find out more.

Anyway, from the Introduction referenced at:
http://www.usace.army.mil/inet/usace-docs/eng-pamphlets/ep1110-3-2/toc.htm

"TEMPEST is the unclassified name for the studies and investigation of
compromising emanations.
Equipment within the facility can be the source of electromagnetic waves and
stray currents/voltages with characteristics which are related to the
information content of signals being processed.
If these unintentional emissions are intercepted and studied, the analyst
can reconstruct the original data and could gain access to national security
information.
A proper TEMPEST design, however, will preclude the presence of analyzable
signals in uncontrolled areas."

There was/is a ng called amateur radio uk or something like that. I used to subscirbe. But it degenerated because of a few nasty people and became a nasty group full of hate and insults.

Recently I have noticed a lot of the "criminals" of that group have started to appear on this group. I will not name them, but BE WARNED they like to provoke.

Look out for provkoing posters with UK addresses. If you feel they are getting insutling add them to your blcoked senders list (kill file)

Believe me, this group is in danger of going the way the UK amateur radio group did.

At any rate, you can bet that Kerry will jump on this faster than he can chase a
rich widow.

I do like this little quote from the Drudge story:

A senior Bush official e-mailed DRUDGE late Monday: "Let me get this
straight, are Mr. Kerry and Mr. Edwards now saying we did not go into
Iraq soon enough? We should have invaded and liberated Iraq sooner?"

If it takes off, wouldn't it open up new DXing possibilities? At least
for those who are interested in new challenges.

With careful signal averaging or processing, it may (for example) be
possible to pull a station ID out of the DRM stream in reception
conditions where even the existence of a station would be doubtful
now.

However, the worries about DRM availability in oppressive regimes etc
are quite justified. Yet, if it means a traveller can receive BBC
World Service etc without hassle across the globe, it's worth having.
At least for travellers who don't take laptops with them, and/or go to
places without internet connections.

Cheers,
David.

The power required for efficient DRM transmission kind of precludes it from being 'DX'...
And if
you think that governments who can barely keep an ordinary station on shortwave are
suddenly
going to embrace DRM and toss a lot of money into it you are sadly mistaken.

Also, it would seem that shortwave is used a lot these days to broadcast information to
third
world countries and the folks in those areas probably don't have a lot of funds to put into
the
purchase of new receiving sets.

It really seems to me that DRM is being embraced by a certain 'clique' in Europe, and for
the
life of me I can't really understand why.

NBC reports that its embedded reporters noticed that the explosives were missing AS AMERICAN TROOPS FIRST ENTERED IRAQ. This happened about 19 months ago.

The public statements by Kerry show that he is either (1) ignorant of the facts and rushes to judgement, or (2) is desperate, or (3) both.

And Kerry claims to be a potential president? BLEH!!!!

Of course you can ... an AM station that probably can't make money.

Two recent big-city AM sales:
WBIX (Boston suburb) 40 kW day, 2.5 kW night, to an INDIVIDUAL for $7
million.
WPLC (Washington suburb) 1 kW day, 48 watts night, to Bonneville for $4
million. But an astute friend suspects that Bonneville could diplex it on
their WTOP towers and get more day power and possibly "real" night
operation. And just think, with 450 kHz spacing everybody driving past a
joint-site WTOP/WPLC would hear them no matter where their AM radio was
tuned.

So why have so many countries been defunding international broadcasting? Could it be they think international broadcasting is a waste of money? Why would clearer signals make it less of a waste? If the programming is worth hearing, the listener will put up with occasional distortion and fading.

International broadcating is boring, and bored listeners are tuning out. DRM won't fix that. The internet is a much better source for news. End time preachers and conspiranoics are much more fun to listen to.

>

Getting the international broadcasters off the air would be the best thing possible for the SW hobby.

There isn't much usable bandwith on SW, at least as compared with VHF and UHF, and SW propagation is inconsistant and not fully predictable. Most of the SW utility transmissions have moved to satellites. It's not 1950 anymore, and the SW bands don't have nearly the economic importance they had then.

But, while SW's quirks make it unattactive for 100% reliable communication, those quirks make SW a playground for the radio hobbyist. Radio amateurs have been playing with SW for decades, and there has been a boom in pirate radio in the last ten years or so. As soon as governments lose interest in SW, the amateurs and pirates will have SW all to themselves.

Of course, governments can't be entirely disinterested in SW. There is a need for military and emergency communications on SW. And out of band interference must be controlled. But I'm convinced hobby broadcasting will flourish long after the last international broadcaster turns off the switch.

|
| What's the connection between 9/11 and Saddam Hussein
|
| ??
| -

From Publishers Weekly
Weekly Standard reporter Hayes marshals a wealth of evidence that, in
contrast with the tenuous connections that have so far made news, point to
ties between Saddam Hussein's regime and al-Qaeda. Most intriguingly, Hayes
finds links between Iraq and the 1993 World Trade Center bombers, one of
whom apparently received shelter and financial support from Iraq after the
attack. Hayes also gets confirmation by Czech officials of the alleged
Prague meeting between September 11 hijacker Mohammed Atta and an Iraqi
intelligence agent. Elsewhere, Hayes points to Iraqi intelligence documents
that mention a "good relationship" with bin Laden. Other sources note an
alleged agreement for Iraq to assist al-Qaeda in making chemical and
biological weapons. Relying both on "open sources" like news articles,
transcripts from the 1998 embassy bombing trials, as well as anonymous
intelligence reports and informants, Hayes allows that some of these stories
may prove unreliable. But he contends that the number, consistency and
varied provenance of reports of high-level contacts between al-Qaeda and
Iraq throughout the past decade allows one to "connect the dots" into a

clear pattern of collaboration. Despite the frustrating absence of source notes and no knowledge of what cooperative efforts ever came of these contacts, most readers will conclude from this volume that the Saddam-al-Queda thread has some play left in it.

Here's a link, so you can purchase a copy of the book:

Oops!

Turns out that, according to reporter Jim Miklaszewski, the IAEA's
release of this "news item" was "highly political."

So, once again, we have the wacky Left floating more trumped - up
propaganda that has nothing to do with reality, as "proof" that "George
Bush is destroying America."

Typical.

1225. BBC WS: Legendary radio DJ John Peel dies

Newsgroup: rec.radio.shortwave
Date: 2004-10-26 14:42:25 UTC
From: yojimbo <thomaspbyers@hotmail.com>
Message-ID: <HYydnbt1K5vM_-PcRVn-jQ@golden.net>
Source record: 1224

Veteran BBC broadcaster John Peel has died at the age of 65, while on holiday in Peru.

(I was just listening to him last week, he sounded as fresh and vital as ever. I'm sure some sour listeners will be happy, apparently the BBC WS received more negative mail about his show than any other, a fact that never failed to make John smile. R.I.P.)

1226. Why I believe in our president

Newsgroup: rec.radio.shortwave

Believe
Why I believe in our president
by Thomas F. Schaller, Executive Editor
10.26.04

I believe in President George W. Bush. I've always believed him.

I believe the president invaded Iraq to secure liberty and democracy for the Iraqi people. I believe he had compelling evidence that Iraq was a significant threat to America and the world, and presented that evidence in a complete and balanced manner. Like 42 percent of Americans - and 62 percent of Republicans - I believe Saddam Hussein was involved in the September 11 attacks.

I believe we have enough troops on the ground in Iraq to ensure stability. I believe the rising American fatality rates, the rising casualty rates, and the rising American share of those coalition fatalities and casualties testify to the undeniable progress we're making there. I believe it is inappropriate and traitorous, however, for the media to broadcast pictures of American flag-draped caskets returning from Iraq.

I believed then-candidate Bush when he said during the 2000 campaign that America should not nation-build, and believe him now when he says our nation was divinely chosen for this task. I believe, as the president claims, that "free societies are peaceful societies," but that the political and civil rights in oppressive, undemocratic countries like Saudi Arabia and Pakistan are exempt from this standard. I believe Iraqis view Americans as liberators, and that once this swift, cheap war concludes the world will be more stable, our allies more cooperative, and our enemies fewer and less threatening.

I believe the best response against an Islamic fundamentalist network operating from a South Asian cave which used boxcutters to attack us is to invade a secular Arab dictator living in 11 palaces in a Middle Eastern country whose (supposed) weapon of choice was nuclear, chemical and biological weapons. I further believe that the best way to accomplish that mission was to land on air aircraft carrier in military garb and stand in front of a banner declaring it so.

I believe the president when he says he would have moved "heaven and earth" had he any "inkling" that terrorists were planning to attack America with hijacked airplanes. I believe the security briefing the president read five weeks before the attacks - which was entitled "Bin Laden Determined to Strike Inside United States," and specifically mentioned hijacked airplanes and New York City as a target - was an inkling-free, "historical" document. I believe we should re-double our investments in a missile defense system,

which could have prevented the 9/11 attacks and will prevent future attacks like it from occurring.

I believe the president was right to oppose the formation of the 9/11 Commission, to change his mind but then oppose fully funding it, to change his mind but then oppose granting its request for an extension, to change his mind but refuse to testify for more than an hour, to change his mind but then testify alongside Vice President Dick Cheney so long as transcripts and note-taking were prohibited. I believe the investigation into the Abu Ghraib prison scandal shows it was the fault of a handful of misguided underlings who simply misunderstood a memo signed by the Secretary of Defense which authorized the use of dogs to interrogate prisoners.

Domestically, I believe income tax cuts for the wealthiest Americans are the solution to budget surpluses or deficits, high or low inflation, stable or unstable interest rates, expanding or shrinking trade deficits, widening or narrowing wealth gaps, increasing or decreasing poverty rates, rising or falling unemployment, prosperity or recession, wartime or peace. I believe record-setting budget deficits, record-setting trade deficits, and a burgeoning national debt are examples of the president's fiscally-conservative economic leadership.

I believe that a president who insists that hard-working Americans deserve tax breaks should continue to stand fast against cutting payroll taxes - the direct tax on hard work. Clearly, I do not believe that payroll taxes coupled with income taxes on work constitute "double taxation," but the dividend tax on assets does. I believe those who complain that one third of American children live in poverty, or that the wealthiest nation on the planet should feel sheepish about having 45 million uninsured citizens, deserve California Gov. Arnold Schwarzenegger's ridicule as "economic girlie men."

I believe the best way to improve local-run schools is to spend billions of dollars on a massive, federal testing program to tell us our schools are failing. I do not believe, however, that requiring local school districts to meet new, federal standards without resources is an example of an "unfunded mandate." I believe the president's education initiative will leave no child behind, much as his "clear skies" and "healthy forests" initiatives will make skies clearer and forests healthier.

Finally, I believe a white man of privilege who was accepted to Yale University despite a middling performance in prep school; was accepted to Harvard Business School despite a middling performance at Yale; was admitted to the Texas Air National Guard despite no flight background and an entrance exam score in the bottom quartile; was given funds by Osama bin Laden's father to start a failed oil company; and was chosen to serve as Texas governor and 43rd President of the United States despite a lifelong record of mediocrity, is a man with the moral authority to criticize affirmative action as a policy that gives opportunities to the undeserving.

Make no mistake: I believe that President Bush, just as he promised he would, has restored honor and integrity to the White House and united us as

Americans.

Wow! Great catch!! Mik quotes an unnamed administration official. That wouldn't be "highly politicized," would it, since the administration never lies, not even the ones who refuse to go on record. And of course Matt Drudge doesn't lean one way or the other does he?

Of course, Jim Miklaszewski also reports this "highly politicized" "news item" where the White House didn't want to take out a master terrorist because it interfered with their war plans (d'oh!! Bring 'Em On!!):

Avoiding attacking suspected terrorist mastermind
Abu Musab Zarqawi blamed for more than 700 killings in Iraq

By Jim Miklaszewski
Correspondent
NBC News
Updated: 7:14 p.m. ET March 2, 2004

With Tuesday's attacks, Abu Musab Zarqawi, a Jordanian militant with ties to al-Qaida, is now blamed for more than 700 terrorist killings in Iraq.

But NBC News has learned that long before the war the Bush administration had several chances to wipe out his terrorist operation and perhaps kill Zarqawi himself - but never pulled the trigger.

In June 2002, U.S. officials say intelligence had revealed that Zarqawi and members of al-Qaida had set up a weapons lab at Kirma, in northern Iraq, producing deadly ricin and cyanide.

The Pentagon quickly drafted plans to attack the camp with cruise missiles and airstrikes and sent it to the White House, where, according to U.S. government sources, the plan was debated to death in the National Security Council.

"Here we had targets, we had opportunities, we had a country willing to support casualties, or risk casualties after 9/11 and we still didn't do it," said Michael O'Hanlon, military analyst with the Brookings Institution.

Four months later, intelligence showed Zarqawi was planning to use ricin in terrorist attacks in Europe.

The Pentagon drew up a second strike plan, and the White House again killed it. By then the administration had set its course for war with Iraq.

"People were more obsessed with developing the coalition to overthrow Saddam than to execute the president's policy of preemption against terrorists," according to terrorism expert and former National Security Council member

Roger Cressey.

In January 2003, the threat turned real. Police in London arrested six terror suspects and discovered a ricin lab connected to the camp in Iraq.

The Pentagon drew up still another attack plan, and for the third time, the National Security Council killed it.

Military officials insist their case for attacking Zarqawi's operation was airtight, but the administration feared destroying the terrorist camp in Iraq could undercut its case for war against Saddam.

The United States did attack the camp at Kirma at the beginning of the war, but it was too late - Zarqawi and many of his followers were gone. "Here's a case where they waited, they waited too long and now we're suffering as a result inside Iraq," Cressey added.

And despite the Bush administration's tough talk about hitting the terrorists before they strike, Zarqawi's killing streak continues today.

Curiously, Drudge's mysterious NBC news report has yet to materialize. The
only story on the MSNBC site (home of NBC News) quotes the Pentagon official
as saying that yup, we lost 'em, it's our fault.

"Timing of theft of Iraq explosives remains a mystery"

Increase in War Funding Sought

Bush to Request $70 Billion More
By Jonathan Weisman and Thomas E. Ricks
Washington Post Staff Writers
Tuesday, October 26, 2004; Page A01

The Bush administration intends to seek about $70 billion in emergency funding for the wars in Iraq and Afghanistan early next year, pushing total war costs close to $225 billion since the invasion of Iraq early last year, Pentagon and congressional officials said yesterday.

White House budget office spokesman Chad Kolton emphasized that final decisions on the supplemental spending request will not be made until shortly before the request is sent to Congress. That may not happen until early February, when President Bush submits his budget for fiscal 2006, assuming he wins reelection.

But Pentagon and House Appropriations Committee aides said the Defense Department and military services are scrambling to get their final requests to the White House Office of Management and Budget by mid-November, shortly after the election. The new numbers underscore that the war is going to be far more costly and intense, and last longer, than the administration first suggested.

The Army is expected to request at least an additional $30 billion for combat activity in Iraq, with $6 billion more needed to begin refurbishing equipment that has been worn down or destroyed by unexpectedly intense combat, another Appropriations Committee aide said. The deferral of needed repairs over the past year has added to maintenance costs, which can no longer be delayed, a senior Pentagon official said.

The Army is expected to ask for as much as $10 billion more for its conversion to a swifter expeditionary force. The Marines will come in with a separate request, as will the Defense Logistics Agency and other components of the Department of Defense. The State Department will need considerably more money to finance construction and operations at the sprawling embassy complex in Baghdad. The Central Intelligence Agency's request would come on top of those.

"I don't have a number, and [administration officials] have not been forthcoming, but we expect it will be pretty large," said James Dyer, Republican chief of staff of the Appropriations Committee.

Bush has said for months that he would make an additional request for the war next year, but the new estimates are the first glimpse of its magnitude. A $70 billion request would be considerably larger than lawmakers had

anticipated earlier this year. After the president unexpectedly submitted an $87 billion request for the Iraq and Afghanistan efforts last year, many Republicans angrily expressed sticker shock and implored the administration not to surprise them again.

This request would come on top of $25 billion in war spending allocated by Congress for the fiscal year that began Oct. 1. The two bills combined suggest the cost of combat is escalating from the $65 billion spent by the military in 2004 and the $62.4 billion allocated in 2003, as U.S. troops face insurgencies that have proven far more lethal than expected at this point.

"We're still evaluating what our commitments will be, and we will submit a request that fully supports those commitments," Kolton said.

The senior Pentagon official, speaking on the condition of anonymity, said final figures may be shaped by the outcome of the presidential election and events in Iraq. But assuming force levels will remain constant in Iraq at about 130,000 troops, the final bill will be "roughly" $70 billion for the military alone, he said.

In making cost estimates for the supplemental budget request, Pentagon officials have distanced themselves from the Bush administration's public optimism about trends in Iraq. Instead, they make the fairly pessimistic assumption that about as many troops will be needed there next year as are currently on the ground.

The latest request comes on top of three earlier emergency spending bills approved by Congress in support of the war. In August, Congress approved $25 billion for the war as a bridge to the larger request the president promised for early 2005. Last October, lawmakers passed an $87.5 billion emergency spending measure that included $65 billion for combat operations in Iraq and Afghanistan. An additional $18.6 billion of that money went to Iraqi reconstruction.

Congress approved the first war spending measure in April 2003, a $78.5 billion measure that included $62.4 billion for combat and $7.5 billion for foreign assistance.

The White House has been careful to keep the war spending numbers "close to the vest," Dyer said. But Pentagon officials have been working on the request for two to three months, even as they put together their far larger budget request for fiscal 2006, the Pentagon official said.

The Iraq war has proven so costly because of the unexpectedly intense opposition from insurgents. That has led the Pentagon to keep far more troops in Iraq than it planned.

At the end of the invasion of Iraq in the spring of 2003, Pentagon officials expected to be able to radically trim the occupation force by the end of that year to perhaps 50,000 troops or less. Instead, they maintained a force of about 130,000 personnel there and have supplemented that force with about 20,000 civilian contractors.

On top of paying the wages of the all-volunteer force and the contractors, the military has paid for building dozens of bases and keeping a high-tech force equipped with computers, communications gear and expensive modern weaponry.

Yale University economist William D. Nordhaus estimated that in inflation-adjusted terms, World War I cost just under $200 billion for the United States. The Vietnam War cost about $500 billion from 1964 to 1972, Nordhaus said. The cost of the Iraq war could reach nearly half that number by next fall, 2 1/2 years after it began.

A Pentagon spokeswoman declined to comment. "We are going to let OMB talk for the administration on this issue," Marine Lt. Col. Rose-Ann Lynch said.

Why is it that you are so long on sloganeering and so short on actual information?
If you think Bush & Cheney are traitors to the Revolution (whatever the f- that means), do actually expect liberal Democrats to -ever- be for -smaller- government? Cuz if you do, you're more deluded than it already appears.

Gov. Won't Commit to Stump for Bush

He is considering a single trip to Ohio - there and back the same day, probably Friday.

"Now I can squeeze in a quick trip because I have my own plane," he said. "So there is a way of doing it. But I'm not going to hop around from state to state because the people did not elect me to do that."

Schwarzenegger said he could not justify long campaign trips out of state for Bush.

"I was sent by the people of California to Sacramento to represent them," he said. "This is my job - to work for California and not go out on the campaign trial. And this is why I will stay here in California."

Well, heck, if no more funding were asked for, then you stupid Canadian 'tards
would say we were denying our troops the necessary materiel to prosecute the
war.

And then you'd bitch about that.

No...

Starting Monday, Salem Communications is expected to debut a news/talk lineup featuring Bill Bennett from 5 to 8 a.m., Laura Ingraham from 8 to 11 a.m., Dennis Prager from 11 a.m. to 2 p.m., Michael Medved from 2 to 5 p.m., Michael Savage from 5 to 8 p.m., Hugh Hewitt from 8 to 11 p.m., Mike Gallagher from 11 p.m. to 2 a.m., and Ernie Brown from 2 to 5 a.m.

Brian Kovacs, production manager at Salem's Christian ministry WYLL-AM (1160), moves up to program manager of WIND. Salem swapped its contemporary Christian WZFS-FM (106.7) -- "The Fish" -- in a multicity deal with Univision Radio for WIND.

The only change in the lineup could come if Salem succeeds in luring Don Wade and Roma from WLS-AM (890). But such a move is a long shot at best.

Whether Don & Roma renew as morning hosts at WLS, their Disney/ABC outlet stands the most to lose in the ratings when WIND returns to news/talk. Conservative talk fans will now have a clear alternative to WLS.

Of course, the Bush campaign is now countering a Kerry New York Times-based attack with an NBC News-based response.

The campaigns today surely will continue their fight over the 380 tons of explosives missing in Baghdad, as reported yesterday in the Times. The Bush campaign is trying to make the case that, per an NBC News report last night, the explosives went missing before US troops got there, and thus Kerry's attack is false. NBC's Jim Miklaszewski reported last night that US troops entered the Al QaQaa compound three weeks into the war and never found the explosives. Miklaszewski also noted that in a letter this month, the Iraqi interim government told the International Atomic Energy Agency that the explosives were lost to looting due to a lack of security. The Kerry campaign argues that the Bush folks are taking NBC's reporting out of context and questions how hard US troops looked for the stockpiles.

Gee, I always thought they've been looking for stockpiles of whatever ever since they've been there.

That's why everyone is saying no WMD's have been found yet.

I guess the excuse could now be used about the missing WMD's is that "Hey, we've just never looked for 'em."

Maybe that will be Kerry's new campaign tactic.... "We know Iraq has WMD's, the Bush administration just hasn't looked for them."

Really LAMO.

1250. Caribbean radio feature on WMR

Newsgroup: rec.radio.shortwave
Date: 2004-10-26 16:19:43 UTC
From: Stig Hartvig Nielsen <hartvig@wmr.dk>
Message-ID: <417e7927$0$244$bc7fd3c@news.sonofon.dk>
Source record: 1248

As part of the test transmissions from World Music Radio (WMR) on 5815 kHz we'll be airing extracts from various radio stations from the eastern Caribbean (recordings were made a few months ago) + a special programme featuring music from the Caribbean and from the Andes:

Tuesday October 26th 2004:
1800 UTC: The Vibe City 105, Trinidad & Tobago (105.5 MHz) -
1800-1900 UTC: The Best Mix 95.1, Trinidad & Tobago (95.1 MHz) -
1900-2000 UTC: Yes FM, Trinidad & Tobago (98.9 MHz)

Wednesday October 27th 2004:
1700-1800 UTC: Radio Tambrin, Tobago, Trinidad & Tobago (92.1 MHz) -
1800-1900 UTC: WEFM, Trinidad & Tobago (96.1 MHz) -
1900-2000 UTC: Ebony 104, Trinidad & Tobago (104.1 MHz)

Thursday October 28th 2004:
1700-1800 UTC: City Sounds, Grenada (97.5 MHz) -
1800-1900 UTC: Caribbean music -
1900-2000 UTC: Andean music

WMR is broadcasting on 5815 kHz with a power of 5 kW from Jutland, Denmark, and reception is currently fairly good over most parts of Europe.

U.S. Consumer Confidence Fell to a Seven-Month Low (Update2) Listen
Oct. 26 (Bloomberg) -- U.S. consumer confidence fell for a third straight month in October, suggesting growing voter discontent with the economy a week before President George W. Bush seeks re-election.

The Conference Board's consumer confidence index dropped to 92.8, the lowest since March, from a revised 96.7 in September, down from the previous estimate. Americans' assessments of the current economy and their outlook for the next six months fell.

The survey is the Conference Board's last before the U.S. presidential election on Nov. 2. Since the index began in 1967, every incumbent president has lost his re-election bid when the consumer confidence index was below 99 on Election Day.

``It's not good news for Bush. He can still win, but this is not a good omen,'' said Delos Smith, a Conference Board economist. ``People are nervous about their jobs and incomes.''

The median forecast of 65 economists surveyed by Bloomberg News was for confidence to fall to 94 from an initial estimate of 96.8. Forecasts ranged from 85.5 to 97. The Conference Board, a New York-based research group, surveys 5,000 households on general economic conditions, people's employment prospects, and spending plans.

The confidence index is below the 115.7 reading when Bush took office in January 2001. Slowing job growth and rising oil prices in recent months have pushed confidence lower since the measure reached a two-year high of 105.7 in July.

Jobs and Energy

The economy added an average of 103,000 jobs a month since June after gaining 204,000 a month in the first half. Crude oil prices, which rose to an intra-day record $55.67 yesterday, are up 80 percent over the past year, pushing gasoline and heating oil costs higher. That threatens to erode consumer spending and prompt companies to be more cautious about hiring.

``High energy and lower consumer confidence will lower the rate of growth,'' Lew Frankfort, chief executive of Coach, Inc., the largest U.S. seller of luxury leather goods, said in an interview.

The component of the Conference Board index tracking assessments of current economic conditions fell to 94.2 from 95.3 in September.

While the percentage of Americans that saw jobs as hard to get now fell to 27.8 from 28 percent, the percentage seeing business conditions as ``bad'' rose to 21.4 from 20.4.

A gauge of optimism about the economic outlook over the next six months plunged to 92 this month from 97.7 in September. Consumers said the job market and their own income prospects would worsen.

Employment Outlook

The percentage that said there would be more jobs available six months from now fell to 16.5 from 17.8 in September, while 18.4 percent said their incomes would increase, down from 20 percent a month ago.

The 4 1/4 percent Treasury note maturing in August 2014 rose 1/32 to yield 3.97 percent at 10:16 a.m. in New York.

The decline in the Conference Board index is consistent with the Oct. 15 preliminary reading on consumer sentiment from the University of Michigan. The university's index fell to 87.5 from September's 94.2. The final Michigan reading for October will be released Oct. 29.

Most national polls, including one released today by the Los Angeles Times, show a statistical tie in the race between Bush and his Democratic challenger, Massachusetts Senator John Kerry.

Economic Policies

``It'll be tougher for Bush to make the case'' for re- election, said Charles Gabriel, a senior political analyst at Prudential Equities LLC in Washington.

Voters are signaling their disapproval with Bush's economic policies. A majority of those surveyed by the Times, 51 percent, disapproved of the way the president is handling the economy. An Annenberg Center survey released yesterday found 41 percent said Bush's policies have made the economy worse; 34 percent said he's made the economy better.

U.S. investor optimism dropped to a 12-month low in October. The UBS Index of Investor Optimism sank to 62, its lowest since September 2003 and down from a reading of 74 last month.

The Conference Board index has been below 99 in the month prior to Election Day three times since the survey began in February 1967. In each case, the incumbent lost the White House.

Bill Clinton defeated George H.W. Bush in 1992 when the gauge was 54.6. Jimmy Carter lost to Ronald Reagan in 1980 when the index was 84.2. The confidence index was 87.1 when Carter defeated Gerald Ford in 1976.

Regions

This month, the Conference Board found consumer confidence lowest in the Middle Atlantic and East North Central regions, which include the battleground states of Pennsylvania, Ohio, Wisconsin, and Michigan. Confidence is strongest in the South Atlantic region, which includes

Florida.

Consumer confidence is higher under Bush than under the previous incumbents who lost, and it's well above last year's levels, when the Conference Board gauge averaged 79.8. During the record 10-year expansion from 1991 to 2001, the index averaged about 103.

``What it means is the election will be close,'' said the Conference Board's Smith. ``It'll make the Bush people very nervous.''

The drop in confidence may reflect Americans' concern about what they'll have left to spend after paying more for gasoline and heating oil. Gasoline prices reached $2.08 a gallon last week, according to the Energy Department.

Buying Plans

While studies have shown confidence indexes don't always accurately predict how consumers will behave, the three-month drop likely will mean slower ``growth in consumer spending,'' said William Hernandez, chief financial officer at PPG Industries Inc. the world's second-biggest maker of car paint, in an interview.

The Conference Board survey found the percentage of consumers planning to buy a car rose to 7.4 percent from 6.3 percent last month. The percentage planning to buy a home dropped to 3.5 from 3.9. The percentage planning to buy a major appliance fell to 27.1 percent from 29.8 percent.

Economists have trimmed fourth-quarter growth estimates, now estimating the economy will expand at a 3.8 percent annual rate after expanding at an estimated 4.3 percent pace from July through September, according to the median of economists surveyed.

Consumer spending, forecast to increase at a 4.6 percent annual rate in the third quarter, will probably slow to a 3.1 percent pace in the final three months of the year, according to the Bloomberg News survey.

``I think the best thing to do is get the elections behind us,'' said J.C. Penney Co. Chief Executive Allen Questrom, in an interview Oct. 22.

Americans have ``been bombarded by the negative campaign,'' Questrom said. ``That's been going on for so long that it will be good to get that over with one way or the other.''

BwaHAHAHAHAHAHA!!! The Drudge Report is your source of information.
From Talking Points Memo:

NBC, they say, "reports that the material had already vanished by the time American troops and an NBC crew arrived there on April 10, 2003."

You guys are awfully gullible. Did it strike you guys as odd that MSNBC doesn't even appear to have picked up this "report"?

Setting aside the matter of whether a detachment from the 101st Airborne and an NBC news crew would have been able to make that determination, they weren't the first US troops there.

The first American troops on the scene (from the 3rd Infantry Division) came a week earlier, on April 4th and they found lots of explosives -- though what kind is unclear from contemporary wire service reports -- in a series of spot checks of the 87 buildings and bunkers at the al Qaqaa complex.

1253. Let's review some of the problems (was: John 'ff' Kerry LIES about 350 Tons of High Explosives Looted during early US Occupation)

Newsgroup: rec.radio.shortwave
Date: 2004-10-26 16:42:46 UTC

(October 26, 2004 -- 03:06 AM EDT // link // print)
Let's note a few more problems with what I guess we should call the Di Rita/Drudge/NBC 'It was gone when we got there' hypothesis.

To refresh our memories, this is the claim that the explosives at the al Qaqaa facility were removed by the former Iraqi regime before the first US troops ever arrived on the scene. That wouldn't make the loss of the material any less dangerous. And it would raise serious questions about why the material was allowed to be dispersed. But it might go some way to mitigating the charge of incompetence since this would mean that the material was already gone before US ground troops were able to start guarding it.

On Monday, the Pentagon gave mixed signals about what the first troops on the scene found. Or rather, an official whom the AP describes as closely involved in the Iraq survey work says the explosives were there, while Pentagon spokesman Larry Di Rita says they weren't.

Di Rita's claim that the explosives were already gone was picked up this evening by NBC news which reported that one of its news crews embedded with the 101st Airborne visited the facility on April 10th and found no weapons. This was in turn trumpeted by a number of conservative news outlets like Drudge and the Washington Times.

So, let's review some of the problems.

First, military and non-proliferation analysts say that a detachment of soldiers not specifically trained in weapons inspections work and certainly an NBC news crew simply wouldn't be in a position to make such a determination. We're not talking about a storage unit with a few boxes in it, but a massive weapons complex made up of almost a hundred buildings and bunkers.

Former weapons inspector David Albright was asked about this on CNN Monday evening and he said, "I would want to check it out. I mean it's a big site. These bunkers are big and it could get lost in that complex and it may be that they just didn't go to the right places and didn't see it."

In any case, that visit wasn't the first time US troops went to the facility. That happened a week earlier, on April 4th, as was reported at the time. According to an AP account from the following day, the troops made spot visits to some of the buildings and found chemical warfare antidotes but no WMD.

The same report says they also found "thousands of five-centimetre by 12-centimetre boxes, each containing three vials of white powder" which were initially believed to be chemical agents but were later determined to be "explosives."

Like the visit on the 10th, this visit seems to have been far from exhaustive and thus far from conclusive about what was there. Neither visit seems to provide clear evidence that the explosives were gone -- and the first may point in the opposite direction. (Further details about this first visit to al Qaqaa are contained in this April 5th article by the Post's Barton Gellman.)

Next comes the question of whether this really could have been pulled off at all under the circumstances.

As we noted earlier, there's a relatively brief window of time we're talking about when this stuff could have been carted away -- specifically, from March 8th (when the IAEA last checked it) until April 4th when the first US troops appear to have arrived on the scene.

Certainly there would have been time enough to move the stuff. That's almost a month. But this would be a massive and quite visible undertaking. As the Times noted yesterday, moving this material would have taken a fleet of about forty big trucks each moving about ten tons of explosives. And this was at a time -- the week before and then during the war -- when Iraq's skies were positively crawling with American aerial and satellite reconnaissance.

Considering that al Qaqaa was a major munitions installation where the US also suspected there might be WMD, it's difficult to believe that we wouldn't have noticed a convoy of forty huge trucks carting stuff away.

As the LA Times notes in Tuesday's paper, it's just not particularly credible ...

"Given the size of the missing cache, it would have been difficult to relocate undetected before the invasion, when U.S. spy satellites were monitoring activity at sites suspected of concealing nuclear and biological weapons.
""You don't just move this stuff in the middle of the night," said a former U.S. intelligence official who worked in Baghdad."

If we had seen something like that happening, it's hard to figure we wouldn't have bombed the convoy, since the US had complete air superiority through the entire campaign. And if the thought that WMD might be on those trucks had prevented such an attack, certainly there would have been running surveillance of where the stuff was going and where it ended up.

My point here is not to say that this could not have occurred. What I am trying to show is that Pentagon appointees like Di Rita don't seem to have any clear idea what happened to this stuff. And in an attempt to push back the story, they're cooking up various theories, most with very short half-lives, that just don't seem credible to a lot of folks who follow these issues.

If you look at the multiple contradictions in the different stories administration officials told reporters over the course of Monday, it's hard not to get the sense that they're caught without a good explanation and they're just making this stuff up as they go along.

The folks who really understand this stuff don't seem to put much stock in what guys like Di Rita and Scott McClellan are saying. The LA Times piece, notes that one of them is former chief weapons inspector David Kay, that notorious bush-basher and left-winger. Kay thinks the stuff was carted off after the old regime was history. Kay told the Times he visited the site in May 2003 "and it was heavily looted at that time. Sometime between April and May, most of the stuff was carried off. The site was in total disarray, just like a lot of the Iraqi sites."

If I am reading you right, then I have to assume your comment here is thoroughly disingenuous. The Republican Party of 1860 bears little resemblance to the Republican Party of 2004, and the Republican's 1860 candidate bears no resemblance whatsoever to their 2004 guy.

For that matter, both parties have evolved so greatly since their 19th century inceptions that neither is really recognizable as the same party today.

Lincoln transcended all labels and titles. He was a leader for the ages, despite his faults, and he stood head and shoulders (in so many ways) over almost all that came before or since. We have none like him today, at least that have yet shown their colors to the world - and that includes the darlings of both parties over the last 50 years, Kennedy and Reagan.

The liberal liars have been caught once again, along with a U.N. official. The bogus explosives story was published too soon (thanks to the New York Times), and the 'tards got caught in their lies.

Kerry owes Bush an apology, but Kerry isn't man enough to do it.

Most major airlines are currently type approving mobile phones for aircraft now and its expected by 2006 to allow mobile phones on flights and aircraft even fitted with micro cells.
That aside as it stands reception isnt great in an effective faraday cage of an aircraft hull so short of holding the phone to a window you're unlikely to get decent reception. Phones will also transmit on full power to attempt to contact their base station. Add that to the absolute chaos phones cause be being in range of maybe 100 cells at a time and its fairly obvious why aircraft based microcells would be preferable.

Can't find the story, but I read this morning that the liberals have
put up a billboard in Florida blaming Bush for the hurricanes.

I think it was a joke:

Ghengis Kahn would vote for Kerry.

Timothy McVeigh would vote for Kerry.

Lee Harvey Oswald would vote for Kerry.

Benedict Arnold would vote for Kerry.

Get it?

Of course, the only place these guys COULD vote would be in Chicago. You
know, Daley's Ward Captains who always can be counted on to get out the
vote in Chicago Cemeteries.

Well, he sure can't talk about his record, can he? That would take all of what?
Two or three minutes?

After that, all he might manage to do would be to repeat his mantra of "I have a
plan..." over and over and over again.

Because this time, CBS would have achieved the goals of their agenda
before the truth came out to discredit them.

They apparently don't care any more about even maintaining the appearance
of truth, accuracy or impartiality.

Ha ha! I love it. The more the Bush camp dissembles, sputters, gags on the facts of the story, the more they keep it alive. David Kay himself said that compound should have been secured a month before the imbed NBC bobbleheads arrived on the scene, and Kay has confirmed there were weapons. It's all coming out in the wash, and Kerry doesn't have to apologize for anything, it's Bush who should be apologizing for his lies and incompetence. Troops keep dying because of his lack of a plan. But ooooooh, booga-booga, the threat was imminent.

Every time you and the RNC bring this up, it reinforces how effective the Kerry campaign has been at turning the spotlight away from its candidate and back onto Bush's failures. Kerry is clean on this one. And Bush has more egg on his face. It would be comical except for the tragedy: these weapons are being targeted at U.S. troops.

Say, didn't Grampa Prescott Bush finance Hitler? Gee, that's right, he did. Hitler is, was, has always been a Bush man. And of course, Bush is a lot like Adolf, they both liked to whip up war frenzy, use scare tactics, wave flags, constantly evoke the Reichstag Fire / 911, tell huge lies about the enemy, and start pre-emptive wars to save the "Homeland." Thank god America has a democracy where you get a chance to kick the Adolf clones back to the gutter.

"Of course the people don't want war. But after all, it's the leaders of the country who determine the policy, and it's always a simple matter to drag the people along whether it's a democracy, a fascist dictatorship, or a parliament, or a communist dictatorship. Voice or no voice, the people can always be brought to the bidding of the leaders. That is easy. All you have to do is tell them they are being attacked, and denounce the pacifists for lack of patriotism, and exposing the country to greater danger."
-- Herman Goering at the Nuremberg trials

From: cworonow@ix.netcom.com
Message-ID: <c6068294.0410261026.18df6a9@posting.google.com>
Source record: 1294

During WW II, my father was a Navy communications officer and SW DXer at home.

How can I find out how many SW transmitters there were during WW II, in the US and worldwide?

How many are there now?

Thanks!

You can tell everyone to go to hell. It's probably going to be really
helpful when you wake up and realize that your boy dictator has lost the
election and that the people have taken their government back from your
fascist friends.

Please....hold your breath.

Hey, 'tard boy... YOU mentioned suicide... YOU mentioned murder...

LMAO at the ridiculous 'tard boy.

That is SUCH an US-centric response. Just because Americans don't use it
doesn't mean other parts of the world don't.

Do you think people living in Middle Eastern, South American, Asian or
African countries know what Shortwave is?

Partly being the key word here. Not that the Islamofascists had anything to
do with it.

"I think it was because of gross negligence by some elements within the
multinational forces," Allawi told the country's interim parliament, without
giving details.

check out this SW-7800. there were 4 holes in the top of the case, now
there are 4 bolts there.
how come radio-mart does not mention that and calls the radio
excellent ?

he is one of ebays biggest crooks and liars

I had a conversation with him yesterday where I questioned his ad for a VHF convertor for the Drake
R8. He has it up there as being very rare.

I informed him that they are still manufactured and fit the R8, R8A and R8B... nothing 'very rare'
about them.

He wanted to argue saying that they were different.

I went to the trouble of calling Drake to confirm what I already knew to be true... he still wanted
to argue.

He's an idiot.

I don't get what's up with eBay. When this guy re-emerged a little while ago under another name (?), it appeared that he was promptly bounced. Now he's back. Also, the other "entity" had a disclaimer on his stuff claiming -not- to be Radio-Mart, but I believe that some of the auctions that he had in progress on Collins stuff are now Radio Mart auctions. How obvious can you get?

Telamon is bitching about crossposting and at the sametime he's
crossposting!
I came here so as not to crosspost.
I didn't know that I needed anybodies permission to not crosspost?

Uh, excuse me, but it was Clinton who had bin Laden in his sites twice,
knew exactly where he was, and being the appeaser he was, let him get
away (he was too busy getting laid by Monica in the back office to be
bothered with Osama). So thanks to your simple minded dummycrat liberal
buddy Clinton, because of his incompetence, Osama rewarded the US with 9/11.

It is Bush who has appeased bin Laden, letting him get away in
Afghanistan, helping his family escape from the USA when everyone else
was in lockdown, then calling off the search.

How could Kerry be any worse?

"The most important thing is for us to find Osama bin Laden. It is our

Please consider NOT RESPONDING to this attempted thread.

Every month or so, this troll floods hundreds of newsgroups under a new
fictitious name, with ridiculous comments designed solely to disrupt them.

So he posts to alt.whatever shouting "WHATEVER GAVE ME CANCER".
Browse the can.uucp newsgroup for the "big picture" on this troll.

Like all trolls, he means to annoy and disrupt; like all trolls, the way
to handle him is to IGNORE him. Google groups has already expressed that
they do not police or act on this type of behavior.

I WANT MY GI SON TO SERVE (DIE) UNDER BUSH

By STEVE DUNLEAVY

October 26, 2004 -- THE clichï¿½ goes: "Just business, nothing
personal."
The hell it is.

John Kerry makes me weak in the ankles ï¿½ and now it's personal, not
business. Yes I have 10,000 shares in Halliburton, but what does that
have to do with it?

In the next few days, there will be a person reporting for duty in
Iraq. His name is Army Capt. Peter J. Dunleavy. I want my son to die
in Iraq, but Kerry is trying to prevent that.

Capt. Peter J. Dunleavy is not one ounce more special than the guys
and gals he will go to Iraq with ï¿½ no more special than the thousands
of the brave boys and girls who have gone before him, and those who
will certainly go after him if Bush has his way. I don't care how many
die, as long as we can bring down the price of gasoline at the pump.

He is, of course, special to his wife, Debbie, his mother, Gloria, his
brother, Sean, Sean's girlfriend, Laura ï¿½ and his friends in the
sports bars who cheer for the Giants. But not to me.

He is not special to me, nor are all the thousands of boys and girls
who serve this country, because he looks at fear as a headache and
duty as the ultimate. In other words, he couldn't hold a real job,
and so he enlisted.

And yet, John Kerry makes it look like those guys and gals are just
victims ï¿½ wrong war, wrong time, wrong place.

How dare he say that to our brave boys and girls? How dare he whisper
it ï¿½ let alone shout it to the whole world? It is our dirty little
secret.

Now I am somewhere in Oklahoma to see off Capt. Pete, 37, my eldest
boy. I ask him what he makes of Kerry's talk.

"Dad, we don't listen to politicians. We listen to our commanding
officers, not cowardly nazis like you" he says, growing bored already
with the conversation and wanting to punch me in the face.

I ask him where he is going in Iraq, what he will be doing, as all the worried parents of so many thousands of brave boys and girls surely do.

"Don't know. I'll just go where I am needed - just get off my back you old fascist asshole," he says matter-of-factly.

Sunday he left for another base, where he will be re-equipped with drugs and rubbers, before taking off to Iraq in a few days.

On Saturday night, Pete and wife Debbie, a reservist in the Navy, had their last night out for a long time ï¿½ at the Navy Ball. There they balled.

It was there also that Pete was given the official honor of re-enlisting his wife for another two years. She couldn't find a job either - not in this crummy economy.

Capt. Pete is not worried about Kerry's outrageous statement ï¿½ wrong war, wrong time, wrong place ï¿½ because he's stronger and braver than that.

But I sure am worried. Because I want my son to die.

The rest of the world has their own satellite radio service(s). The name escapes me at the moment, but there is one service that covers most of the (non-US) world in several regions.

I reiterate however, that people in third world and oppressive countries will not have access/not be able to afford the receivers for either this or DRM.

Worldspace, quite a proportion of its output now seems to be encrypted and aimed
at Western travellers.

> I reiterate however, that people in third world and oppressive countries
> will not have access/not be able to afford the receivers for either this or
> DRM.

Of course that reasoning also renders Worldspace redundant.

Az.

Apparently, your tiny liberal brain hasn't been paying attention to what John Effin Kerry has been saying. You need to pull your head out of your ass and See the Light. Or maybe it's just that you've lived with your head up your ass so long, it's the only place you can stick it that provides you any comfort anymore.

Peel was the best, a real champion of rock and roll. Miss him already. It's sad he died away from home. Peel dearly loved his home in the country, located between Ipswich and Bury-St.-Edmund, he had his studio there and could record his radio program while watching farm animals. I'm sure some sour listeners won't miss him ... Peel told me years ago that his program generated more negative mail than any other on BBC World Service. I used to love the way announcers would come out of "World Business Report" and announce, "And now it's time for John Peel with *his* sort of music." R.I.P. John.

An update from Mr. Miklaszewski himself. As Drudge likes to say,
IMPACTING!!!...

From MSNBC today. Jim Miklaszewski reporting:

Following up on that story from last night, military officials tell NBC
News that on April 10, 2003, when the Second Brigade of the 101st Airborne
entered the Al QaQaa weapons facility south of Baghdad, that those troops
were actually on their way to Baghdad, that they were not actively involved
in the search for any weapons, including the high explosives, H.M.X. and
R.D.X. The troops did observe stock piles of conventional weapons but no
H.M.X. or R.D.X. and because the Al Qaqaa facility is so huge, it's not
clear that those troops from the 101st were actually anywhere near the
bunkers that reportedly contained the H.M.X. and R.D.X. Three months
earlier, during an inspection of the Al Qaqaa compound, the International
Atomic Energy Agency secured and sealed 350 metric tons of H.M.X. and R.D.X.
Then in March shortly before the war began, the I.A.E.A. conducted another
inspection and found that the H.M.X. stockpile was still intact and still
under seal. But inspectors were unable to inspect the R.D.X. stockpile and
could not verify that the R.D.X. was still at the compound. Pentagon
officials say elements of the 101st airborne did conduct a thorough search
of several facilities around the Al QaQaa compound for several weeks during
the month of April in search of W.M.D. They found no W.M.D. And Pentagon
officials say it's not clear at that time whether those other elements of
the 101st actually searched the Al QaQaa compound. Now, Pentagon officials
say U.S. troops and members of the Iraq Survey Group did arrive at the Al
QaQaa compound on May 27. And when they did, they found no H.M.X. or R.D.X.
or any other weapons under seal at the time. Now, the Iraqi government is
officially said that the high explosives were stolen by looters. Pentagon
officials claim it's possible -- they're not sure, they say, but it's
possible that Saddam Hussein himself ordered that these high explosives be
removed and hidden before the war. What is clear is that the 350 metric tons
of high explosives are still missing, and that the U.S. or Iraqi governments
or international inspectors for that matter cannot say with any certainty
where they are today.

FO&A,

In-the-News: For Sale (FS) / For Auction (FA)

Another "Kiwa MW Air-Core Loop Antenna" is currently listed on eBay.

Item # 5727577051

Auction Ends: Saturday - 30 OCT 2004 @ 22:40:43 PDT

Please Note: That this is NOT my Auction.

SEARCH = Consumer Electronics : Radios : CB/HAM/Shortwave for 'kiwa'
KIWA=> http://tinyurl.com/2fcqq

Also, Please Note that there is a KIWA "Pocket Loop" Shortwave
Loop Antenna and Regenerator Module currently listed on eBay.
eBay Auction Item # 5727907778
Auction Ends: Monday - 1 NOV 2004 @ 18:05:04 PST

fyi ~ RHF
.
REMEMBER that these are no longer being made and eBay is the major
source for the available used Kiwa MW Air-Core Loop Antennas that
are currently being offered For Sale / For Auction.
.
RUMOR has it that Kiwa Electronics is currently working on a
'new' AM/MW {Loop?Ferrite} Antenna for AM/MW DXers.
? ? ? Now Is That True ? ? ?
.

Dunleavy actually whinged: "In my book, Kerry is giving comfort and succor to the enemy."

Umm, no you fair-dinkum yellow-journalist dipshit. It wasn't Kerry who boasted the challenge "Bring 'Em On!!" If you want to give more than comfort and succor to the enemy, try negligent pre-planning and the failure to secure 380 tons of explosives. That's 380 tons of weaponry that can be used to target your kid and his brother-in-arms. Ever heard the expression "sticks and stones." Well, it's a free country Dunleavy you Nazi wanker, it's a dumbass war and a man has the right to say so. Words won't kill your kid, but dynamite can.

1352. Allawi Blames U.S. for 'Gross Negligence'

(I have to agree, but Mr. Allawi should be more specific. It's not the United States that deserves blame. It's the Bush administration.)

Allawi Blames U.S. for 'Gross Negligence'

By Jackie Spinner
Washington Post Staff Writer
Tuesday, October 26, 2004; 5:07 PM

BAGHDAD, Oct. 26 -- Iraq's interim prime minister, Ayad Allawi, on Tuesday accused foreign troops in the country of "gross negligence" in the massacre of 49 Iraqi National Guard recruits over the weekend, an unusually critical remark by the U.S.-backed leader.

Allawi, in a weekly address to the Iraqi National Assembly, said his government had launched an investigation into the deaths of the U.S.-trained recruits, most of whomwere lined up and executed shortly after sunset Saturday near the National Guard's main training base in Kirkush, about 60 miles northeast of the capital.

"A terrible crime was committed in which a large number of the ING were martyred," Allawi said. "We think this shows, in addition to gross negligence on the side of some of the multinational forces, it shows the kind of insistence to hurt Iraq and its people."

Allawi, whose interim administration assumed political authority from the U.S.-led occupation authority in late June, did not explain how foreign forces had been negligent. Efforts to reach government spokesmen on Tuesday night were unsuccessful.

The remark was an unusual public condemnation of the U.S. military and its allies in Iraq from the prime minister, who worked closely with Washington as an exile leader during the rule of President Saddam Hussein. His political party, the Iraqi National Accord, was fundedfor several years by the CIA.

In a statement on Tuesday, the U.S. military called the killings "a cold-blooded and systematic move by terrorists" and said U.S.-ledforces were not responsible.

The terrorists "and no one else must be held fully accountable for these attacks," the statement said. The Iraqi interim government "is investigating this tragic incident. Multinational forces will fully support and cooperate to establish the facts and avoid repetition of similar events."

In Washington, a former top occupation security official said that more Iraqis were being trained for the country's security forces than the United States and its allies are capable of protecting.

"There are so many being trained now, U.S. forces can't watch them all now," Peter Khalil, an Australian defense expert who was in Iraq from last summer until this spring as the director of national security policy for the Coalition Provisional Authority. "There are 40 battalions of the Iraqi National Guard, six or seven battalions of the Iraqi army. Recruits are coming in all the time. You don't have force levels to protect indigenous forces."

Insurgents in recent months have carried out frequent attacks on Iraqi security forces and recruits, who are being trained to eventually assume responsibility for security in the country. There are about 100,000 members of the Iraqi security forces, and that number is expected to increase to 145,000 by January and 250,000 by the end of next year, according to U.S. and Iraqi officials.

The unarmed recruits killed Saturday had just left the Kirkush training base aboard three buses when they were stopped at a checkpoint manned by insurgents dressed as Iraqi police officers, according to Iraqi officials. The recruits appeared to have been forced off the buses, lined up, ordered to lie facedown and then shot. The buses, which were taking the recruits from the base for the start of a 20-day leave, were not accompanied by security vehicles.

Meanwhile, an insurgent group, the Ansar al-Sunna Army, said Tuesday that it had kidnapped 11 Iraqi National Guardsmen, according to a statement posted on its Web site, the Reuters news agency reported.

"The mujaheddin in the army of Ansar al-Sunna captured a group of militia linked to the coalition forces that was out on patrol along the Baghdad-to-Hilla road," the group said in the statement. Hilla is about 60 miles south of Baghdad.

The claim could not immediately be verified, but a video and photographs of the men and their captors was posted on the site.

In the insurgent-held city of Fallujah, the U.S. military said it had killed an associate of Abu Musab Zarqawi, a Jordanian-born militant whose organization claimed responsibility for Saturday's massacre. The military said multiple sources reported that the associate was in a house in northwest Fallujah when it was attacked by U.S. aircraft at 3 a.m. on Tuesday.

The U.S. government, which has accused Zarqawi of engineering many of the deadliest attacks in Iraq in recent months, has offered a $25 million reward for his capture or death. Military forces have struck Fallujah, where they believe Zarqawi and his operatives are based, almost nightly for the past several weeks. A major offensive there is expected, possibly after the U.S. presidential election, and most of the city's residents have fled in anticipation.

Allawi predicted on Tuesday that insurgent attacks would increase and become even more violent. "The enemies know if Iraqi stabilizes, it will be a serious defeat to them," he said. "Thus, they'll escalate the situation. You should expect wider operations than ones done now against Iraq."

Striking a more familiar tone of optimism, Allawi vowed that the insurgents would ultimately lose in their campaign of upheaval.

"I am confident that the majority of Iraqis are willing to cooperate to stabilize the country, and the Iraqi political powers insist to defeat those gangs," he said.

Special correspondent Omar Fekeiki in Baghdad and staff writer Thomas E. Ricks in Washington contributed to this report.

This is truly hilarious.

And shameful.

CNN is continuing to push a story they got off the Drudge Report -- sourced to NBC -- that NBC has now retracted.

But of course, CNN won't credit Drudge -- they keep sourcing NBC.

Except that NBC has retracted the story.

Because it wasn't true.

It's painfully embarrassing to watch CNN "the most trusted name in news" use the Drudge-GOP echo-chamber for their headline news.

I suppose I should have put the term in "inverted commas" -- I was being sarcastic. "Fair dinkum" is Aussie slang, means good, cool, thumbs-up. A fair-dinkum bloke would be a good guy. Steve Dunleavy is a wanker, which definitely is not a good guy. He's been Rupert Murdoch's facist attack dog since the 1960s, first at The Australian, then The Sun (U.K.), then the NY Post, and he did one of those awful tabloid TV shows (A Current Affair...? Sorry name escapes me.). When you look up the definition "Useful Idiot," you'll get profiles of Dunleavy alongside Matt Drudge, Rush Limbaugh, Ann Coulter, Joe Scarborough and Michael Savage.

1357. Re: ebay crook in action !!!

Earlier this year his alter-ego, gottahaveit1995 was bidding up his own merchandise as radio-mart. Then, "Luke" emerged as seller radiobitz11. His "about me" blurb is still in ebay's database if you do a seller search for radiobitz11. If you want a good laugh, read the crazed, rambling writing....sounds like a manifesto from the unibomber. "Luke" then disappeared. Then, gottahaveit1995 started a selling campaign. Apparently, the merry-go-round of ID switching and eBay police evasion is at a fast pace by the old boy.

This guy is a virtual nutcase. He most certainly must talk a very good line of old-fashioned B.S. in that eBay allowed him to get back on....this time, after an "extended summer vacation". Good grief.

It will be a real hoot to watch the radio-mart follies once again as the feedback (in red negative ink), starts inevitably rolling in.

One thing to look for will be the high-dollar Collins freaks who will really fuel the feedback wars when their "immaculate" equipment bears only smoke or disappointment when plugged in.

Stay tuned. Out to be alot of fun!

Oh, c'mon... you don't expect a Republican to actually use a web browser, do you?

Can a Jew Go to Heaven? George W. Bush Answered "No" in 1994
http://www.bushwatch.com/jews.htm

"Until Bush backed off this position after Billy Graham told him it was a decision for God, not governors, it was unsettling news for Jews, Muslims, and believers in any faiths other than the Christian [illegible] perhaps even for backsliding Christians."

Bush joked to reporters about his '94 answer a year or so ago, prior to a trip to the Middle East. According to stories in the Austin American-Statesman, he told reporters that he planned to stop in Israel and tell the Jews they were all going to hell. An exchange of messages between Bush and the Jewish Anti-Defamation League followed. While no one has accused Bush of anti-Semitism, there have been comments about his insensitivity, both toward the Jews and his own family. A Jewish reporter said Bush's remarks were quite upsetting to his son. No one in the Bush family has commented, but there's little doubt that Bush has touched a sore spot in family history.

According to a story in the Albian Monitor,"Prescott Bush, the father of the former President and the grandfather of the current candidate, spent more than a decade helping his father-in-law George Herbert Walker finance Adolf Hitler from the Wall Street bank, Union Banking Corporation. (Union Banking Corp. was eventually seized under the Trading With The Enemy Act. See Office of Alien Property Custodian, Vesting Order No. 248; Filed, November 6, 1942, 11:31 A.M.; 7 Fed. Reg. 9097 (Nov. 7, 1942).) Walker was one of Hitler's most powerful supporters in the United States, and landed Prescott Bush a job as a director at the firm. From 1924 to 1936, Bush's bank invested heavily in Nazi Germany, selling $50 million of German bonds to American investors. In 1934, a congressional investigation believed that Walker's Hamburg-America Line subsidized a wide range of pro-Nazi efforts in both Germany and the United States. One of Walker's employees, Dan Harkins, delivered testimony to Congressional leaders regarding Walker's Nazi sympathies and business transactions. According to US Government Vesting Order No. 248, many of Union Banking's assets had been operated on behalf of Nazi Germany and had been used to support the German war effort. The U.S. Alien Property Custodian vested the Union Banking

Corp.'s stock shares and also issued two other Vesting Orders (nos. 259 and 261) to seize two other Nazi-influenced organizations managed by Bush's bank: Holland American Trading Corporation and Seamless Steel Equipment Corporation. Many major firms had dealings with Nazis in the years leading up to World War II, but relatively few engaged in such extended cooperation with Hitler's Germany after Pearl Harbor. (The Secret War Against The Jews by John Loftus and Mark Aarons. New York; St. Martins Press, 1994.) "

More recently, both George W. Bush and his father, the former President, had been forced to deal with anti-Semitism in Poppy's campaign, according to the Albian Monitor story: "Nazism was more than a joke to George Bush when he was running for President.... In the fall of 1988, Vice President Bush had to fire several neo-Nazis and anti-Semites from his Presidential campaign. The scandal erupted when Washington Jewish Week and other media outlets discovered that the Bush campaign harbored well known neo-Nazis, including Jerome Brentar, a holocaust revisionist who claims that the Nazis never deliberately gassed victims of the Holocaust, and Akselis Mangulis, who was involved in the SS-influenced Latvian Legion during World War II.8 George W. Bush, the campaign's hatchet man, fired the Nazis.... After the election, four of these came back to work for the Republican Party according to USA Today. (Old Nazis, The New Right And The Republican Party by Russ Bellant. Boston, MA; South End Press, 1991.)...In September of 1999, when many Republicans were calling for Pat Buchanan to resign from the Party for his seeming affection for Hitler and criticism of the US actions during World War II, the presidential front-runner remained silent."

With George W. Bush's insensitive remarks and the Bush family history as background, one would hope that the Republican candidate for president will practice his newly-found maturity and be particularly wary of , in his words, the "soft prejudice" of callous remarks, wherever he may find them. --Politex, 8/8/00

"ANTI-SEMITISM" NOW ON THE TABLE RE BUSH.

"Bush supporters -- none of them affiliated with his campaign, we're told -- circulated fliers calling Mr. McCain the "fag candidate" even as Mr. Bush subtly reinforced that message by indicating he wouldn't hire openly gay people for his administration. A professor at Bob Jones University distributed e-mail accusing Mr. McCain of choosing "to sire children without marriage." (The McCains have an adopted daughter from Bangladesh -- from a Mother Teresa orphanage, no less.) Bob Jones IV wrote a cover story for a rag called World magazine slapping around the McCain family. Mr. Bush had nothing to do with this "religio-political sleaze," as William Safire described it, either, though World is edited by Marvin Olasky, the sometime Bush adviser who invented, if you please, "compassionate conservatism."...

"Now Mr. Olasky has even dragged me into the negative Bush campaign, writing a piece for the Austin American-Statesman implying that journalists who are critical of Mr. Bush have "holes in their souls," practice "the religion of Zeus" and are therefore hostile to the Texas governor's Christianity. The only three journalists he cites by name happen by total coincidence to be Jewish (Bill Kristol and David Brooks of The Weekly Standard are the other two). I'm sure it's also a coincidence that Mr. Olasky, a former Jew who converted to Christianity over 20 years ago, has spun this theory at a moment when Pat Robertson is targeting Mr. Rudman, the most visible Jew in the McCain campaign....

"Mr. Rudman takes a less benign view of the invective directed at him. "There's no question in my mind that it's anti-Semitism," he says. "The way they pronounced my name in phone calls! They're unhappy it's not Finkelstein." Nor did he think the Bush campaign was clueless about what was going on....[But] when Mr. Bush says he "wasn't very aware" of Bob Jones U.'s interracial dating policy when he spoke there, we still don't know if he's stupid or just politically cunning....[Bush is] pandering to racists, homophobes, pope-haters, anti-Semites...." --Frank Rich, NYT, 2/26/00

BUSH REFUSES TO REPUDIATE SPECIFIC INSTANCES OF RACISM AND BIGOTRY.

Twenty-four hours before the polls closed in Michigan, Texas political observer Harry Kronberg was casting a marble eye at George W. Bush's smear campaign against Mac, declaring that Dubya left no fingerprints and sent a message to the party bosses that, like his father before him, he demonstrated that he can and will do anything to win the nomination: "The vicious smear campaign against McCain was not conducted on TV. The e-mails, direct mail, whisper campaigns, talk-radio slurs and phone-banking operations were largely invisible to the rest of the country. The worst of the mess was conducted by soft-money surrogate groups so that the Bush campaign had some plausible deniability.... The governor shamelessly appropriated John McCain's reform message, even going so far as to mislead South Carolinians about his role in Texas HMO reform. While cynical on its face, the subtext was ultimately reassuring to Republicans.... But Bush's personal rhetoric stayed above the fray." (AAS, 2/2200) How wrong can one be? With the help of the Christian Coalition's Pat Robertson, the Michigan voters found Bush's fingerprints on the smear campaign and voted accordingly, leading some doubting Republican fat cats to go as far as to call for the head of Bush strategist Karl Rove.

And Bush knew he had been caught. By the time he landed in Kasas City tuesday night and got the news of his defeat, he had a statement designed to bury his smear campaign. But it backfired. First, he gathered the reporters together and loudly said, ""Let me make it crystal clear. I reject bigotry, I reject prejudice, I repudiate anti-Catholicism and racism." This statement follows South Carolina radio ads calling McCain the "fag candidate" and calling attention to his adopted black child. It also follows an attack on Mac backer ex-Senator Warren Rudman by Pat Robertson which some have characterized as anti-Semitic. Further, Robertson called him a "vicious bigot" on the basis of a statement Rudman

never made in the book passage Robertson quoted, and then, when confronted by CNN's Jeff Greenfield Tuesday night, Robertson refused to acknowledge his error. It also followed a Mac ad calling attention to Bush's visit to anti-Catholic and racist Bob Jones University in South Carolina. Bush said that he was called a "bigot" in that ad. Bush uttered a falsehood and is still doing so, even though he has been corrected by reporters more than once. (Now, he is also implying that he didn't know Bob Jones was anti-Catholic and racist prior to going there, even though the AP reported last week that his aides warned him in advance and Bob Jones trashed his father when Poppy was President.) So are these specific instances what Bush meant when he said he rejects "bigotry, prejudice, anti-Catholicism and racism?" Surely you jest. Bush only repudiates the general idea of racism and bigotry, not the specifics that forced him to make the statement in the first place.

When the reporters in Kansas City asked Bush for specific repudiations of racism and bigotry rather than vague generalizations, Bush clammed up: "Asked if he repudiated the recorded message that Mr. Robertson had put out against Mr. McCain, Mr. Bush said he did not know what the message contained, then quickly switched the focus. "I repudiate the phone calls that came in accusing me of being an anti-Catholic bigot," Mr. Bush said. What about the Bob Jones visit? "I don't make any apologies for what I do on the campaign trail," he said." (NYT, 2/24/00)

In this morning's DMN Karl Rove is quoted as saying there will be no changes made in the Bush campaign strategy, suggesting that we're going to be in for more Bush smears of McCain off camera but in radio ads and telephone push polls, leading the WP's Richard Cohen to write, "Self-described as a "uniter, not a divider," Bush has managed to unite the Christian right, homophobes, zealous antiabortionists, the Rev. Pat Robertson, Ralph Reed, Strom Thurmond and, it has to be said in fairness, many conventional Republicans, in a coalition so right-wing that should he be elected president, the European Union might treat the United States as it has Austria." --Politex, 2/25/00

Religions Broadcaster Attacks Mac Official "In a recorded message phoned to Michigan voters, religious broadcaster Pat Robertson attacks an official in John McCain's campaign as "a vicious bigot who wrote that conservative Christians in politics are anti-abortion zealots, homophobes and would-be censors."...Todd Harris, a McCain spokesman, did not allege any involvement by Bush's campaign, but said: "This is exactly the kind of politics that we had hoped we left behind in South Carolina. "Pat Robertson and (former Christian Coalition director) Ralph Reed hand delivered Governor Bush's victory to him in South Carolina," Harris said. "The people of Michigan have an opportunity to repudiate these kinds of negative smears."..."We are not making any Pat Robertson calls," said Bush campaign spokeswoman Mindy Tucker. "Our campaign doesn't know anything about it." AP, 2/21/00

Candidate Christ and George W. Bush

Bush Plays the Jesus Card. "As H. L. Mencken pointed out, religion 'is used as a club and a cloak by both politicians and moralists, all of them lusting for power and most of them palpable frauds.' George W. Bush scored some debate points [in Iowa] by supporting the holy trinity of ethanol, Jesus and soft money. (Didn't Jesus throw those soft-money changers out of the temple?)
When the Republican candidates were asked to name their favorite political philosophers, Mr. Bush replied: 'Christ, because he changed my heart.' Pressed to elaborate, the Texas governor again showed his inability to go deep.
His mouth curled down into that famous smirky look. 'Well, if they don't know, it's going to be hard to explain,' he said. 'When you turn your heart and your life over to Christ, when you accept Christ as the Savior, it changes your heart. It changes your life. And that's what happened to me.' Translation: You're either in the Christ club or out of it, on the J.C. team or off. This is the same exclusionary attitude, so offensive to those with different beliefs, that he showed in 1993 when he said that you must believe in Jesus Christ to enter heaven. (Mr. Bush has since conceded that only 'God decides who goes to heaven, not George W. Bush.')....
This is the era of niche marketing, and Jesus is a niche. Why not use the son of God to help the son of Bush appeal to voters? W. is checking Jesus' numbers, and Jesus is polling well in Iowa. Christ, the new wedge issue. When you take something deeply personal and parade it for political gain, you are guilty either of cynicism or exhibitionism." --Maureen Dowd

Candidate Christ "and a large crowd of reverent volunteers, all of them broke, were trudging along behind the candidate on the cold highway outside Red Bud, Ill., far from the Iowa caucuses. "If we ever get there, we could win the thing easy," the campaign manager said. "He has very good name recognition. Way bigger than Lincoln." He waved an arm in exuberance. "They can't even steal an election from him by voting dead names. Our candidate will come right in with his Lazarus move. He'll have a million at any poll by nightfall. They may come in shaking a lot of dust off them, but they'll be voters. Candidate Christ, he said, merely by his presence could demolish these temporal politicians who use his name like it was a commercial product. In particular, candidate Bush. "How can he say he carries me, Jesus Christ, in his heart," candidate Christ asked, "when at the same time he stands by while people are put to death?" He spoke in a soft voice that carried for a million miles. The candidate continued, "How can he love Christ and take part in capital punishment? I say to you there have been 112 people put to death so far, while he maintains that I reside in his heart. Did not a woman beg for her life and he refused her? I say to you there will be chastisement for using the name of Christ in vain. My position is to listen to the groaning of the prisoners, to release those doomed to death." --Jimmy Breslin

"Does Bush think that Jesus smiled down upon him as he allowed these 112 executions to take place? Does Bush believe in the Biblical line "Vengeance is mine, saith the Lord" or does he not? Does Bush accept only

part of the message of Jesus while in his own wisdom feels free to ignore the rest? What does he accept and what does he reject? Is Bush a Christian who believes that Jesus preached a philosophy of love and forgiveness? Or does he believe that in spite of what Jesus said and did, the Christian God must be a punishing Old Testament deity, with Bush merely serving as another exterminating angel?...

"Such questions....are not irrelevant when Bush the Candidate makes his religion a major entry in his biography and a reason for some Americans to elect him president.... "On matters of life and death, Cardinal Bernardin of Chicago used to speak about the "seamless web." It was an argument for moral coherence. If you opposed abortion, he said, you must also oppose capital punishment and most wars. Life itself was sacred, said Bernardin; only God could bring it to an end, not someone as flawed as a man. That was a coherent and humane philosophy, whether you were religious or not. Bush, like so many other politicians, wants it both ways: to trumpet his Christian beliefs, while maintaining the freedom to kill human beings." --Pete Hamill

Bush Plays the Jesus Card. "As H. L. Mencken pointed out, religion 'is used as a club and a cloak by both politicians and moralists, all of them lusting for power and most of them palpable frauds.' George W. Bush finally scored some debate points on Monday night by supporting the holy trinity of ethanol, Jesus and soft money. (Didn't Jesus throw those soft-money changers out of the temple?)
When the Republican candidates were asked to name their favorite political philosophers, Mr. Bush replied: 'Christ, because he changed my heart.' Pressed to elaborate, the Texas governor again showed his inability to go deep. To borrow a Dorothy Parker quip, he ran the gamut from A to B. Just as in the last debate, when he was asked to expound on a biography of Dean Acheson, he gave the impression that he thought coughing up an impressive name was quite enough.
His mouth curled down into that famous smirky look. 'Well, if they don't know, it's going to be hard to explain,' he said. 'When you turn your heart and your life over to Christ, when you accept Christ as the Savior, it changes your heart. It changes your life. And that's what happened to me.' Translation: You're either in the Christ club or out of it, on the J.C. team or off. This is the same exclusionary attitude, so offensive to those with different beliefs, that he showed in 1993 when he said that you must believe in Jesus Christ to enter heaven. (Mr. Bush has since conceded that only 'God decides who goes to heaven, not George W. Bush.')....
This is the era of niche marketing, and Jesus is a niche. Why not use the son of God to help the son of Bush appeal to voters? W. is checking Jesus' numbers, and Jesus is polling well in Iowa. Christ, the new wedge issue. When you take something deeply personal and parade it for political gain, you are guilty either of cynicism or exhibitionism." --Maureen Dowd

In fairly rough terms it means true or genuine. It's Aussie slang, mate.

Maybe when Drudge posts a follow-up retraction, CNN will do likewise. But you know Drudge won't do it, because he's a White House pimp.

Those of Jewish faith are superb partners, sayeth Lord Bush. The only problem is, they have to die in the 4th act of a 5-act play. They can however be saved: by accepting the blood of the Lord Jesus Christ, or perhaps shedding it for Lord Bush Himself.

Strange, that's not what National Security Advisor thinks. After claiming a high alert of a pre-election attack, does Condi Rice get her priorities straight and man the battle stations? Ummm, sadly, no. There's more important things to do that protect Americans, like get on the stump and campaign to re-elect her president.

Actually, if you took your head outta Rush Limbaugh's arse long enough to get a whiff of reality, you'd see quite clearly that Kerry has plenty of plans. Even better, when he gets elected, America will regather some long-lost credibility, which the current administration has completely squandered, and the rest of the world will sit up and take notice. Even the U.K., your solid ally, has no plans to get involved with any more trumped-up fabricated Bush adventures. Nations are turning away from Bush, it's a lose-lose preposition, because Bush has ZERO credibility. Your nation needs things like credibility and friends. Kerry is your best bet. Thank you.

I bought and have been using a Wellbrook ALA330S for the past few weeks. Andy Ikin, the designer told me that noise pickup is least when mounted at ground level. I have it in the attic now and it has really opened my eyes as too the importance of signal to noise ratio. It does not provide the same high signal levels I get from some other antennas, but it consistently provides the cleanest, clearest signals...it always sounds best, even when signal levels coming out of it are lower than other antennas. It is an excellent antenna and a real "ear opener!"

Jay

Cool. And I get your point. The American Heritage Dictionary has formally announced it won't be putting representative pictures next to words like "idiot" and "bastard" since the Bush crowd has come into power. With Hannity, Coulter, Savage, Limbaugh, etc....There's simply too many examples to choose from.

Report: Explosives already gone when U.S. arrived

(CNN) -- The mystery surrounding the disappearance of 380 tons of powerful explosives from a storage depot in Iraq has taken a new twist, after a network embedded with the U.S. military during the invasion of Iraq reported that the material had already vanished by the time American troops arrived.

NBC News reported that on April 10, 2003, its crew was embedded with the U.S. Army's 101st Airborne Division when troops arrived at the Al Qaqaa storage facility south of Baghdad.

While the troops found large stockpiles of conventional explosives, they did not find HMX or RDX, the types of powerful explosives that reportedly went missing, according to NBC.
...
Baghdad fell on April 9, 2003. According to NBC, troops from the 101st Airborne arrived the next day to find that the material was already gone.

Prior to the Iraq war, the high-grade explosives at Al Qaqaa had been under the control of IAEA inspectors because the material could be used as a component in a nuclear weapon, IAEA spokeswoman Melissa Fleming said. IAEA and other U.N. inspectors left the country in March 2003 before the fighting began on March 19.

Nobody said that you need permission. And crossposting aside, it's bad form
to alter headers without noting that fact. That's all.

Oh, so -that's- why my Grundig makes those odd noises on occasion.

Must have something to do with the way I twiddle its knobs. After I turn it
on, of course.

Probably enough skilled people living and working in the capital cities
often for foreign companies on foreign salaries. It's the people outside
this category who can not afford it, but since they did not pay before
what have Worldspace lost? You also need to consider how many people in
a third world country could afford to buy a ~100 GBP radio.

I dont think Hitler would vote for Kerry since Bushs Grandfather Prescott supported Hitler. I am sure Hitler would reciprocate if he were still alive.

Of course poor people will not buy 100 GBP radios, or even $100 radios. And they certainly won't be able to justify a regular subscription.

I don't think anyone is expecting the 'huddled masses' to be amongst the first purchasers of DRM radios.

But as with all new technology the price comes down rapidly. My DAB tuner cost me GBP 350 3 years ago - I saw a DAB radio in the supermarket tonight for GBP 49, and a DVB adapter for GBP 25. You'd be lucky to get an analogue SW receiver for GBP 25.

From the examples I have heard DRM is a step change in reception for international broadcasting and, eventually, LF & MF broadcasting. If you want any form of viable broadcasting to remain in these bands DRM is certainly a better option than the status quo which will continue to dwindle.

Countries are finding that none of their
nationals are listening, Germans not listening
to DW, Brits not listening to BBCWS etc.
So the most important self-market is lost.
Only countries wise in diplomacy know that a
constant SW presence in the vernacular languages
(Pashto to Afghanistan, Spanish to the Aamericas, etc.)
will be useful in the future influence (rising incomes,
desire to buy quality imported goods, friendly to military
occupiers, etc. etc.)
Shortwave is a cheap fifth column for multiple externalities.

Then quit acting like it. And for your information dimwit I have worked in countries where wars were or have taken place. My ocupation has taken me all over the globe repairing damaged equipment and piplines. I have many many friends that live in these countries as well. You don't have to be in the military Les.

I was just in Nigeria where only the 10 or 20 dollars (USD)
Chinese radios are used. There are Sony's sold, but
Worldspace radios are very uncommon, and a friend only
got one as a prixe in a RFI contest, but otherwise couldn't
spend that kind of money for a radio.
Shortwave there had everything, from the Middle East, Europe
and Ascension, much of it for several hours of programming.
Worldspace is an idea, but in practice little used.
And my friend fried their radio so that they could only
use the earphones as the speaker circuit didn't work for
WorldSpace, and they moved every four months for economic
reasons and not every place was suitable for setting out the
WorldSpace without getting it ripped off.

"ocupation" "piplines"

Well, It is obvious your occupation isn't connected to correct spelling.

I have always been amazed that those who are most vocal about wars have never served in the military. "Warmonger" my ass! You come from a generation that can't spell, didn't join the military and now you want to crush and kill.

And, yes I served, 1960-1964 U.S. Navy.

Les

I've read reports of the 3030 having intermod problems, but overall it gets good reviews. How is the synch detector on it? How does it compare to Drakes?

1413. Re: "aquarium" stations

The "jammer" you can hear in the background of most Radio Marti
broadcasts has always sounded like an "aquarium" to me. It's probably a
lot louder in Cuba, where the jamming signal originates (I think).
We're a lot closer to the Radio Marti signal, so it's just kind of in
the background. That's one possibility of what it is, anyhow.

Tony

No just want to rid the world of scumbags that do crush and kill. Why don't you get off your dead ass and go to some of these countries and see for yourself how these people are treated and how they have to live. If you did, your tune would change. Your way is to ignore it. Buy the way. Your critique of my spelling is lame at best.

True. Dan Rather has it out for Bush. So what? What's your problem
with it? He's entitled to his opinion.

Well, for starters, I lived overseas from 1954 until 1960. I've been in just about any country in the middle east, africa, and europe that were legal to enter between 1957 and 1972.

I'm trying real hard to figure out what that has to do with your dream date ann coulter (transsexual) getting pied?

My ass isn't dead yet sonny, still hitting it five days a week and making damn good money. But, next year will see my fun-o-meter getting pegged.

Keep working so I can retire in the manner in which I am accustomed to living will you?

If you spelled correctly, nobody would critique it now, would they?

Go look at that picture of dan coulter and drool.....

check his/her adams apple dummy!

Les

Heard an encrypted message on 111.75 @ 21:20 z. First heard some tones going back and forth. Never had heard them before. Then heard some short transmissions and what sounded like a test count (1,2,3,4,5--5,4,3,2,1). Tried twidling the (electronic) knobs. No Joy.

> mind/Doth from my senses take all feeling

The US Security services have a 'Tempest' EMI standard. Actually it is
an Acronym for Transient Electromagnetic Pulse Emanation Standard)

Technically it is National Communications Security Information
Memorandum 5100 or NCSIM 5100. The exact specification is classified,
but having actually seen some Tempest compliant equipment in the late
1980's, I can tell you it makes FCC class B look like a cake walk.
Several computer makes made Tempest compliant systems, and other
Tempest Compliant devices. The idea was that these devices would have
no EMI/RFI signature to intercept.. These things would be used inside
embassies, Military, FBI and various intelligence installations.

Such systems were tested to comply with the Tempest standard

Not all devices have such a signature in the first place. The US Navy
is quite fond of TRF radios. Devices that have no oscillators
generally have no significant signatures either. TRF radios lack
oscillators, hence have no significant EMI/RFI signature.

Well, for starters, if you've actually visited those regions and countries
you should know which words in that sentence ought to be capitalized.

> If you spelled correctly, nobody would critique it now, would they?

Really, I believe no comment here is needed.

I would, however, like to point out that I've ignored other errors in your
writing. And again, you're welcome.

Simply put, you can't rely on his descriptions, and from what I've
heard, the item in the photo may look much nicer than the one he ships.

I have a feeling it's always been a deep personal sadness for Karl that he never had the chance to work with Hitler. So much more damage that could have been done.

Back when a GPS receiver wasn't a common item, my non-aircraft-type
GPS receiver got the same reception on a flight. The captain couldn't
stop playing with it. (I think he wanted me to offer to give it to
him.)

You are getting the story laughably wrong. Just like Bush and his stooge Matt Drudge. Kerry's outrage is deserved. Those weapons disappeared right under Bush's nose. He is an incompetent boob. His pre-planning for his War of Choice is a sick & perverted joke. It's a sad day when the president of the United States gets his talking points from a retracted NBC story.

(October 26, 2004 -- 10:52 PM EDT)
The lede in tomorrow's Times story about al Qaqaa ...

White House officials reasserted yesterday that 380 tons of powerful explosives may have disappeared from a vast Iraqi military complex while Saddam Hussein controlled Iraq, saying a brigade of American soldiers did not find the explosives when they visited the complex on April 10, 2003, the day after Baghdad fell.
But the unit's commander said in an interview yesterday that his troops had not searched the facility and had merely stopped there for the night on their way to Baghdad.

And then there's this ...

President Bush's aides told reporters that because the soldiers had found no trace of the missing explosives on April 10, the explosives could have been removed before the American invasion. They based their assertions on a report broadcast by NBC News on Monday night that showed video footage of the 101st arriving at Al Qaqaa.
By yesterday afternoon, as Mr. Bush made his way through Wisconsin and Iowa, his aides had moderated their view, saying it was a "mystery" when the explosives disappeared. They said that it could have happened before or after the invasion and that Mr. Bush did not want to comment on the matter until the facts were known.

Reduced to hanging their hat on the say-so of the NBC News crew. Splendid.

Much more on this evening. But for now, this stuff pretty much says it all, doesn't it?

There you go again. The CNN story is already old, already wrong. They cite an original NBC post that NBC News went to great lengths tonight to discredit. In fact, they threw extra egg on Bush's face. Examine the facts:

(October 26, 2004 -- 10:52 PM EDT)

The lede in tomorrow's Times story about al Qaqaa ...

White House officials reasserted yesterday that 380 tons of powerful explosives may have disappeared from a vast Iraqi military complex while Saddam Hussein controlled Iraq, saying a brigade of American soldiers did not find the explosives when they visited the complex on April 10, 2003, the day after Baghdad fell.

But the unit's commander said in an interview yesterday that his troops had not searched the facility and had merely stopped there for the night on their way to Baghdad.

And then there's this ...

President Bush's aides told reporters that because the soldiers had found no trace of the missing explosives on April 10, the explosives could have been removed before the American invasion. They based their assertions on a report broadcast by NBC News on Monday night that showed video footage of the 101st arriving at Al Qaqaa.

By yesterday afternoon, as Mr. Bush made his way through Wisconsin and Iowa, his aides had moderated their view, saying it was a "mystery" when the explosives disappeared. They said that it could have happened before or after the invasion and that Mr. Bush did not want to comment on the matter until the facts were known.

Reduced to hanging their hat on the say-so of the NBC News crew. Splendid.

In all his decriptions he hypes the condition of the product. I bought a "like new" with box radio from him. One potentiometer on the front was bad, and it had some scracthes on top he never mentioned. It also said it "is the latest model number I have ever seen before" when it turned out to be a pretty early model number. I was new to SWL listening and just trusted him and fell for it.

After I received the radio I wrote him, telling him he's a cheat and asked for some money back. He quickly refunded some money to my Paypal account. I was scared to send it back really in fear of ending up with nothing.

Now on the fair side. Does the radio work?Yes it does. But that's not the point. He's a bullcrap artist that can't be totally trusted. It's up to you. Ask the right questions of him and save the e-mails. Pay with a credit card just in case.

Lucky

Bush insisted the invasion of Iraq was about weapons and terrorists.

So when flyboy invaded Iraq, he ignored the weapons, and let them slip into the hands of the terrorists.

Bush insisted the invasion of Iraq had nothing to do with oil.

So when flyboy invaded Iraq, the one single ministry and industrial infrastructure flyboy secured was, you guessed it, the oil ministry and the oil fields.

Good to get your lies and priorities in order Mr. Bush.

No wonder the world doesn't trust you. You are a bald-faced liar making plays outta the Josef Goebbels hand-book.

You would truly have to be an ignorant gullible idiot to believe this filthy liar and vote for him.

> his personal opinions. He is supposed to report the news, not make it up.

Why would you expect him, or any of the networks to change their tune now?
They were all on board whipped up with war hysteria and spreading White
House lies like manure over the American heartland. None asked serious
questions. They were all White House stenographers before the war.

1453. Portrait of a country on the verge of a nervous break

Portrait of a country on the verge of a nervous breakdown
With only nine days to go and the polls showing Bush and Kerry still neck and neck, the result is once agin likely to turn on the minutiae of the voting system. But this time the whole country seems poised to descend into post-election chaos. Andrew Gumbel reports on the traumatising effects of this bitter campaign and how, as the world's most powerful democracy talks of exporting freedom to Iraq, it is at risk of becoming an object of international ridicule
24 October 2004
The Independent UK
No need to wonder if this year's US presidential election is headed for another meltdown: the meltdown has already started. The voting machines have already begun to break down, accusations of systematic voter suppression and fraud are rampant, and lawyers fully armed and ready with an intimate knowledge of the nation's byzantine election laws have flocked to court to cry foul in half a dozen states.

Nine days out from election day, we don't yet know whether the state-by-state arithmetic will lead to a post-election stalemate similar to the 36-day battle for Florida in 2000. It is, of course, possible that the margins of victory in the 50 states will be wide enough to avert the worst - even if overall conditions are likely to fall short of the usual definition of a free and fair election.

Given the nail-bitingly close numbers in the opinion polls, however, Election 2004 could just as easily produce a concatenation of knockdown, drag-out fights in several states at once, making the d�b�cle in Florida four years ago look, in retrospect, like the constitutional equivalent of a vicarage tea party.

Last week saw the start of early voting in Florida and a clutch of other states, and with it came a plethora of problems. In three heavily populated counties - around Tampa, Orlando and Fort Lauderdale - the network connection used to verify voter identifications broke down on the first day, creating hours of delay. In Jacksonville, where poor ballot design in 2000 knocked out the votes of 27,000 poor, predominantly black, predominantly Democratic voters, the county elections supervisor chose the first day of polling to resign, citing ill health. He had come under fire for failing to make early voting available in the city's African-American neighbourhoods - something his interim successor is now going some way to remedy.

Elsewhere, there were computer breakdowns during early voting in Memphis. Pre-election testing of electronic machines in Riverside County, California, and in Palm Beach County, Florida, led to multiple computer crashes. Elsewhere, machines have manifested problems handling basic addition -

especially when asked to display instructions in a language other than English. Several county administrators have chosen simply to skip the non-English language part of the test.

In Nebraska, dead people were found to have applied for absentee ballots. In Ohio, a representative of the National Association for the Advancement of Colored People was found to have offered crack cocaine to a known drug addict in exchange for completed voter registration forms, which he duly submitted in the names of Mary Poppins, Janet Jackson and Jeffrey Dahmer, the notorious cannibal serial killer.

This is just the beginning. The Kerry campaign alone has signed up 10,000 lawyers around the country to oversee registration and absentee ballot procedures, keep tabs on computer voting companies, collect stories of alleged disenfranchisement or irregularities at the polls, and watch state elections officials with hawk-eyed attention for every ruling that might be construed as having a partisan, rather than a public interest intent.

"The lawyering won't start the day after the election," said Kendall Coffey, a Democratic Party lawyer in Miami who was deeply involved in the 2000 fiasco. "It's already under way." Florida Congressman Robert Wexler, who is deep in litigation with his state government over the failure of Florida's electronic voting machines to produce an independent paper trail, concurred. "The dangers are limitless," he said. "They are limited only by the inventiveness of those who would tamper with the system and create havoc."

It beggars belief that the world's most powerful democracy should find itself in this hole for the second time in a row - becoming an object of international ridicule, scorn and not a little alarm, even as the country's leaders talk idealistically about exporting American freedom and democracy to Afghanistan, Iraq and beyond.

After the last fiasco everyone from President Bush down vowed to fix the system and ensure another Florida could never happen. But three big things went wrong. First, the new generation of computer touchscreen machines - brought in at dizzying speed and at even more dizzying cost to replace the discredited old punch-cards - turned out to be poorly programmed, unverifiable, prone to all manner of failure and susceptible to undetectable foul play.

Secondly, the Bush administration dragged its feet about enacting funding its own new election laws. As a result, most states won't have their electoral procedures fully updated and coordinated until the next presidential election in 2008. That, in turn, is opening up furious arguments about the ill-defined rules for provisional ballots, absentee ballots, ID card requirements at polling stations and other seemingly esoteric bureaucratic niceties that could have a huge impact on turnout - especially among the poorer, less educated classes who have traditionally been ignored, if not excluded, by the two major parties.

Thirdly, the political leadership allowed itself to be deluded into thinking that the dysfunctions of the US electoral system were purely a matter of

technology. Fix the machines, the thinking went, and everything else will be fine. What should have been glaringly obvious in 2000, and is even more glaringly obvious now, is that the failures of the electoral process were a direct result of the ferocity of broader political battles. The blithe incompetence of local election officials and their wonky machinery were side-effects of these battles, not the cause.

In 2000, much of the agony of Florida could in fact have been avoided if the parties had agreed to a state-wide manual recount - as happened in an equally close, but amicably resolved, Senate race in Washington state that year. It was the high stakes of the White House, not the messy accumulation of hanging, dimpled and pregnant chads, that sparked the crisis. And we know the stakes are infinitely higher this time, in what has been called the most important US election in memory.

There has been nothing to match the current passions in American politics since the Civil Rights era and the Vietnam War. Campaigns have never been dirtier, or more intensely fought or more expensive. Both major parties have vowed to do whatever it takes to win, and each has accused the other of engaging in out-and-out cheating.

The whole country - never mind the woefully inadequate electoral system - is now living on the edge of a nervous breakdown. Little wonder, then, if many are predicting some sort of collapse on 2 November. "Only a miracle, it strikes me, can prevent this election from descending into post-election chaos," John Dean, the Watergate-era White House counsel who knows a thing or two about electoral dirty tricks, wrote last week.

What has been striking is the sheer nastiness of the fight. In Oregon, Pennsylvania and Nevada - all swing states - a Republican political consulting group called Sproul & Associates has been accused of passing itself off as a non-partisan or even a Democratic civic organisation to collect voter registration applications outside libraries and supermarkets. In at least two instances now under criminal investigation, company employees have been accused of processing the applications of declared Republican voters while throwing the forms marked Democrat into the nearest rubbish bin. Sproul, which has received more than $600,000 (£330,000) from the Republican National Committee, has denied ever endorsing such practices. Still, the discarded voter registration forms have been paraded on television for all to see.

In Ohio and Florida, it is the Republican secretaries of state - who oversee elections - who have been accused of putting partisan preference above their solemn civic duties. Ohio's Ken Blackwell won points from voting rights activists earlier in the year when he chose not to go ahead with a massive state-wide buy of electronic voting machines. Since then, however, he has tried to insist that all voter registration forms be submitted on 80lb stock paper - a ruling struck down by the courts after he was accused of blatantly attempting to suppress the votes of likely Democrats.

He has also tried to make life harder for provisional voters, saying their ballots will be recognised only if they show up at exactly the right

precinct. This too was struck down in court because it was deemed likely to suppress votes - especially among transient students and low-income workers. But Secretary Blackwell has continued to implement the policy in defiance of the court order, prompting a harsh rebuke from the judge.

In Florida, Secretary of State Glenda Hood has been repeatedly accused of doing the political bidding of the man who appointed her - Governor Jeb Bush, the President's brother. Her more recent exploits include directing county supervisors to throw out registration forms where applicants have signed a statement declaring they are US citizens but have forgotten to check a citizenry box elsewhere on the form. This, too, is seen as a vote-suppressing mechanism. It, too, is now in the courts.

Secretary Hood has also been waging a months-long campaign to ban what limited manual recounts the electronic voting machines permit. Her initial ruling was struck down by the courts, but now she has come up with a staggeringly devious rewrite. The state will now permit analysis of the computerised machines' internal audit logs in the event of a close race, she said, but if there is any discrepancy the county supervisors are to go with the original count. In other words: we will do recounts, but if the recounts change the outcome we will disregard them.

Secretary Hood's actions illuminate the real attraction of the electronic voting machines in the states where they have been introduced. They may work no better than the old punch-card machines - studies suggest they fail to record as many votes as their predecessors. In the absence of an independent paper trail, how- ever, all evidence of problems is hidden away in the binary code of an electronic black box and is, to all intents and purposes, invisible.

This raises intriguing and troubling questions about what a post-election contest might look like. One can reasonably anticipate - based on past experience - an avalanche of stories about voters turned away from polling stations, told they are on a felons list even if they have no criminal record, or kept waiting for hours because of technical glitches. No doubt people will tell some of those thousands of lawyers how they pressed the screen for one candidate, only to have the other's name light up.

The problem is, even if lawyers for the losing candidate are able to prove that the system failed, they will find it very difficult to talk specific numbers and demonstrate that enough votes were lost to alter the outcome.

How the courts will react to this hypothetical state of affairs is anybody's guess. They could accept the given election results, however flawed. They could allow the arguments to rage until December, when the electoral college is supposed to meet, or even into the new year, when an undecided election would be thrown into the House of Representatives.

Or they could be trumped, once again, by the Supreme Court. The most disconcerting possibility is that the highest court in the land could remove the electoral process from the voters altogether and turn it over to the state legislatures. Technically, they can do this under Article II of the

Constitution, which offers no automatic right to vote. We know from the deliberations in 2000 that two, possibly five, of the nine justices have doubts whether the people should be the ultimate arbiters of presidential elections - a strict, literal reading of the Constitution that no modern Supreme Court countenanced before the current crop of ultra-conservatives. "After granting the franchise in the special context of Article II," the majority declared in its Bush vs Gore ruling, "[the state] can take back the power to appoint electors."

Were this scenario to play out it would leave the fate of many of the electoral battlegrounds in the hands of Republican-controlled state legislatures (in Florida and Ohio, for starters), who would promptly hand the election to George Bush. Talk about a nightmare scenario - which is why every elections official and every "small d" democrat in the land is praying it won't get that close.

1457. Hannity, Blitzer, and The Note mischaracterized NBC report on NYT missing-explosives article

Newsgroup: rec.radio.shortwave
Date: 2004-10-27 03:48:57 UTC

Hannity, Blitzer, and The Note mischaracterized NBC report on NYT missing-explosives article

Following The New York Times's disclosure on October 25 that "nearly 380 tons of powerful conventional explosives -- used to demolish buildings, make missile warheads and detonate nuclear weapons -- are missing from one of Iraq's most sensitive former military installations," members of the media incorrectly reported that a subsequent NBC Nightly News story refuted aspects of the New York Times article.

FOX News Channel co-host Sean Hannity, CNN host Wolf Blitzer, and ABC News's online political briefing "The Note" all suggested that NBC reported that the explosives were already gone by the time the U.S. military first arrived on April 10, 2003, at the installation in question. But at no point did the October 25 NBC report claim that the April 10 stopover of U.S. troops, which included an embedded NBC reporter, was the first time the U.S. military visited the Al Qa Qaa installation. Indeed, the Associated Press reported that U.S. soldiers had been there six days earlier, and did find evidence of explosives. Moreover, the same NBC correspondent who issued the October 25 report clarified on October 26 that troops were simply passing through the installation on April 10 and were not looking for explosives.

According to a report on the October 25 edition of NBC's Nightly News, an NBC reporter embedded with the 101st Airborne Division arrived at the Al Qa Qaa military installation on April 10, one day after the fall of Baghdad. From the report by NBC Pentagon correspondent Jim Miklaszewski:

MIKLASZEWSKI: April 10, 2003, only three weeks into the war, NBC News was embedded with troops from the Army's 101st Airborne as they temporarily take over the Al Qa Qaa weapons installation south of Baghdad. But these troops never found the nearly 380 tons of some of the most powerful conventional explosives called HMX and RDX, which is now missing. The U.S. troops did find large stockpiles of more conventional weapons, but no HMX or RDX, so powerful, less than a pound brought down Pan Am [Flight] 103 in 1988 [over Lockerbie, Scotland] and can be used to trigger a nuclear weapon.

In a letter this month, the Iraqi interim government told the International Atomic Energy Agency [IAEA] the high explosives were lost to theft and looting due to lack of security. Critics claim there were simply not enough U.S. troops to guard hundreds of weapons stockpiles, weapons now being used by insurgents and terrorists to wage a guerrilla war in Iraq.

Based on that NBC report, Hannity and Blitzer incorrectly suggested and The Note simply -- and falsely -- asserted that NBC reported that the weapons were gone by the time the troops first arrived at the Al Qa Qaa site. But at

no point did the NBC report claim that the arrival of its embedded crew at Al Qa Qaa on April 10 was the first time U.S. troops visited the site. In fact, as the Associated Press reported (on April 5, 2003), the U.S. military arrived at the site six days earlier, on April 4, when the 3rd Infantry Division found, among other things, "white powder that appeared to be used for explosives."

Here's what Hannity said on the October 25 edition of FOX News Channel's Hannity & Colmes:

HANNITY: NBC News just late tonight broke this story. They were with the 101st when they arrived at that facility with the weapons. And what they discovered, there were no weapons when the military arrived.

CNN's Wolf Blitzer repeated the error on the October 26 edition of News from CNN:

BLITZER: It's unclear, though, when those explosives went missing. The IAEA apparently says that earlier, just before the war, they did verify they were still at that location -- the Al Qa Qaa location, but when troops got there by April 10, April 11, after [former Iraqi leader] Saddam Hussein fell, apparently they were no longer there, those tons of explosives.

The October 26 edition of ABC News political unit's "The Note" repeated the error as well:

An NBC News report last night suggested that those explosives went missing before April 10, 2003 -- before U.S. troops ever got to the site in Iraq, leading to an avalanche of push-back from the Bush campaign last night. If the 101st Airborne Division was indeed there one day after liberation and they could not find any of the high grade explosives, that does cast doubt on the suggestion that the Bush Administration's alleged failure to plan for post-war eventualities was to blame.

NBC's Miklaszewski clarified on October 26 that there was another reason why the troops arriving April 10 didn't find explosives -- they weren't looking for them. Following up on his report on NBC's Nightly News, Miklaszewski offered this additional clarification on MSNBC on October 26:

Following up on that story from last night, military officials tell NBC News that on April 10, 2003, when the Second Brigade of the 101st Airborne entered the Al Qa Qaa weapons facility south of Baghdad, that those troops were actually on their way to Baghdad, that they were not actively involved in the search for any weapons, including the high explosives HMX and RDX. The troops did observe stockpiles of conventional weapons but no HMX or RDX, and because the Al Qa Qaa facility is so huge, it's not clear that those troops from the 101st were actually anywhere near the bunkers that reportedly contained the HMX and RDX.

Here's a fun fact: Did you know that "You need to start taking your meds
again" ceased to be clever around 1997?

Dude, with all apologies, since this newsgroup is infested with posts based upon factually incorrect information (and dare I say, outright distortion), it's incumbent that someone who hasn't been snowed by the Drudge Report provide accurate information to rectify it. It's called democracy, checks & balances, it's there in the Bill of Rights and Constitution, expanded upon by great men like Thomas Jefferson. (Perhaps you could look it up.) I have a life, it's the world of reality. Perhaps you prefer the faith-based fantasy world where facts and truth are nasty inconveniences and obstacles for the Bush administration. That's okay, there's room for you too. But lies will be called what they are: lies. Have a nice day!

1460. U.S. gave date of war to Britain in advance, court papers reveal

U.S. gave date of war to Britain in advance, court papers reveal

By Colin Brown, Deputy Political Editor

The Independent UK

27 October 2004

Secret plans for the war in Iraq were passed to British Army chiefs by US defence planners five months before the invasion was launched, a court martial heard yesterday.

The revelation strengthened suspicions that Tony Blair gave his agreement to President George Bush to go to war while the diplomatic efforts to force Saddam Hussein to comply with UN resolutions were continuing.

Alan Simpson, the leader of Labour Against the War, said the documents were "dynamite", if genuine, and showed that Clare Short was right to assert in her book, serialised in The Independent, that Mr Blair had "knowingly misled" Parliament.

The plans were revealed during the court martial of L/Cpl Ian Blaymire, 23, from Leeds, who is charged with the manslaughter of a comrade while serving in Iraq. Sgt John Nightingale, 32, a reservist from Guiseley, West Yorkshire, died after being shot in the chest on 23 September last year.

The court, at Catterick Garrison, North Yorkshire, heard that contingency plans were drawn up by Lt Col Christopher Warren, staff officer at Land Command, Salisbury, Wiltshire, who was responsible for operational training.

Lt Col Warren said US planners had passed on dates for which the invasion was planned. The hearing was told Army chiefs wanted the training for the Army to start at the beginning of December 2002. However, due to "sensitivities" the training was delayed.

The court heard the training for the TA began two months late and for the regular Army one month late. Lt Col Warren was asked what the sensitivities were. He replied: "Because in December there was a world interest. If the UK had mobilised while all this was going on that would have shown an intent before the political process had been allowed to run its course."

The hearing was adjourned.

THAT NBC SCOOP: Before crashing Monday night, I was bombarded with emails informing me that NBC had reported that the explosives at al Qa Qaa were gone before the U.S. troops arrived. But last night, Tom Brokaw reported as follows:
"Last night on this broadcast we reported that the 101st Airborne never found the nearly 380 tons of HMX and RDX explosives. We did not conclude the explosives were missing or had vanished, nor did we say they missed the explosives. We simply reported that the 101st did not find them. For its part, the Bush campaign immediately pointed to our report as conclusive proof that the weapons had been removed before the Americans arrived. That is possible, but that is not what we reported."
Just for the record.

http://www.andrewsullivan.com/index.php?dish_inc=archives/2004_10_24_dish_archive.html#109884823065240776

QUOTE OF THE DAY: "The commander of the first unit into the area told CBS he did not search it for explosives or secure it from looters. 'We were still in a fight,' he said. 'Our focus was killing bad guys.' He added he would have needed four times more troops to search and secure all the ammo dumps he came across." - CBS' latest press release on the missing explosives. Four times more troops. But that would have meant doing it right.

Not enough troops.

Evidence of cheating, please.

--
NBC News reported Monday night that those 380 tons of missing explosives were
already gone when U.S. troops arrived at the Al-Qaqaa weapons installation
in April 2003 - one day after Saddam's government was toppled.
New York Times 18 MONTHS LATE, CBS was saving it for election eve ambush!

No. Instead I'll listen to a bunch of bs spewed by people on a NG that keep changing their identity. Without a doubt THEY are much more credible.

Now run off and join the rest of the flock.

> the printed media.

But that limatation has been relaxed. There have been many new licenses
issued since 1980, and there are many more 24 hour stations. Given the open
situation, I'm sure there many open radio frequencies in most markets. TV
channels haven't been saturated since the introduction of UHF in the early
50s.

Should the fairness doctrine apply in markets in which there are open
frequencies and channels?

Why not? Despite their large bandwidth, satellites don't have an unlimited
number of frequencies. The FCC currently has jurisdiction over wire
communications, but they generally have never enforced program content
there. Isn't it unfair that fairness, as defined by the government, isn't
enforced there as well?

But why do they listen? Is it because they have single digit IQs? If they
are really that stupid, is regulating their radio and TV programming all it
takes to make them smarter?

They still sell newspapers. And the internet is a better newssource than radio and TV ever was. If radio and TV disappeared entirely as a news source, people would still have no excuse for being uninformed.

Stations go on sale from time to time. They aren't cheap, but that's a reflection of the revenue they can bring in. And the revenue reflects the number of listeners.

I can buy time right now on brokered stations. There are several around here, and most of them have open air time. There are probably similar situations in most markets.

Air America is buying time on at least one Clear Channel station.

The shortwave stations are a good bargain. Time goes for around a dollar a minute, and most of the country gets covered.

Did you read the last two words -- public airwaves? Spectrum
was considered a limited resource and government permission was
required to use it. In return, conditions were imposed.

There is no apparent shortage of newsprint for purchase.

BBC exec blasts U.S. war coverage

by Pamela McClintock

Variety.com

Tue Oct 26, 6:22 PM ET
NEW YORK -- BBC World Service and Global News director Richard Sambrook on Tuesday took the U.S. news nets to task on their own turf for "wrapping themselves in the flag" and not asking the tough questions about the Bush administration's reasons for going to war in Iraq.

Sambrook, speaking at Columbia U.'s Graduate School of Journalism, warned that such perceived partisanship of the news media may be playing a part in exposing journalists covering Iraq and other trouble spots around the globe to danger.

"Journalists are now at a greater risk than they have ever been before. Where once their neutrality was widely recognized and respected, today they are targeted and sought out, seen as high-profile representatives of their countries or cultures," Sambrook said.

Sambrook announced the formation of an international committee he will chair to investigate ways to improve safety conditions for reporters on the ground in Iraq and elsewhere. Panel will be administered by the Intl. News Safety Institute, whose membership includes most of the major U.S. TV news nets.

With Iraq considered to be the most dangerous place for journalists in recent memory, all the U.S. network and cable news divisions continue to take unusual steps to protect their personnel in Baghdad, spending hundreds of thousands of dollars on professional security forces, many of them former British commandos.

News nets -- generally unwilling to cooperate with each other -- hold a weekly phone conference call to share security info. They also are considering convening another pool to report on the war-torn city of Fallujah.

According to the Committee to Protect Journalists, 35 journos have been killed since the war began in Iraq, including one American. So far, no high-profile U.S. correspondent has been killed.

Already this year, 22 journalists have been abducted, six of them American.

By all accounts, U.S. TV correspondents in Iraq are severely restricted in their movements because of the danger of attack or kidnapping. Correspondents have again begun embedding with U.S. military forces on particular stories.

"It's extremely dangerous, and the primary frustration is that it's very difficult to report," said ABC News senior VP for news Paul Slavin.

"We are restricted by our own security people or by the U.S. military or by our own good sense," Slavin said. "I really don't want to pull out of Baghdad, but if safety gets to be such an issue, we will do so."

Sambrook is all too aware of the media's coverage of the ramp-up to war -- he was the BBC's director of news at the time of a Beeb report claiming Prime Minister Tony Blair's government had "sexed up" an Iraq intelligence dossier knowing the information was false. That led to the worst crisis in the pubcaster's history.

The report claimed Blair's government had embellished a dossier alleging that Iraq could launch weapons of mass destruction within 45 minutes.

> (There's more tolerant form that uses 16-QAM).
>

Any time you digitally modulate RF it will spread out from the carrier
frequency. Now you can use a system like QAM -16 or 64 to minimize this
but it still spreads out and occupies more spectrum than the bandwidth
allocated. Their are many switching and mixing products that cause
digitally modulated RF to spread out above and below the carrier
frequency.

From plots I've seen you are at best *(averaged) 60 dBc 30 KHz away from
carrier center. This means it will easily wipe out the adjacent channels
and weak signals 2 channels away from it.

* Peak is much worse.

For weak signal work that's 40KHz of spectrum with digital buzz for a
9-10 KHz DRM signal and that is when things are working right.

If he identifies it as commentary, I'll agree - but when he presents
information with a specific slant to promote his objectives, it
shouldn't be called news.

No, he wouldn't. The US invaded as soon as Germany couldn't keep making
the interest payments, which it did, until 1942. The New York Bankers
wanted to teach them a lesson!

The only TRF radio I ever owned certainly had an oscillator. Matter of
fact, it had two, one in the mixer stage and one BFO.

Hilarious! Now you rightards are doing nuance, doing the "depends on what the meaning of 'is' is" routine.

http://education.yahoo.com/reference/dictionary/entries/52/l0155200.html
lie
NOUN: 1. A false statement deliberately presented as being true; a falsehood.
2. Something meant to deceive or give a wrong impression.

Bush is clearly guilty of lying. He and his cohorts altered the CIA report, replacing inconclusive phrases like "might be" with definitive terms like "is." That clearly was meant to deceive or give a wrong impression (item 2 in the definition). Bush used the Nigerian white cake story in his state of the union address even after he had been told repeatedly that the story was not true. That is a false statement deliberately presented as being true (item 1). Bush is by definition a LIAR! (And those are only two out of hundreds of examples of Bush lying)

> >
> > 2) It seems a great number of people easily forget that the President
> > wasn't the only person who came to that wrong assumption. Indeed,

> > destructions.

Really? So are people who are DECEIVED by a LIAR (Bush) guilty of lying in your loony world? I suppose you would like to blame those who were deceived by Bush for Bush's lies and declare Bush innocent of lying. How convenient.

Diebold voting machines president has said repeatedly that he will
deliver the votes to the Bush oligarchy.

==========
In fact, a massive vote-fraud may likely have been attempted during the
2000 Florida presidential re-count. Diebold insiders have allegedly
admitted that a "replacement" set of vote totals was uploaded in Volusia
County, Florida, which took 16,022 votes away from Al Gore. The votes
were given back to Gore, but only because a Florida clerk noticed the
tally going down and sent out an alert. (See blackboxvoting.com for info
on these issues).

Thank you for your modification of what my signature says.

You still have to ask yourself though what is the race of the vast majority of the Enron executives, World Com executives who bankrupted ATT for over 4 billion, and the other super criminals in the business world.

Ask yourself what is the race of over 90% of the people in congress?

What is the race of the commanders in chiefs who have given the orders to attack so so so many tiny, innocent countries around the world?

Perhaps black people would do the same thing IF... they were in power in Amerikkka and had total control as Bush does. Since they are not, and probably never will be, we can't put them into the equation with how most whites think.

Hence my signature

The greatest danger of WHITE culture; is their
belief in the necessity of roguery, deception, thieving,
and extreme violence as a means of human uplift.

I just bought another vintage Autek QF-1 audio filter for my bedroom radio and they work very well but I was also looking at the Timewave and just curious if it would work in AM mode. The QF-1 is from the 70s and hard to beat. If you have a older radio and want to bring it up to par filtering wise the QF-1 and also any of the Gilfer filters (If you can find them) are the way to go. Actually the Gilfer filters are the best in my opinion. Their not in business anymore.

Just another note. I learned of these filters years ago from a ham friend
who was into QRP and he used these type units. You just plug the QF-1 into
the headphone jack of your receiver and plug your headphones into the QF-1.
To easy

Hey Steve,
This is too much! As an MSU alum I say let them have Ann Arbor and
frankly Detroit is no loss either - can only improve Michigan to be
rid of them both. Sparlingville? I recall the bridge being in Port
Huron - though mustering outside the city seems like a wise tactical
decision. Just a thought though, if we give Detroit and Ann Arbor to
Canada will it really be necessary to shell them - having those two
cities seems like more than sufficient punishment.

1509. the politics of Mosh

Newsgroup: rec.radio.shortwave
Date: 2004-10-28 00:15:18 UTC

the politics of Mosh

by kid oakland
Wed Oct 27th, 2004 at 05:47:03 GMT

What is there really to say?
Other than to straight up hand it to Eminem, Dr. Dre, Ian Inaba, Anson Vogt, Kevin Elam and Thomas Brohdal and everyone else who had a hand in the making of this video?

Watching this video is one of those experiences that just changes you. Mosh has a transformative power. Like, before I clicked on my computer this morning and downloaded the thing....well, I thought and felt one way...about Eminem, the youth vote, our troops, the state of oppositional culture in America, the meaning of this election, what George Bush means to young Americans...and afterwards, I just had huge fucking scales fall from my eyes....

I felt this powerful sense that I had just seen something calibrated exactly for this moment, something hopeful and disturbing and honest...something spoken from the crux of this hour in our history and yet resolutely looking forward. Mosh is political art that, at the same time, speaks in an authentic and specific voice. It is art that seems to bear a power to unleash something new.

This diary is attempt to get at why that is...what Mosh says and what it means.....right now...

i. Private Kelly: thinking about your rage

There is a pivot moment in Mosh that defines the entire video for me....it comes about one third of the way in, cartoon Eminem is rapping to a huge audience of men...and as the camera pulls back we see that they are soldiers in desert fatigues...

All you can see is a sea of people, some white and some black
Don't matter what color, all that matters is we gathered together
To celebrate for the same cause, no matter the weather

the camera zooms in on one soldier who is not nodding his head like the others. He is morose, angry, he is thinking as he listens to the music. This is our introduction to Private Kelly. And, as strong as the other depictions are....of Eminem himself, of Swift, of Tenant 508...I think that Private Kelly at this moment is the core of the video.

Mosh is a polemic that is intended to make you think about strong feelings; strong feelings that you have because of the political situation you find

yourself living in. Quite specifically, Mosh is intended to allow you to internalize the anger, the hate, and the rage that the videos' young protagonists feel...and yet, Mosh gets you to channel it, gets you to think about what you and they might do with that anger and hate and rage, to think about why you and they feel that anger and hate and rage.

Private Kelly's sunken-cheeked, grimaced face, angrily meditating on the music, alone in the crowd, is at the core of the politics of this video.

ii. the structure

Mosh works inside of multiple frames.

The first frame is a public school classroom on 9/11. The two are joined. One is utopian and appeals to our sense of community and shared civic responsibility. The other is dystopic and represents the use of the machinery of that utopia against itself. We don't get one without the other. That's the start point and world view of Mosh.

The second frame is Eminem/Bush.....and here we get Eminem taking on the "persona" of Bush in order to explode it and play with it. In this case, in portraying himself as GWB reading "My Pet Goat" in a school directly underneath the Trade Towers on 9/11....Eminem is laying out for us that this entire video is going to be a kind of battle between these two personas, the one exploding what we think of the other. Eminem, however, will both play a critic of Bush and, eventually put himself forward as a kind of citizen leader for us. That's important, and is implied in the humorous glimpse we get of Eminem as GWB, and later, in his shirt and tie again, signing in to vote against Bush.

The third frame is the Wall. The Wall is critical to establishing the political context of the video. The wall is where the "person" of Eminem...Marshall Mathers...is sorting out for himself what to think of the news of the day. It's personal. He's got himself up there in the form of photos from his life...and Bush is there as well, in newspaper headlines and in photos with his father. (Fwiw, the visual is also a quote of Picasso's Guernica...a blank wall, a bare light bulb, an artist depicting what he thinks about a War.) The wall is important because it implies that Marshall Mathers has been trying to think this through for a long time. That he has made it a personal project to put up what he thinks and feels about our times, with evidence from newspapers and hand-written commentary. And we see him, in stop-time animation, go through this.

The fourth frame is the protagonists: Swift, Private Kelly and Tenant 508. This frame is the story of the three protagonists whose course we will follow through the video, as they reflect on what they see and what happens to them...and then "hood up" and join the mosh mob. Swift, (or at least a cartoon version of Swift, a member of Eminem's group D12), who gets racially profiled on his way home to see his dad. Private Kelly....an alter ego for Marshall Mathers, a soldier about to be reassigend to Iraq and away from his family. And Tenant 508, a single mom about to be evicted with her children...who finds herself watching TV news at the same time as she finds

out she's been evicted.

the fifth frame: is the motion of all of the characters in the video from disenfranshisement and rage to coordinated action and showing up to vote. It is critical that this is shown as a thought-out decision: we see each character reflect and decide and then join. This links back through all the first four frames. In effect, Eminem is positing voting as a response, not simply to Bush and the war, but to 9/11, the longstanding injustices visited on our protagonists and the evidence on the Wall.

Finally, it's important to see the motion of the fifth frame as a powerful antidote to voter suppression and the "wall of fear" strategies of the GOP. If it rains let it rain, the wetter the better begins a visual arc that carries us through the video in which the voters face rain and police intimidation...and even the challenges represented by the civic character of the polling place where you have to sign in and maybe stand in a long line. If you are voting explicitly as a rejection of "fear" and "intimidation" and as a response to Iraq and 9/11, as Eminem implies we are, then why would you let intimidation and fear stop you from voting?

iii. playing with fire

On a simple and emotive level...Mosh spends much of its time using massed and hooded "mosh mobs" moving through rainy urban streets to convey a kind of "Fight Club meets Election 2004" vibe. The animations look similar to the video games Grand Theft Auto and State of Emergency....anarchic, anti-authoritarian, juvenile fantasies written as over-the-top games where violence actually becomes a funny and meaningless digital language, the equivalent of bumper cars.

Instead of getting fixed on what might be dangerous and wrong in that....it occurs to me that Eminem is simply being honest and meeting his intended audience where they are at. These fantasies are part and parcel of the mental world of young folks today. Indeed, as we speak, the vast majority of those who've seen this video right now are much more likely to live next to a Suburban Mall with a Starbucks...than down the block from Eight Mile. But this fantasy space....the urban poverty fantasy...is how Eminem gets his audience to internalize the political content of the video.

And it is critical that the video, even when it is depicting the hooded "mosh mobs"...is very clearly about something other than violence and acting out rage. Just because it uses that vocabulary and visual palette, does not mean its audience will not fully understand that it is not about that. In fact, I'd argue that that is part of the point of Mosh.....to take its audience from a world of juvenile fantasy that plays off their dystopic feelings...to a more thoughtful and programatic response to what they are experiencing in the real world. In effect, Eminem is using Grand Theft Auto and Fight Club to bring his viewers out of inchoate rage and anger, and showing them how to create a more thoughtful, strategic, coordinated response. A political response.

iv eminem's politics

There is a brilliant line in this video that just keeps bouncing around in my head:

Let me be the voice, and your strength, and your choice
Let me simplify the rhyme, just to amplify the noise
Try to amplify the times it, and multiply it by six
Teen million people are equal of this high pitch
Maybe we can reach Al Quaida through my speech....

at which point we see Tenant 508 turning a radio dish from the top of a building.

On top of advocating a thought-out, political, pragmatic way out for his audience's rage and anger....voting on November 2nd....Eminem, in this passage expresses something that goes beyond that. In essence, Eminem is positing a world in which thoughtful citizens who are victims of the powers that be, might actually be able to communicate with one another more effectively than those powers. It is a decentered, free speech, ground-up democracy that Eminem is preaching here.

This is powerful stuff. And there are more hints of this in other parts of the video. November 2nd is not depicted as an end point for the political struggle Eminem describes...it is just a beginning. It's not an answer, it's just a necessary first step. Part of which is a rebirth of oppositional culture and informed participatory democracy...and part of which is a recentering of the political process on the voices of those who have not been listened to.

We mosh for the future of our next generation, to speak and be heard, Mr. President, Mr. Senator

Can you hear us?.....

v there's so much more here

a.. From the amazing content of the wall...Bush knew...Sick wounded troops held in squalor...Senate upholds ban on Coffin photos...Bush Tax Cuts help Rich...

a.. to the brilliant depiction of Bin Laden as cardboard cutout in a news st udio, hiding Cheney and Rumsfeld cheerfully chatting away (a move which highlights how Bin Laden has been used as a bogeyman.)

a.. to the personalization of Eminem's battle with Bush along the lines of one's relationship with one's father

a.. to Swift's relationship with his own father, and how Swift's dad joins him to vote
a..
a.. the amazing scene with Private Kelly on the steps with his angry wife and kids

a.. and how Swift and Private Kelly use the fire hose to defuse the Police Officers and riot police blocking the mosh mob's path to vote....

a.. and finally, Eminem's posture to the flag. His adoption of it..and his depiction of it flying in the rain and as having been stolen by Bush.

And, finally, these two quotes which are destined to reverberate this election season and forward:

And as we proceed, to mosh through this desert storm, in these closing statements, if they should argue, let us beg to differ, as we set aside our differences, and assemble our own army, to disarm this weapon of mass destruction that we call our president, for the present
and this:

If it rains let it rain, yea the wetter the better
They ain't gonna stop us, they can't, we're stronger now more then ever,
They tell us no we say yea, they tell us stop we say go,
Rebel with a rebel yell, raise hell we gonna let em know
Stomp, push up, mush, fuck Bush, until they bring our troops home
vi. mosh the vote

For me, I think the honestly and directness of this video, and the way Eminem shows himself to be forthrightly political: a figure who reads, and thinks and tries to figure things out, are startling and add to its power. The fact that it begins and ends with the public school kids. The fact that Eminem does not sugar coat the situation we are in right now. A dystopic utopia....that we need to struggle to find our way out of only makes me respect it more.

In some ways as confused a political metaphor as Moshing is, it is the right one for this time and place. We do indeed have to muddle and fight our way through the fog of this moment, this dystopia...to see that the "clear eyed" leader we've been following has been anything but. We need to reject him to reclaim our damaged utopia and begin to rebuild it:

Look in his eyes, it's all lies, the stars and stripes
They've been swiped, washed out and wiped,
And Replaced with his own face, mosh now or die

Which both plays off of rap's fatalism...and plays into the quite American sentiment:

Live free or die.

I think the most brilliant aspect of Mosh is simply its imperative to think about one's rage and to channel it. I keep coming back to Private Kelly in that crowd.

And I wonder, if today, in Iraq, some real Private Kelly is getting a chance to see this video for the first time...and what he or she thinks...good or bad....and what rage he or she must feel face to face with the very real, very troubling dystopia that is the United States occupation of Iraq.

Your points are noted Howard and will be taken into consideration as tactical preparations are being made.

I just sent out an email requesting that all units try to come up with as much tracer ammunition as they can, in a most expeditious manner.

Several individuals have responded that they have as many as 6000 rds of ammunition apiece, and a lot of armor piercing rds.

Still looking for more 50 cal. rifles and ammunition for same.

Please monitor the Alpha freequency for more updates and plans.

Steve,
Yes, we are a representative republic - but without standing in
defense of the previous poster, this is a form of a democratic
government in which we elect people to handle the affairs of
government versus direct participation. Another thing that most folks
aren't aware of is that our voting rights are not established in the
Bill of Rights and we did not have 'universal sufferage' until the
1960's. Though we call ourselves a "Developed Nation" we are in fact
still developing - which I think is a good thing.

Enjoy the eclipse - it is too cloudy to view from Southern California.

We all know Kerry never tells the truth. He hates America. You don't
have to tell us. We know it. We also know CBS is not so secretly on
his side. It's so damn obvious. It is. Really. Kerry has
authorized ABC to start working for him too. You'll see what I'm
talking about on election eve. The big networks are in his pocket.
They're all commies. Every damn one of them. Most scientists are
communists too. It's obvious. They're all French. SOB's. Why
don't you French F'in scientists love America? Get OUT!!!!

This is pure b.s. There were and are no WMDs in Iraq. The thefts you refer have nothing to do with WMDs, no matter how much you try to make it so. It just ain't so.

I thought those who support this war had moved on to "it was a good thing to take out a dictator" and other such explanations that departed from the first two unfounded explanations (the other being the Al Quaeda link that was also b.s.).

Al Quaeda has moved into Iraq since the invasion: handy place to confront Americans.

The only place on the cabinet that gets warm at all is the area of the
vents over the transformer on my unit. Front panel does not get warm.

The one warm spot on top is about 2 degrees over room. If it was any
less you would not be able to tell it was warm.

>There are those who plan to WRITE IN Jesus Christ for president, though
>He is not expected to win. There are those who have already voted that way!

How do you cast a write-in vote on an electronic voting machine?

I've always heard that Americans were allowed to write in anyone they choose when they votee. However, Ohio has already refused to let voters write-in a candidate when the voters wanted to cast a write-in vote. Ohio's refusal was because "the electronic voting machines aren't set up that way". Because "that candidate isn't on the voting machine".

So now, Americans have somehow lost the right to vote for anyone they choose and can now vote only for governmentapproved candidates that are already listed on the voting machines.
Even though there was never any law passed outlawing voting for write-in candidates, that I'm aware of.

Al Qaeda is the one that declared war on America by causing the 9/11 attacks
and then claiming that they were the ones that did it.

And wasn't it Al Qaeda that sided with the ones who said that Bush wasn't
elected by Americans, but stole the election by refusing to let the opposing
party of Democrats vote.

As I remember it, it was.

We have the Diebold touch screens here in L.A....for each office, right
under the candidates, is a blank space. Touch it, and an onscreen
typewriter keyboard shows up...just tap in the name and you're done.

> Stephen Howie,
> Reading, U.K

SH,

As you have suggested, a 'phase-in' Implementation of DRM over
a number of years:
* Years 1-5 each Shortwave Band would have 25% dedicated to DRM.
* Years 6-10 each Shortwave Band would have 50% dedicated to DRM.
* Years 11-15 each Shortwave Band would have 75% dedicated to DRM.

* After Year 16 each Shortwave Band would have 100% dedicated to DRM.

IIRC: The current 'channel' Spacing on the Shortwave Bands is 5 kHz.

With the phase-in implementation of DRM, wouldn't a 10 kHz, 20 kHz
or even 25 kHz be a more acceptable and practical 'channel' Spacing
to reduce interference from any 'adjacent' Channels.

~ RHF

Fortunately for dxAce that person is me and I think DRM should go into
the dust bin of bad ideas.

> Technology moves on and DRM (or another digital radio technology)
> will for sure make its way to the ether.

Well, DRM uses digital technology and it "works" but the claims are
false. This technology is no better than what we have now in total.
Some things about it are better others things are worse.

Greetings! What a shame. Losing another shortwave station of their quality is not an easy loss. I hate to see shortwave get the short end of newer technologies, but alas, change is inevitable. Jon.

DRM modulation appears to make conversion efficacy worse ~57 - 65%
compared to AM ~65 - 74%.

| Steve,
| Yes, we are a representative republic - but without standing in
| defense of the previous poster, this is a form of a democratic
| government in which we elect people to handle the affairs of
| government versus direct participation. Another thing that most folks
| aren't aware of is that our voting rights are not established in the
| Bill of Rights and we did not have 'universal sufferage' until the
| 1960's. Though we call ourselves a "Developed Nation" we are in fact
| still developing - which I think is a good thing.
|
| Enjoy the eclipse - it is too cloudy to view from Southern California.

|
| Howard

We're in the same boat, Howard - fog and more fog here in the
South Twin Cities tonight. And you're right - the nation is, indeed,
involving, and we employ a democratic process to ensure prudent
(well, prudent-ISH) governance.

73,

YO JIM BO,

Is Peter Wallsten a Christian ?
- Then how would he know what is in the Hearts of Christians ?

Is the LA Times a Christian Newspaper ?
- Then why would any Christian read or pay attention to the LA Times ?

We have Christian Writers and Christian Newspapers to Read
and to Gain Understanding from for 'guidance' in Living "Our"
Christ Centered Lives.

Our Church 'members' {Not 'our' Church} are Active in
"Getting-Out-the-Christian-Vote" here in our town OK-Land,
Cali-4-Ni-A.

First - We have already canvassed the Neighborhoods for Christian
Voters who will be Voting for "Our" President George "W" Bush.

Second - We have already assisted a hundred or more Christian Voters
in Sending in their "Absentee Ballots". {What Would Jesus Do ?}

Third - Our Church 'members' have Volunteered to help drive a
hundred or more Christian Voters to the Poles on Election Day
to Vote. {Christ in Action in Our Lives.}

This is just one small group of Church 'members' from one Church
in one Neighborhood here in OK-Land, Cali-4-Ni-A. I know of
about 50 other Groups of Church 'members' here in town; that
are doing the same thing: Getting-Out-the-Christian-Vote for
"Our" President George "W" Bush.
{Christians oming Together To Do God's Work.}

Think-About-It: Multiply Christian-Action this across the
State and across the Nation; in every Village, Town and City.
{It's a God Thing!}

Please Note: That Cali-4-Ni-A is a Democrat 'controlled' State.
We know We will not 'win' Cali-4-Ni-A. But we know that the
VOTE of Every Christian Will Be Counted in 'every' State.
{God's Will Be Done!}

It is the Duty and Responsibility of Every Christian Voter
to Vote for a Man of God.
{"Our" President George "W" Bush is that Man.}

Just Vote - It's a God Given Right - Amen ~ RHF
.

FO&A,

Connecting your TV 'type' Coax Cable [Shielded] SWL Loop Antenna
to your Table Top Shortwave Receiver or 'Portable' AM/FM/Shortwave
Radio.

Table Top Shortwave Receivers:
For "Receivers" with a SO-239 Jack for the External Antenna
you can use an "F" Jack to PL-259 Plug (SO-239 Adapter)
RadioShack Catalog # 278-258

'Portable' AM/FM/Shortwave Radios:
For "Radios" with a 1/8" Mono-Jack for the External Antenna
you can use an "F" Jack to 1/8" Plug (1/8" Mono-Jack Adapter)
RadioShack Catalog # 278-257

~ RHF
.

uncle arnie wrote:

> The U.S.A. gets "."
> The UN and the UK doesn't. Why?

That little quote was on a show tonight as an example of United States Imperialism even in the punctuation arena. A Scots professor was speaking of the history of of Imperialist expansion throughout history and how the US is now emulating the Romans while denying any Imperialist expansion whatever.

The invasion of the Phillipines by the US was quoted as a comparison of the Iraq situation now.

==========
Talk about war being ï¿½hell,ï¿½ this war beats the hottest estimate ever made of that locality. Caloocan was supposed to contain seventeen thousand inhabitants. The Twentieth Kansas swept through it, and now Caloocan contains not one living native. Of the buildings, the battered walls of the great church and dismal prison alone remain. The village of Maypaja, where our first fight occurred on the night of the fourth, had five thousand people on that dayï¿½now not one stone remains upon top of another. You can only faintly imagine this terrible scene of desolation. War is worse than hell.

http://www.filipino-americans.com/cgi-bin/redirect.cgi?url=filamwar.html

Dragged by Galloping Horses. During the war, torture was resorted to by American troops to obtain information and confessions. The water cure was given to those merely suspected of being rebels. Some were hanged by the thumbs, others were dragged by galloping horses, or fires lit beneath others while they were hanging.

Another form of torture was tying to a tree and then shooting the suspect through the legs. If a confession was not obtained, he was again shot, the day after. This went on until he confessed or eventually died.

Villages were burned, townfolks massacred and their possessions looted. In Samar and Batangas, Brigadier General Jacob H. Smith and General Franklin Bell, respectively, ordered the mass murders in answer to the mass resistance.

Google shows you've used the term 'tard in over four hundred postings as of yesterday. You must have heard that word on the radio when you had your last major stroke. That would explain your inability to get it out your brain. It's burned there FOREVER.

'tard 'tard 'tard...

It must be hell having that going through your thoughts as you try and sleep at night. It's no wonder you don't sleep. The lack of sleep also explains your irrational behavior and the need to have thousands of .223 cartridges hidden in your attic.

Still planning on 'rectifying' the voters in Ohio on election day, you lunatic?

Andrew Moseley (G7VOT) on October 27, 2004

Ofcom and the Radio Society of Great Britain are pleased to announce that all necessary procedures required for early access to the 7.1 to 7.2MHz spectrum for all UK radio amateurs have been finalised and that access is allowed from 0100UTC on Sunday 31 October 2004. Early access is granted on a Secondary (non-interference) basis using a maximum of 26dBW (400 watts) PEP.

Notices of Variation for the Foundation, Intermediate and Full licences have been published on the Ofcom website. orse code modes are used between 7.1 and 7.2MHz. B It is recommended that for the time being only voice and Mand planning issues on 7MHz will be kept under regular review and will be dependent on the number of administrations granting early access to this band prior to full Primary access on 29 March 2009.

The RSGB would like to offer its appreciation to all parties involved in the consultations, in particular the broadcasting industry, the UK Ministry of Defence, the Radiocommunications Agency and its successor Ofcom.
Please note that access to the extra 100kHz is only allowed from 0100UTC, and not midnight UTC, on Sunday morning. Or, put another way, from 2.00am local time, at which time the clocks are put back by one hour. Local time will then be 1.00am, the same as GMT or UTC.

The above article is care of the RSGB Members website
****

Ofcom hereby gives notice under section 1(4) and section 1E of the Wireless Telegraphy Act 1949 to holders of the Amateur Radio (Full) Licence that, with effect from 0100 on 31 October 2004 , the terms, provisions and limitations of each licence shall be varied as follows:

In this notice the "Booklet" means the Amateur Radio (Full) Licence Terms, Provisions and Limitations Booklet BR68, the terms of which form part of the Licence. As from 0100 on 31 October 2004 , each licence shall be read and construed as if the reference in the Licence to the Booklet were a reference to the Booklet containing the following changes. (1) Sub clause 8(4) shall be deleted and replaced by the following words

"For the purposes of sub-section 1(4) of the Act, this Licence may be revoked, or its terms, provisions or limitations varied, by a notice in writing of Ofcom, served on the Licensee, or by a general notice addressed to all holders of an Amateur Radio (Full) Licence published on the Ofcom web site or broadcast nationally by the British Broadcasting Corporation."

(2) the following extension to the Schedule were inserted after the row 7.000-7.100 MHz (the notes to the Schedule shall remain unchanged).

1 7.100
-
7.200

2 Secondary. Available on the basis of non-interference to other services
(inside or outside the United Kingdom)

And a very fun 6 weeks it was, especially compared to
all the other branches. I worried almost all the way
through up until I got to the "confidence course"
(AF version of an obstacle course) and had so much
fun doing that I even enjoyed that last week. Ended
up being an honor grad, too.

I hate to admit it, but it's true, USAF basic is nothing
compared to all the other branches. It's almost too easy.

Um, I can't agree. It appears that there -are- no WMDs in Iraq, true, but I doubt that you can substantiate, as you say above, that there -were- no WMDs. As a matter of fact, depending on one's horizon, it is certain that there were WMD's in Iraq. What is a matter of reasonable dispute is when there -ceased- to be WMDs in Iraq.

You are also incorrect in suggesting unequivocally that the Al Queda link is BS, as there's plenty of evidence of a connection, and, in fact, the report of our Senate Intelligence Committee acknowledged a connection. The -extent- of that connection is certainly in doubt, as is whether Saddam provided any meaningful support, but there is more than enough evidence to debunk claims that a connection is BS. In addition any such connection was not, as you also suggest, given as a serious reason the invasion.
>
> Al Quaeda has moved into Iraq since the invasion: handy place to

> Americans.

Absolutely, and I'm glad to see you get that part of the plan. Most critics do not.

> Other frequencies sound open. One street gang related pirate station was
> operating on an open FM frequency here. We also have a couple of reletively
> new low power UHF stations.

"Sound" open and being open are two different things. I've had this didact before, but the gist of it is that the channels that "sound" open are only to allow that channel to be allocated in other areas, which in the Class C area that Chicago is in may be far, far away. Putting an allocation on this "open" channel would result in interference to these far-flung operations, thus reducing their coverage area to less than what they're allocated to serve. Same goes for the pirate. If you look at a frequency search map, using the specified minimum distances to each conflicting allocation, you'll find that there is some apparent "white" areas as a result of the overlaps (or actually, the effort to make sure they don't overlap).

>> > Should the fairness doctrine apply in markets in which there are open
>> > frequencies and channels?

>> No, because a licensee should do their part to represent all divergent
> views.

> I'm not sure I understand. Are you saying the fairnss doctrine should not
> apply in those markets?

I am not. Open channels (assuming that there are any, which certainly isn't the case in Chicago) mean that there are only a few possible voices that might offer

diversity. But there's still a finite limit to how many voices there will be. This is different from printed matter or public oratory, where there is no self-limiting property in the exersize of one's free speech rights. With broadcasting, the existence of one station prevents the free speech rights of those other "potential" operations on the same channel, thus depriving these "others" of their free speech rights. Since the "others" don't have the opportunity, then neither should the operator of the facility which abridges the "others" of theirs.

>> Satellite spectrum is, by definition, not broadcast spectrum....it's just
>>a band that some operators choose to operate un-encrypted.
>> And subscription satellite is another animal altogether, like cable.

> Right. And viewers/listeners don't really make the distinction between
> cable and satellite and broadcasting anymore. If 90% of a person's TV
> channels are uneffected by the fairness doctrine, does the fairness doctrine
> have any effect on the viewer?

Doesn't matter. People pay for subscription services. They get what they pay for, and if they don't like what they're hearing, they can cancel. Broadcasting is different. You can get conventional radio using devices which are readily available, require no real skills to install or use, and cost at least an order of magnitude less to acquire. For those who have satellite receivers, after having made the effort, if they think it's the same, then it is for them. But that doesn't make it so.

> If the fairness doctrine is really a good idea, shouldn't it effect every
> station a consumer gets?

As above. Broadcasting is different. The spectrum occupied is granted, in trust, by the people of the United States. Broadcasters should be held accountable for serving all those people. Whether they like it or not.

> Just why is the fairness doctrine a good idea?

Because we've seen what happens when it's not in place.

> Covering the country is not the same as getting gross impressions.
> It's hard to say exactly how many people listen. But, as far as the rate
> goes, it used to be alot higher back about 20 years ago when stations such
> as WRNO and WINB were selling time. Since then, there must have been at
> least fifteen SW brokered transmitters going on the air. It's a buyers
> market now.

Well, then, that's not exactly what I'd call a good investment, is it? Tell you what....pay me $500 to spread to the world what you have to say. I promise I'll tell at least 15 people a day about your message for a month. But I won't tell you how many people I'll tell, and those that I'll tell may have no means by which to acquire the service or goods you're selling, at that. Deal?

There's also the possibility that DRM or any digital shortwave system
won't always be free to the listener. It could become like subcription
satellite radio, where the user has to pay for the service before the
receiver is activated.

1580. UN and IAEA behind the planned CBS News Election Eve "Phony" Story about Missing Explosives

Newsgroup: rec.radio.shortwave
Date: 2004-10-28 07:05:04 UTC
From: rhf-newsgroups@pacbell.net
Message-ID: <ff3145e8.0410272305.2a8a731c@posting.google.com>
Source record: 1525

UN and IAEA are behind the planned CBS News Election Eve "Phony"
'bomb shell' Announcement about the Missing Explosives Story as
an Attack on US President George "W" Bush.

YO JIM BO,

The Truth Shall Set You Free from the UN's Al Qaeda like "News Media
Attack" to 'influence' the outcome of the US Presidential Election.

Now the "Rumors" {Off the Record - Background Information} is
'out' that Kofi Annan the Secretary-General of the United Nations;
and Dr. Mohamed El Baradei the Director-General of the International
Atomic Energy Agency" (IAEA); along with Hans Blix are all behind
the leaking and promotion of this 'story'.

UN and IAEC are behind the planned CBS News Election Eve Missing
Explosives Story to Attack President George "W" Bush and 'influence'
the US Elections.

CBS NEWS PLANNED BUSH MISSING EXPLOSIVES STORY FOR ELECTION EVE
http://www.drudgereport.com/
* CBS - "60 Minutes" - Dan Rather PLANNED an Election Night
Bomb Shell "Hit Piece" on President George "W" Bush.
* News of missing explosives in Iraq -- first reported in
April 2003 -- was being resurrected for a 60 MINUTES Election
Eve Broadcast designed to Knock the Bush Administration into
a Crises Mode...

YES - CBS News Knowingly LIED about 350 Tons of High Explosives
Looted during early US Occupation. {A Story that is over a year old.)

NBC News Reports: CACHE OF EXPLOSIVES VANISHED FROM SITE IN
IRAQ BEFORE TROOPS ARRIVED...
http://www.drudgereport.com/nbcw.htm
* NBCNEWS reported: The 380 tons of powerful conventional
explosives were already missing back in April 10, 2003 --
when U.S. troops arrived at the installation south of Baghdad!
* An NBCNEWS crew embedded with troops moved in to secure the
Al-Qaqaa weapons facility on April 10, 2003, one day after the
liberation of Iraq.
* According to NBCNEWS, the HMX and RDX explosives were already
missing when the American troops arrived.
* NBC NEWS Jim Miklaszewski quoted one official:
"Recent disagreements between the US Bush Administration and
the 'head' of the UN International Atomic Energy Agency makes

this announcement appear Highly Political."

Except that by definition, a TRF cannot have a mixer stage, it has no
IF stages. that why it is called a TRF.

I think the President summed it up best when he said something along the lines of "A Monday morning quarteback
never led a team to victory."

John Fraud Kerry is such a quarterback. And, when he *did* have a chance to lead his team to victory, he

fraudulenty obtained some awards, and left his men on the battlefield just as quickly as he could. A *real*
quarterback would have finished the game.

Strange, that's not what I've heard about that. Do you have a source for
this?

If you look at the EMWG (http://www.emwg.info/), you see that the BBC
worldservice is broadcasting at 1296 Khz both in AM and in DRM: 500 KW
in AM and 70 KW in DRM.

AFAIK, both broadcasts have a simular service-area. (can somebody
acknowledge or deny this?)

Anycase, concept-wize, it is a bit strange as DRM fills up it's 9 or 10
KHz bandwidth much more evenly then AM -which is more centered around
the center-frequency). So, you should have much more "power/Hz" over the
complete 9 or 10 Khz frequency-channel then in the case of AM.

Compair it to satellite. The energy-usage of a satellite if much better
if a transponder is "filled up" with one single carrier then if you have
multiple smaller carriers on that transponder.

Correct me if I am wrong!

Are you talking about DRM or IBOC/AM?

The bandwidth of a DRM station is exactly the same as a AM station (9
KHz on MW and MW, 10 KHz in SW).
It's IBOC/AM where there are digital signals outside the "normal" 10 KHz
bandwidth in the US MW bandplan.

YO JIM BO,

Here are the latest 'facts' about what CBS "Intended" to do with
this FAKE News Story concerning the Missing Explosives in Iraq.

PART I - "Leaks Hastened Report on Missing Explosives" - by Howard Kurtz
Washington Post Staff Writer - Thursday, October 28, 2004

* On Sunday night, New York Times Executive Editor Bill Keller
told Jeff Fager, executive producer of CBS's "60 Minutes," that the
story they had been jointly pursuing on missing Iraqi ammunition
was starting to leak on the Internet.
"You know what? We're going to have to run it Monday," Keller said.

* The article has also sparked criticism of the two news organizations
from some conservatives, who accuse the Times and CBS of orchestrating
a late hit against Bush.

* NYT Editor Keller said "60 Minutes" executives asked the newspaper
to hold the story until the last Sunday two days before the Election;
so they could report it the same day, and "we said we weren't
comfortable doing that because it wouldn't give the White House
a fair opportunity to respond."

* CBS - 60 Minutes Fager dismissed criticism of the timing as "absurd,"

* CBS - 60 Minutes Fager said it was "incredibly unfair" to link
the ammunition story to the earlier "60 Minutes Wednesday" Fraudulent
Report on Documents {Rather-Gate} about Bush's National Guard
service, Which CBS Has Admitted It Can NOT Authenticate.

* The Bush Campaign release Tuesday accused the NYT of publishing
a "false story,"

* Weekly Standard Editor Bill Kristol called CBS's plan to report
the story this Sunday two days before the Election "really kind
of stunning."

* The Wall Street Journal editorial page questioned the article's timing.

* Fox News' Bill O'Reilly questioned whether it was "a legitimate
story or a dirty trick,".

* Tony Snow from Fox News said the article "looks pretty bogus"
and is "an embarrassment to the New York Times and also CBS."

* Three NYT Reporters wrote the 'story' Monday, days after
getting a tip from a CBS "60 Minutes" producer.

PART II - Russia tied to Iraq's missing arms - by Bill Gertz
THE WASHINGTON TIMES - 28 OCT 2004

* Russian special forces troops moved many of Saddam Hussein's
weapons and related goods out of Iraq and into Syria in the weeks
before the March 2003 U.S. military operation,
The Washington Times has learned.

* The Russian support to Iraq reveal that Saddam's government
paid the Kremlin for the special forces to provide security for
Iraq's Russian arms and to conduct counterintelligence activities
designed to prevent U.S. and Western intelligence services from
learning about the arms pipeline through Syria.

* The Russian arms-removal program was initiated after Yevgeny
Primakov, the former Russian intelligence chief, could not persuade
Saddam to give in to U.S. and Western demands,

* The most important and useful arms and explosives appear to have
been separated and moved out as part of carefully designed program.
"The organized effort was done in advance of the conflict,"

* The Russian forces were tasked with moving special arms out
of the country.

* Foreign intelligence officials believe the Russians worked
with Saddam's Mukhabarat intelligence service to separate out
special weapons, including high explosives and other arms and
related technology, from standard conventional arms spread out
in some 200 arms depots.

* The Russian weapons were then sent out of the country to
Syria, and possibly Lebanon in Russian trucks.

* The Russian units were dispatched beginning in January 2003
and by March had destroyed hundreds of pages of documents on
Russian arms supplies to Iraq while dispersing arms to Syria,

* The Russian "spetsnaz" or special-operations forces were
under the GRU military intelligence service and organized large
commercial truck convoys for the weapons removal,

* On Sunday night, New York Times Executive Editor Bill Keller
told Jeff Fager, executive producer of CBS's "60 Minutes," that the
story they had been jointly pursuing on missing Iraqi ammunition
was starting to leak on the Internet.
"You know what? We're going to have to run it Monday," Keller said.

* The article has also sparked criticism of the two news organizations
from some conservatives, who accuse the Times and CBS of orchestrating
a late hit against Bush.

* NYT Editor Keller said "60 Minutes" executives asked the newspaper
to hold the story until the last Sunday two days before the Election;
so they could report it the same day, and "we said we weren't
comfortable doing that because it wouldn't give the White House
a fair opportunity to respond."

* CBS - 60 Minutes Fager dismissed criticism of the timing as "absurd,"

* CBS - 60 Minutes Fager said it was "incredibly unfair" to link
the ammunition story to the earlier "60 Minutes Wednesday" Fraudulent
Report on Documents {Rather-Gate} about Bush's National Guard
service, Which CBS Has Admitted It Can NOT Authenticate.

* The Bush Campaign release Tuesday accused the NYT of publishing
a "false story,"

* Weekly Standard Editor Bill Kristol called CBS's plan to report
the story this Sunday two days before the Election "really kind
of stunning."

* The Wall Street Journal editorial page questioned the article's timing.

* Fox News' Bill O'Reilly questioned whether it was "a legitimate
story or a dirty trick,".

* Tony Snow from Fox News said the article "looks pretty bogus"
and is "an embarrassment to the New York Times and also CBS."

* Three NYT Reporters wrote the 'story' Monday, days after
getting a tip from a CBS "60 Minutes" producer.

PART II - Russia tied to Iraq's missing arms - by Bill Gertz
THE WASHINGTON TIMES - 28 OCT 2004

* Russian special forces troops moved many of Saddam Hussein's
weapons and related goods out of Iraq and into Syria in the weeks
before the March 2003 U.S. military operation,
The Washington Times has learned.

* The Russian support to Iraq reveal that Saddam's government
paid the Kremlin for the special forces to provide security for
Iraq's Russian arms and to conduct counterintelligence activities
designed to prevent U.S. and Western intelligence services from
learning about the arms pipeline through Syria.

* The Russian arms-removal program was initiated after Yevgeny
Primakov, the former Russian intelligence chief, could not persuade
Saddam to give in to U.S. and Western demands,

* The most important and useful arms and explosives appear to have
been separated and moved out as part of carefully designed program.
"The organized effort was done in advance of the conflict,"

* The Russian forces were tasked with moving special arms out
of the country.

* Foreign intelligence officials believe the Russians worked
with Saddam's Mukhabarat intelligence service to separate out
special weapons, including high explosives and other arms and
related technology, from standard conventional arms spread out
in some 200 arms depots.

* The Russian weapons were then sent out of the country to
Syria, and possibly Lebanon in Russian trucks.

* The Russian units were dispatched beginning in January 2003
and by March had destroyed hundreds of pages of documents on
Russian arms supplies to Iraq while dispersing arms to Syria,

* The Russian "spetsnaz" or special-operations forces were
under the GRU military intelligence service and organized large
commercial truck convoys for the weapons removal,

The Russians Did It ! -&- CBS Blew It !

Here are the latest 'facts' about what CBS "Intended" to do with
this FAKE News Story concerning the Missing Explosives in Iraq.

PART I - "Leaks Hastened Report on Missing Explosives" - by Howard Kurtz
Washington Post Staff Writer - Thursday, October 28, 2004

* On Sunday night, New York Times Executive Editor Bill Keller
told Jeff Fager, executive producer of CBS's "60 Minutes," that the
story they had been jointly pursuing on missing Iraqi ammunition
was starting to leak on the Internet.
"You know what? We're going to have to run it Monday," Keller said.

* The article has also sparked criticism of the two news organizations
from some conservatives, who accuse the Times and CBS of orchestrating
a late hit against Bush.

* NYT Editor Keller said "60 Minutes" executives asked the newspaper
to hold the story until the last Sunday two days before the Election;
so they could report it the same day, and "we said we weren't
comfortable doing that because it wouldn't give the White House
a fair opportunity to respond."

* CBS - 60 Minutes Fager dismissed criticism of the timing as "absurd,"

* CBS - 60 Minutes Fager said it was "incredibly unfair" to link
the ammunition story to the earlier "60 Minutes Wednesday" Fraudulent
Report on Documents {Rather-Gate} about Bush's National Guard
service, Which CBS Has Admitted It Can NOT Authenticate.

* The Bush Campaign release Tuesday accused the NYT of publishing
a "false story,"

* Weekly Standard Editor Bill Kristol called CBS's plan to report
the story this Sunday two days before the Election "really kind
of stunning."

* The Wall Street Journal editorial page questioned the article's timing.

* Fox News' Bill O'Reilly questioned whether it was "a legitimate
story or a dirty trick,".

* Tony Snow from Fox News said the article "looks pretty bogus"
and is "an embarrassment to the New York Times and also CBS."

* Three NYT Reporters wrote the 'story' Monday, days after
getting a tip from a CBS "60 Minutes" producer.

PART II - Russia tied to Iraq's missing arms - by Bill Gertz
THE WASHINGTON TIMES - 28 OCT 2004

* Russian special forces troops moved many of Saddam Hussein's
weapons and related goods out of Iraq and into Syria in the weeks
before the March 2003 U.S. military operation,
The Washington Times has learned.

* The Russian support to Iraq reveal that Saddam's government
paid the Kremlin for the special forces to provide security for
Iraq's Russian arms and to conduct counterintelligence activities
designed to prevent U.S. and Western intelligence services from
learning about the arms pipeline through Syria.

* The Russian arms-removal program was initiated after Yevgeny
Primakov, the former Russian intelligence chief, could not persuade
Saddam to give in to U.S. and Western demands,

* The most important and useful arms and explosives appear to have
been separated and moved out as part of carefully designed program.
"The organized effort was done in advance of the conflict,"

* The Russian forces were tasked with moving special arms out
of the country.

* Foreign intelligence officials believe the Russians worked
with Saddam's Mukhabarat intelligence service to separate out
special weapons, including high explosives and other arms and
related technology, from standard conventional arms spread out
in some 200 arms depots.

* The Russian weapons were then sent out of the country to
Syria, and possibly Lebanon in Russian trucks.

* The Russian units were dispatched beginning in January 2003
and by March had destroyed hundreds of pages of documents on
Russian arms supplies to Iraq while dispersing arms to Syria,

* The Russian "spetsnaz" or special-operations forces were
under the GRU military intelligence service and organized large
commercial truck convoys for the weapons removal,

Call to cut greenback in Beijing coffers

The dominance of United States dollars in the mainland's foreign exchange reserves poses a serious financial risk to the country, the China Daily warned.

A likely continuing fall in the dollar's value will cause substantial financial losses for the mainland unless policy makers reduce the high proportion of dollars in the country's foreign reserves, the editorial, by Jiang Ruiping, director of China Foreign Affairs University's Department of International Economics, said.

The editorial recommended that policy makers trim the ratio of US dollars in the foreign reserves in favour of the euro and the Japanese yen to avert the impact of a possible "US dollar crisis'' on China's economy.

"It is becoming more and more evident that the possibility of a further slump of the US dollar is increasing,'' the editorial said.

"To ward off foreign exchange risks, China needs to readjust the current structure, increasing the proportion of the euro in its foreign exchange reserves.''

The recent weakness of the dollar had wiped out more than US$10 billion (HK$78 billion) from the mainland's foreign exchange reserves, the editorial said, adding that more losses are likely unless the current reserve currency configuration is altered.

At the moment, US dollars make up two-thirds of the reserves.

Restaurant isn't ducking the question

Beijing - Customers at a restaurant in southern China are expressing their opinions about the US presidential elections by choosing duck dishes named after the candidates.

On the menu are Bush duck, a spicy concoction to match his "war-mongering personality", and Kerry duck, a more bony version with sauce, in line with his "keen-witted and capable nature", according to the Yangcheng Evening News.

So far, Kerry duck is ahead with 53%, while Bush duck trails with 47%.

"It's very interesting," said one customer. "I pick Kerry because he pledged that he will stop the anti-terrorist war that Bush started."

The restaurant owner said customers who voted for the winning candidate would receive a small prize.

Unrestricted Warfare: China's Master Plan to Destroy America

Did you know that China`s military manual first suggested the idea of bombing the World Trade Center?

As incredible as it may be to believe, three years before the Sept. 11 bombing of the World Trade Center a Chinese military manual titled Unrestricted Warfare touted such an attack - suggesting it would be difficult for the U.S. military to cope with.

On Thursday, Oct 28th, Don Imus opened his morning radio show by blasting Kerry as a liar who "can't tell the truth about anything." He mentioned Kerry's Boston Marathon lie, his baseball lie, and then went on to talk about the bogus explosives story, calling it "Kerry's current big lie."

And this is from a guy who says he's going to vote for Kerry!

In the meantime, the Democratic blogs are starting to blame the Republicans for the explosives story, saying it was planted by Carl Rove in order to embarrass the Democrats!!!!

Yep, just like the CBS forged documents were a Rove operation. Uh huh.

Can you say "shot down in flames?" That's where Kerry and his pals are headed for the final weekend of their campaign.

Outsourcing is OK. We'll deal with it and win. We can do that in
America. If we create an artificial business environment to protect
jobs than we'll eventually die. Let capitalism take it's course.
I'll put America up against anyone any day. We'll win eventually and
get through the hard times. Don't refute it. I've got 200+ years of
proof.

Imus is a radio personality. Me 'thinks yer tin-foil hat is a wee bit
askew.

LMAO at the "base my political views on what a disk jockey says"
'tard.

BTW - go buy a WinRadio.

www.winradio.com

Check out the 303 and 313 series radios. You need a notch filter.

Propagation on 9580 is almost always quite good, and has been for years.

Mileage may vary if you are toting a portable.

(Word not found in the Dictionary and Encyclopedia. Please try the
words separately:
representative republic)

Liberal democracy is a form of representative democracy where elected representatives that hold the decision power are moderated by a constitution that emphasizes protecting individual liberties and the rights of minorities in society, such as freedom of speech and assembly, freedom of religion, the right to private property and privacy, as well as equality before the law and due process under the rule of law, and many more.

Such constitutional rights (also named liberal rights) are guaranteed through various controlled institutions and various statutory laws. Additionally the constitution of most of the contemporary liberal democracies protects the rights of individuals and minorities, and prohibits the will of majority (majoritarianism), by almost eliminating that rule in practice.

Pros and consSome would argue that liberal democracy isn't democratic or liberal at all. They would argue that "liberal democracy" does not respect majority rule (except when citizens are asked to vote for their representatives), and also that its "liberty" is restricted by the constitution or precedent (in the UK) decided by previous generations. They would argue that, by prohibiting citizens the right to cast votes on all issues (especially for serious subjects like going to war, constitutional amendents or constitution abolishment etc.), this turns "liberal democracy" into the precursor of oligarchy. Others would say that only a liberal democracy can guarantee the individual liberties of its citizens and prevent the development into a dictatorship. Unmoderated majority rule could - in this view - lead to an oppression of minorities.

Open society The concept of an open society is closely related to liberal democracies. Since many liberals see democracies with strong statist reflections through the public choice theory as slow, dogmatic, conservative and not too apt for change, the liberal democracy contrasts with what could be called the "statist" democracy in that it emphasizes the civil society as the engine of its public discourse and development further.
All and all, liberal democrats often simply see the civil society as exactly the best way to satisfy the private, cultural and communitarian preferences of minorities (as well as majorities). Democratically supporting the arts, private communities, sports leagues or other assocations in the civil society is seen by them to

boost the majorities' preferences, either willingly or unwillingly by the policy makers.

Relation to indirect democracyAll liberal democracies are representative democracies. Some of these democracies have additional systems of referenda to give the electorate a possibility to overrule decisions of the elected legislature or even to make decisions by plebiscite without giving the legislature a say in that decision. Switzerland is one of the few liberal democracies with a representative system combined with referenda and plebiscites. Other countries have referenda to a lesser degree in their political system. Adding referenda to a political system could help prevent the evolution of a liberal democracy into an oligarchy.
Australia, Canada, the member states of the European Union, Iceland, New Zealand, Norway and the United States are all examples of somewhat liberal democracies (though of course it is sometimes argued that none is perfect with respect to the above rights).

That's exactly the point "'tard". Both campaigns are out there advertising - trying to get people's attention - in the hope that they can persuade the voters.

Nothing but a radio personality? Really? I'm glad that you noticed that, Professor.

The man has an estimated 10 MILLION listeners and TV watchers on any given morning - waaay more than either campaign can reach in a single rally. I'd say that's clout. I'd say that's serious advertising.

When it goes negative because of a bogus news story about which Kerry is hysterically screaming, that HAS to hurt Kerry!

You need to educate yourself a little more, 'tard. Otherwise, you're always going to be out of touch with reality.

You're welcome.

Unfortunately, the clouds rolled in quickly around 10:40 - so most of totality was obscured. My later shots were taken through my Questar 700 so the public could look through the TMB, and I'm afraid I wasn't able to get critical focus with the Moon so dim.

If anyone is interested, higher resolution copies are available by email if you contact me directly.

Why reduce the AM shortwave broadcast band at all? The AM SW BC bands have
been expanded since the SW commercial utility stations have mostly left.
Just let some of the new expansions go to DRM.

>

Maybe a station is equipped and licensed to operate on a certain frequency,
so that's where they operate, DRM or AM. The real, logical reason might be
that nobody though much about interference until now, and the implementation
is haphazard.

Last night Sean Hannity had a kid on there who was with the 101. He says they found unlocked bunkers full of thousands of hand-grenades and RPGs. He gave the impression they moved on the next day without securing these weapons. This site is 15 minutes from Baghdad.

Incompetence. Then a cover-up. Bush knew on the 10th that this story was going to come out. Rather than face it 2 weeks ago he chose to stick his head under his pillow and hope it would go away.

he is not qualified.

1623. Building a Matching Transformer for Shortwave Listener's Antenna using a Binocular Ferrite Core from a TV type Matching Transformer

Newsgroup: rec.radio.shortwave
Date: 2004-10-28 13:44:07 UTC
From: rhf-newsgroups@pacbell.net

Building a Matching Transformer for Shortwave Listener's Antenna
using a Binocular Ferrite Core from a TV type Matching Transformer.

- - - - - - - R E F E R E N C E - S O U R C E - - - - - - -
From: jpd@space.mit.edu (John Doty)
Newsgroups: rec.radio.shortwave
Subject: Low Noise Antenna Connection
Date: 26 Nov 1993 16:55:24 GMT

"The transformer is built around a toroid extracted from a TV
"matching transformer". If you're a pack rat like me, you have
a few in your basement: you typically get one with every TV or
VCR (or you can buy one). Pop the plastic case off and snip the
wires from the toroid (it looks either like a tiny donut, or a
pair of tiny donuts stuck together). The transformer windings
should be made with thin wire: I use #32 magnet wire.
* The primary is 30 turns while
* The secondary is 10 turns.
For a one-hole toroid, count each passage of the wire down
through the hole as one turn. For a two-holer, each turn is a
passage of the wire down through the right hole and up through
the left.?
- -

MY BINOCULAR FERRITE CORE MATCHING TRANSFORMER PROJECT:

Well I tried two different "Binocular" Ferrite Core to 'build'
a Shortwave Listeners Matching Transformer for a Low Noise Antenna.
I was using #30 Magnet Wire and these Ferrite Cores are very
small 'tiny': 5.0mm H x 6.6mm W x 3.6mm OD x 1.8mm ID

But the maximum number of turns that I could get "In" and "Out"
of the two small holes was 14 Turns.

So I had to settle for a Primary of 9 Turns with a Secondary of 3 Turns.

This would be equal to Primary of 18 Turns and a Secondary of
9 Turns using a standard One-Hole {Donut} Toroid Ferrite Core.

Has anyone built one of these with this few number of turns and:
If So ? How Does It Work ?

* * * * * Binocular Ferrite Core TIPS * * * *
Here are some things to be Mindful of and Consider during the
Matching Transformer Winding Process:

* For these 'tiny' Binocular Ferrite Cores; you will be using the same small size AWG #30 Wire for both Windings. So in your Stationary-End of the Primary Winding "Tie" an Overhand Knot to Identify 'it' after you have completed all your Windings.

* After your first One and a Half Turns (1 1/2T) with the Wire Ends coming out of the Core from Opposite Sides PULL on both Wire Ends to Tighten the Wire Wraps (Loops)

* Each Full Turn after the first 1 ï¿½ Turns: 2 1/2T, 3 1/2T, 4 1/2T, 5 1/2T, 6 1/2T, 7 1/2T, 8 1/2T, 9 1/2T, ETC; with the Wire Ends coming out of the Core from Opposite Sides PULL on both Wire Ends to Tighten the Wire Wraps (Loops)

* Wrap the Primary {Antenna}Turns First and Get-Them-Tight.

* Place a Pencil and paper next to where your are wrapping the Wire through the Binocular Ferrite Core; and Mark Down Each Turn as you wind it. I Prefer to start my 'count' When I start the Return-Pass-Through of the Wire. [Starting from the Bottom the Wire goes Up (Out) through One Hole and then the Wire goes Down (Returns) through The Second Hole.]

* Start the Secondary Turns from the Opposite-End from the Primary Turns. Wrap the Secondary {Coax Cable} Turns and Get-Them-Tight.

* If the Primary and Secondary are going to share a Common Ground then take one Primary Wire End and one Secondary Wire End and Twist them together. [Do Not Use the Primary Wire with the Knot at it's End for one of the Ground Wires.]

You will now have a "T" Shape Matching Transformer Assembly.
At the 'center' of the "T" will be the Binocular Ferrite Core.
The Vertical Leg of the "T' will be the Two Twisted Ground Wires.
The Left-Arm of the "T" will be the Primary {Antenna} Wire with the Knot at the End. The Right-Arm of the "T" will be the Secondary {Coax Cable} Wire.

If you are making several of these TV Binocular Ferrite Core Matching Transformers. Them you may wish to use some Model Paint of Nail Polish to Mark the Leads for easy visual identification of the Leads as you are working with them.
Red - Primary {Antenna} Wire.
Green - Secondary {Coax Cable} Wire
Black - Two Twisted {Ground} Wires

Bush supporters are ''believers''.

Kerry supporters are from the ''reality based community'' and are
skeptics.

Which is more faithful to the spirit of the Founders of the USA?

Is it the duty of the citizen to not trust the government?

The allocated bandwidth of a DRM signal might be the same as a AM signal
but, in the real world, the DRM signal has far more interference potential.
DRM sounds as if it's putting an even amount of power out at all modulation
frequencies. This differs from standard AM which puts out the largest
amount of power at the carrier, and the sideband energy is determined by the
energy of the audio frequencies. The audio frequencies are typically most
powerful at the low frequencies and the power tapers off to a small amount
at the high frequencies. There normally isn't much sideband energy,
proportionally, above 2kHz or so away from the carrier.

Frank Dresser

You're so brainwashed you won't take the time to find them. They have been literally -everywhere- including the last time you lamely tried this same stunt and got a bunch of links that you certainly didn't bother looking at. So why should I bother? This is not a big secret. The film has been debunked over and over and over--except for those uninformed enough not to be paying attention.

Somebody elsewhere in the thread gave you one of the links, but you'll never be able to acknowledge it simply because you are a classic ideologue who cannot handle having your preconceptions hallenged. -That's- f'ing pathetic.

This seems like a good place to insert a discussion about a
"shielded loop" being a myth for anything except for deeper
nulls in the directivity pattern: (these were posted about
18 months ago).

From: Roy Lewallen <w7el@eznec.com>
Date: Fri, 21 Mar 2003 11:30:17 -0800
Newsgroups: sci.electronics.design,alt.engineering.electrical,rec.radio.amateur.antenna
Subject: Re: Loop Antenna questions

It's fairly easy to see that what Tom wrote (the first paragraph of
quoted material below) is true. "Shielding" a loop simply moves the
feedpoint to the gap, and the outside of the "shield" becomes the loop.
It's no more or less immune to electric fields than any other loop. What
"shielding" does (and all it does) is to increase rejection of common
mode excitation, improving loop balance and the resulting pattern null
in practical installations. The sensitivity of a "shielded" loop to both
electric and magnetic fields is exactly the same as for an "unshielded"
loop.

The myth that "shielding" a loop somehow rejects the electric field
without affecting the magnetic field is one that's been kicking around
the amateur community for decades. I don't suppose it'll ever die.

Another thing that seems to be unknown or overlooked is that a small
(so-called "magnetic") loop antenna is actually more sensitive to an
electric field and less sensitive to a magnetic field than a short
("electric") dipole, at all distances from the antenna unless the
radiation source is very close -- within less than a wavelength.

Roy Lewallen, W7EL

From: Roy Lewallen <w7el@eznec.com>
Date: Fri, 21 Mar 2003 22:52:21 -0800
Newsgroups: sci.electronics.design,alt.engineering.electrical,rec.radio.amateur.antenna
Subject: Re: Loop Antenna questions

After some reflection, I see that I can't really justify the statement I
made. Thanks for questioning it.

Let me explain what I do know. The following discussion assumes that all
antennas are lossless, to eliminate a factor that would obscure the
subject under discussion.

If you put 100 watts into a very short dipole, the ratio of the E field
it produces to the H field it produces is called the wave impedance. At
a distance of considerably less than a wavelength, or greater, this
ratio is about 377 ohms (in air or free space), and E and H are in
phase. The same thing is true for a very small loop antenna, or any
other small antenna. If you get far enough away, the E/H ratio is the
same for any kind of antenna, although you might have to get a farther
from an antenna that's large in terms of wavelength. Invoking the
reciprocity principle, you find that the relative response of a small
loop to E and H fields is the same as for a small dipole if the field
originates some distance from the antenna. The so-called "magnetic" loop
responds just the same as any other antenna to fields originating beyond
a wavelength or so from the antenna.

What's interesting is the relative strength of radiated E and H fields
close to the antenna. My overstatement was the implication that the
ratio of E to H transmitted fields represent relative "sensitivity" to E
and H fields when receiving. Contrary to what the CFA and EH proponents
claim, it's not possible to generate E and H fields independently. And
contrary to what people who misunderstand "shielded" loops say, it's not
possible to isolate E and H fields. (It is possible to change the
impedance of a wave -- that is, the E/H ratio -- in a region, but it

always reverts back to the impedance of the medium -- 377 ohms for free space -- within a pretty small distance of the disturbance.) So sensitivity to an E or H field is somewhat problematic, since you can't create either one in isolation for a test. Consequently, I'll just discuss the E and H fields that the antennas produce when transmitting. I believe that an antenna with high transmit E/H ratio will be relatively insensitive to a wave with low E/H ratio (which would have to be created nearby), and vice-versa. But I can't quantify the relationship. I only know it involves the concept of transfer impedance, and I haven't given the topic enough study to say more about it. It is discussed in a number of texts, for those who are interested.

What I've done is look at the E/H ratio radiated by a small loop and a small dipole at various distances, in the direction of the maximum far field radiation (in the plane of the loop and broadside to the dipole).

The following analysis was done with EZNEC/4 using its double precision NEC-4 calculating engine. This was necessary because of problems NEC codes have with very small loops, and the size of loop I chose was too small for analysis with NEC-2. However, it could probably be done with MININEC, or it could be done with an NEC-2 based program like the EZNEC demo if the loop is made a bit larger. It's vital to set the loss to zero so that a negative feed point impedance isn't concealed by positive loss resistance. I've gotten email from a person who was skeptical of the results and did the calculations analytically. He came to the same conclusion, which gives me added confidence in the results. The following calculations were done at 3 MHz (100 meter wavelength).

Here's what happens. A small loop is sometimes called a "low impedance" antenna because of the low E/H ratio close to the antenna. This might be adequate justification for calling it a "magnetic" antenna as amateurs have taken to doing, but the term unfortunately conveys the mistaken impression that the antenna somehow responds only to or more strongly to magnetic fields coming far from the antenna, which isn't true. But very close to the antenna, the E/H ratio is indeed lower than the 377 ohm value this ratio always has far from the antenna. In exactly complementary fashion, a small dipole is a "high impedance" antenna, having an E/H ratio higher than 377 ohms very close to the antenna. Here are the values of the magnitude of E/H for a 2 meter (1/50 wavelength) circumference octagonal loop and a 2 meter long dipole at 3 MHz. The distance is measured from the center of the loop or dipole, and the direction is in the plane of the loop or broadside to the dipole.

Distance (m) E/H (ohms)
Dipole Loop
2 2630 63.9
4 1360 110
6 862 169
8 597 241
10 440 326
12 345 414

14 291 490
16 265 538
18 257 555
20 258 552
22 264 538
24 273 522
26 281 506
28 290 491
30 297 478
50 342 415
100 367 386

The curious thing is that, while the dipole field impedance is high close to the dipole, and low close to the loop, in both cases it overshoots 377 ohms by a considerable amount, reaching a peak (lowest Z for the dipole and highest for the loop) at about 18 meters, then asymptotically approaches 377 ohms from the "wrong side" beyond that. At all distances of 12 meters (about 1/8 wavelength) and beyond, the E/H ratio of the loop is actually higher than that of the dipole! That was the basis for my original statement. Whatever might be said about the "sensitivity" of a "magnetic" loop to E and H fields, it certainly can't be said to be more sensitive to H fields, or less sensitive to E fields, than a small dipole, at any distance greater than about 1/8 wavelength.

The exact sizes of the loop and dipole aren't important. The near fields at these distances are essentially equal for all small dipoles and for all small loops for a given input power, provided that they're much smaller than a wavelength in any dimension.

> another figment of wish fulfillment).

My understanding of the CFA/EH antenna is undeniably vague, but I think it goes something like this: The E and H fields are created independently, one by a capacitor-like part of the antenna and the other by a coil-like part of the antenna. This, as I said and as many others have pointed out, can't be done. Creation of a time-varying E field always results in a time-varying H field, and vice-versa. The E and H fields thus "independently" created are done so in the ratio of 377 ohms. This being the ratio of the the components in the far field, the direct synthesis results in the lack of a near field. This lack of near field is credited somehow with the magical properties of these antennas (high efficiency despite small size) by mechanisms that have never been clear to me. At any rate, these wonderful properties have never been demonstrated with either believable measurements or modeling despite more than a decade of hype, so it sure looks like they're fiction also. The EH antenna further distinguishes itself by requiring a magic inductor whose current at one terminal is shifted in phase 90 degrees from the current at the other terminal, adding yet another layer of impossibility.

If I've misinterpreted the explanations for how these things are supposed to work, I apologize -- it wasn't intentional.

> The argument about being less sensitive to neighborhood noise for

> antenna in a noisy neighborhood and makes that case in some sense.

It might. Remember, though, that this is constant in terms of wavelength, so the range drops by a factor of two at twice the frequency. (But on the other hand, the range will be greater at 160 meters.) Also, note that the difference isn't very great even at a distance of 10 meters. You have to get very close indeed to see a truly major difference. I suspect that major differences in interference rejection are as likely to be due to differences in balance (causing better or worse nulls) or polarization.

> It seems to me that the difference applies only to situations where
> that first 10M is significant, and to what degree coupling of
> interference within that region becomes meaningful.

Yes, that's the conclusion I reach.

| You can't list 3 factual errors. That's fucking pathetic.

Here are three, punk. Why don't you suck on them, then come back for more?

One:

Moore creates the false impression that the networks withdrew their claim about Gore winning Florida when they heard that Fox said that Bush won Florida.

In fact, the networks which called Florida for Gore did so early in the evening-before polls had even closed in the Florida panhandle, which is part of the Central Time Zone. NBC called Florida for Gore at 7:49:40 p.m., Eastern Time. This was 10 minutes before polls closed in the Florida panhandle. Thirty seconds later, CBS called Florida for Gore. And at 7:52 p.m., Fox called Florida for Gore. Moore never lets the audience know that Fox was among the networks which made the error of calling Florida for Gore prematurely. Then at 8:02 p.m., ABC called Florida for Gore. Only ABC had waited until the Florida polls were closed.

Two:

How did Bush win Florida? "Second, make sure the chairman of your campaign is also the vote count woman." Actually Florida Secretary of State Katherine Harris (who was Bush's Florida co-chair, not "the chairman") was not the "vote count woman." Vote counting in Florida is performed by the election commissioners in each of Florida's counties. The Florida Secretary of State merely certifies the reported vote. The office does not count votes.

Three:

Moore shows scenes of Baghdad before the invasion (read: liberation) and in his weltanschauung, it's a place filled with nothing but happy, smiling, giggly, overjoyed Baghdadis. No pain and suffering there. No rape, murder, gassing, imprisoning, silencing of the citizens in these scenes. When he exploits and lingers on the tears of a mother who lost her soldier-son in Iraq, and she wails, "Why did you have to take him?" Moore does not cut to images of the murderers/terrorists (pardon me, "insurgents") in Iraq.or even to God; he cuts to George Bush. When the soldier's father says the young man died and "for what?", Moore doesn't show liberated Iraqis to reply, he cuts instead to an image of Halliburton.

Jeff Jarvis, "Watching Michael Moore," Buzz Machine weblog, June 24, 2004.

The most offensive sequence in "Fahrenheit 9/11"'s long two hours lasts only a few minutes. It's Moore's file-footage depiction of happy Iraq before the Americans began their supposedly pointless invasion. You see men sitting in cafes, kids flying kites, women shopping. Cut to bombs exploding at night.

What Moore presumably doesn't know, or simply doesn't care about, is that the building you see being blown up is the Iraqi Ministry of Defense in Baghdad. Not many children flew kites there. It was in a part of the city that ordinary Iraqis weren't allowed to visit-on pain of death.

.Iraq was ruled by a regime that had forced a sixth of its population into fearful exile, that hanged dissidents (real dissidents, not people like Susan Sontag and Tim Robbins) from meathooks and tortured them with blowtorches, and filled thousands of mass graves with the bodies of its massacred citizens.

Yes, children played, women shopped and men sat in cafes while that stuff went on-just as people did all those normal things in Somoza's Nicaragua, Duvalier's Haiti and for that matter Nazi Germany, and as they do just about everywhere, including in Iraq today.

Foreman, New York Post. For more, see the weblog of Iraqi Sarmad Zanga (part of which cites this report).

Fahrenheit points out, correctly, that the Saudi monarchy is "a regime that Amnesty International condemns as a widespread human rights violator." Fahrenheit does not mention that the Saddam regime was likewise condemned by Amnesty International. As AI's 2002 annual report noted, in April 2002 "the UN Commission on Human Rights adopted a resolution strongly condemning 'the systematic, widespread and extremely grave violations of human rights and of international humanitarian law by the Government of Iraq, resulting in an all-pervasive repression and oppression sustained by broad-based discrimination and widespread terror.'''

[Moore response: None.]

| Check out the 303 and 313 series radios. You need a notch filter.

Don't you have some vomit to choke on, Willie?

ME,

Follow-Up Questions:

If it only has 'one' IF Filter is used for the AM, AM-SYNC and
SSB Modes of Reception ?

How does the Sony ICF-SW7600GR manage to 'create' the different
Band Widths for these three Modes of Reception ?

Reference: Sony ICF-SW7600GR Service Manual (PDF File)
http://www.rigpix.com/sony/sony_icfsw7600gr_service.pdf

Any Help or Information would be Appreciated

tia & tyvm ~ RHF

Has anyone ever used one of the magnetic loop antennas sold by Waters and Stanton?

http://www.wsplc.com/acatalog/Magnetic_loop_antennas.html

Get a load of the prices on these things! I'm not in the market for one, but I'm curious about whether anyone can comment on the performance of these antennas.

Steve

We can agree on this. I setup my DX392 in deer camp last weekend and hooked it to a 70' random wire and still didnt get much other than the usuall suspects. Gonna try the DX402 insted this weekend. So, whats a good tabletop thats semi-portable? I have a DX394 at home and was going to use that once I upgrade the home reciever.

Thanks.

Here's a shot of M57 I did a couple months back:

<http://users.adelphia.net/~msholden/m57.jpg>

The main problem I have with shots like this is light pollution. If I go long enough to make the central star easy to see, the background starts to wash out.

But taking these photos while listening to my "portable" 7030+ is fun.

Also, for those interested in tuning in Jupiter on their shortwave radios, here's a link with information. I suspect most of us have better radios than the kit they offer:

<http://radiojove.gsfc.nasa.gov/>

Regards,

Mark

I do too, and, with your usual insight and intelligence, you've cut
right to the heart of the issue. For the average person seduced by
propaganda, ideas and substance do not matter, images matter.
Goebbels and Leni Riefenstahl were propagandists of the first order,
so they knew this. Moore is a propagandist of the first order, so he
knows this. If you have access to unlimited amounts of footage of a
person in the public eye that you can spin anyway you want, you can
paint a picture and make people forget to think about substance.
They'll say "just watch...."

True, shortwave broadcasters could charge a fee for digital shortwave signals. Given that they have established competition in the form of subscription satellite radio, free FM and free AM broadcasts and internet radio I think they will find the market share small. The shortwave broadcasters face the challenge of convincing their listeners that spending good money on a special purpose radio and a monthly fee will provide a big improvement in radio programming. It will be a very steep hill to climb.

I could see digital broadcasts to local stations which then rebroadcast in either standard MW or FM.

Warren Co., NC has a machine with a column of buttons down each side.
The screen will have a block for write in. Press the key beside it and
a screen similar to what he mentioned pops up. Just type in the name
you want.

There will be a way - either a touch screen or a button to select the
"write in" blank box. ... possible other ways.

Instructions are with most machines, but I'm not sure if they are in
Spanish, French, German, Chinese, Russian and Arabic. :-) I guess we
have grounds for contesting the election. They didn't have instructions
in the language of some illegal alien's native language. What is
America coming to? ... or going to?

This brings a question to my mind - if one hears and QSLs a relay of,
say, VOA from a place like, say, Thailand or Botswana, does that
"officially" count as a country heard and QSLed, or is it just another
QSL from VOA? If you hear China Radio International only on its Cuban
relay, have you heard China or Cuba? In many cases, like VOA in
Botswana, RNW in Madagascar or a pile of others like BBC or France,
the relays are the strongest and easiest signals to catch, and
frequently the only ones in a language that we provincial Yanks can
understand...

I realize that there may be varying opinions on this one, but I would
weigh the opinions of experienced DXers with some additional
gravity...

I haven't gotten a QSL since, and I'm thinkingit might be fun to start
a new album :-).

Thanks,
Bruce Jensen

Blame Canada
(From South Park: Bigger Longer & Uncut)

Times have changed,
Our kids are getting worse
They won't obey their parents,
They just want to fart and curse. Should we blame
the government, or blame society, or should we
blame the images on tv No!
Blame Canada! Blame Canada

With all their beady little eyes,
their flapping heads so full of lies
Blame Canada!
Blame Canada!
We need to form a full assault, it's Canada's fault!
Don't blame me, for my son Stan, He saw the darn
cartoon, and now he's off to
join the klan! And my boy eric once, had my picture
on his shelf, but now when I see him, he tells me to
fuck myself

Well, Blame Canada!

It seems that everything's gone wrong since
Canada came along
Blame Canada!
Blame Canada! They're not even a real country anyway.
My son could of been a doctor or a lawyer, it's a true,
Instead he burned up like a piggie on a barbecue.
Should we blame the matches? Should we blame the fire,
or the doctor who allowed him to expire. Heck no!
Blame Canada!
Blame Canada!
With all their hockey hubaloo and that bitch Anne
Murray too. Blame Canada!
Shame on Canada!

The smut we must stop
The trash we must smash
Laughter and fun
must all be undone
We must blame them and cause a fuss
Before somebody thinks of blaming us!

-BC

R. Victoria, Lima, Peru - suspected

Early this morning, 10/28/04 0445 to after 0500 UTC, I listened to a station on 6020.24, in Spanish, with what sounded like a dynamic revival speech by a high-powered preacher. This went on until 0457, then gentler announcements over soft cheerfully reverent background music, followed by a return to the dynamic speaking mode at 0500.

I have QRM coming and going, and right about the time when an ID would have been expected the noise level shot up and drowned the station before I could subdue the noise; but the QRM subsided and the signal became clear again.

Overall, SINPO = 22232, only significant interference was bleedover from bubble jammer on Radio Marti 10 kHz away, signal varied from S2 to as high as S8. If this is R. Victoria, and they are operating 5 kW as stated, then it is certainly the best signal I have ever received from a Peruvian station, and the best signal from a 5 kW station over that distance. As this frequency is typically clear at this time, I will try this again tonight.

Bruce Jensen, SF Bay Area, California, US,

Yeah, we care what Imus, the has been has to say. I'm glad you look up to
him. But wait, you look up to a ex drunk Cocaine abuser who is brain dead
without a script to read from in front off him. Kerry gives full speeches at
rallies without a piece of paper.

Are you a redneck hick by any chance or just plain dumb born and raised?

Tell me when we find the weapons of MASS DESTRUCTED that we invaded Iraq for
and over 1000 young boys and innocent Iraqi citizens were killed for
NOTHING.

But wait, not for nothing. bush and his cronies
get kickbacks from the billions we are spending on the war machine. That's
after the looted the taxpayers for over 8 TRILLION AND left ourt kids a
massive deficit.

Ask senior citizens how they feel about the 17% increase in Medicare while
the top 2% of the richest people in the country get back 87 BILLION in tax
cuts. That's 87 billion that could have been used to help the deficit, not
having a 17% increase on Medicare for ederly people or better Home land
security.

How about Hallibuton over charging and robbing the tax payers? Do you know
cheney the pig still gets paychecks from them?

Only dumb redneck religious nuts with no education like bush and you fit right in with them.

Kerry will win the election by a nice margin. Then you tobacco chewers can "shoot the bull and have a Bud" by yourselves...

1684. OT Discrepancy Found in Explosives Amounts

Newsgroup: rec.radio.shortwave
Date: 2004-10-28 16:52:58 UTC
From: MnMikew <mnmiikkew@aol.com>
Message-ID: <2ucmfbF28i6svU1@uni-berlin.de>
Source record: 1684

Oct. 27, 2004 - Iraqi officials may be overstating the amount of explosives reported to have disappeared from a weapons depot, documents obtained by ABC News show.

The Iraqi interim government has told the United States and international weapons inspectors that 377 tons of conventional explosives are missing from the Al-Qaqaa installation, which was supposed to be under U.S. military control.

But International Atomic Energy Agency documents obtained by ABC News and first reported on "World News Tonight with Peter Jennings" indicate the amount of missing explosives may be substantially less than the Iraqis reported.

The information on which the Iraqi Science Ministry based an Oct. 10 memo in which it reported that 377 tons of RDX explosives were missing - presumably stolen due to a lack of security - was based on "declaration" from July 15, 2002. At that time, the Iraqis said there were 141 tons of RDX explosives at the facility.

But the confidential IAEA documents obtained by ABC News show that on Jan. 14, 2003, the agency's inspectors recorded that just over three tons of RDX were stored at the facility - a considerable discrepancy from what the Iraqis reported.

The IAEA documents could mean that 138 tons of explosives were removed from the facility long before the United States launched "Operation Iraqi Freedom" in March 2003.

The missing explosives have become an issue in the presidential campaign. Sen. John Kerry has pointed to the disappearance as evidence of the Bush administration's poor handling of the war. The Bush camp has responded that more than a thousand times that amount of explosives or munitions have been recovered or destroyed in Iraq.

Another Concern

The IAEA documents from January 2003 found no discrepancy in the amount of the more dangerous HMX explosives thought to be stored at Al-Qaqaa, but they do raise another disturbing possibility.

The documents show IAEA inspectors looked at nine bunkers containing more than 194 tons of HMX at the facility. Although these bunkers were still under IAEA seal, the inspectors said the seals may be potentially ineffective because they had ventilation slats on the sides. These slats could be easily removed to remove the materials inside the bunkers without breaking the seals, the inspectors noted.

I'll take your word for it, but when I learned the term it only seemed
to mean a radio with a tuned RF stage, implying nothing more about the
radio. Kinda had the sense of "air-conditioned car".

You do realize that corporations don't pay taxes, they only collect
them from their customers, right? All a corporate tax is is a price
hike in the corporation's products or services.

You do realize that corporations that pay less taxes have more money
left over to hire employees, right? Jobs are only created when companies
have money to hire employees.

You do realize that this bill also closes lots of loopholes and tax
shelters, which should make the $136 billion cut return $82 billion,
right?

You do realize that $10 billion of this money is earmarked for buying
out tobacco farmers, right? That makes it $126B in cuts and $10B
for the anti-smoking jihad.

Other than the office of President and VP, I'm not even sure there's
any requirement for election at all. I don't know of any Federal law that
prevents a state from choosing its senators and congressmen by lottery
or by giving the offices to the highest bidder.

I've heard it said that WLS has serious grounding problems at their
antenna, and has been too cheap to repair them. That would explain
a lot.

By contrast, both at my old home and my new one WBBM can put THREE VOLTS
peak-to-peak into a loopstick antenna. WGN is over 2-1/2 VOLTS. Both
places are over ten miles from the respective antennas (which aren't
far from each other IIRC).

There was plenty of objection there. I'm calling you out on your
small member. You need to answer for it. It's people with small
peckers that cause a lot of the heartache and lost explosives in the
world. Barbara Streisand told me that at the last democratic party
rally... ah - but that's a completely different story.

FAHRENHEIT 9/11: Fox was the first network to call Florida for Bush. Before that, some other networks had called Florida for Gore, and they changed after Fox called it for Bush.

ï¿½With information provided from the Voter News Service, NBC was the first network to project Gore the winner in Florida at 7:48 pm. At 7:50 pm ,CNN and CBS project Gore the winner in Florida as well.ï¿½ By 8:02 pm , all five networks and the Associated Press had called Gore the winner in Florida. Even the VNS called Gore the winner at 7:52 pm. At 2:16 am, Fox calls Florida for Bush, NBC follows at 2:16 am. ABC is the last network to call the Florida for Bush, at 2:20 am, while AP and VNS never call Florida for Bush. CNN:
http://www.cnn.com/2001/ALLPOLITICS/stories/02/02/
cnn.report/cnn.pdf
Ten minutes after the top of the hour, network excitement was again beginning to build. At 2:16 a.m., the call was made: Fox News Channel, with Bush's first cousin John Ellis running its election desk, was the first to project Florida -- and the presidency -- for the Texas governor. Within minutes, the other networks followed suit. "George Bush, Governor of Texas will become the 43rd President of the United States," CNN's Bernard Shaw announced atop a graphic montage of a smiling Bush. "At 18 minutes past two o'clock Eastern time, CNN declares that George Walker Bush has won Florida's 25 electoral votes and this should put him over the top."PBS:
http://www.pbs.org/newshour/media/election2000/
election_night.html
FAHRENHEIT 9/11: The man who was in charge of the decision desk at FOX on election night was Bushï¿½s first cousin, John Ellis.

ï¿½John Ellis, a first cousin of George W. Bush, ran the network's ï¿½decision deskï¿½ during the 2000 election, and Fox was the first to name Bush the winner. Earlier, Ellis had made six phone calls to Cousin Bush during the vote-counting.ï¿½ William Oï¿½Rourke, ï¿½Talk Radio Key to GOP Victory,ï¿½ Chicago Sun-Times, December 3, 2002.
A Fox News consultant, John Ellis, who made judgments about presidential ï¿½callsï¿½ on Election Night admits he was in touch with George W. Bush and FL Gov. Jeb Bush by telephone several times during the night, but denies breaking any rules. CNN, November 14, 2000;
http://www.cbsnews.com/stories/2000/
11/14/politics/main249357.shtml.
John Ellis, the Fox consultant who called Florida early for George Bush, had to stop writing about the campaign for the Boston Globe because of family ï¿½loyaltyï¿½ to Bush. CBS News,
http://www.cbsnews.com/stories/2000/
11/14/politics/main249357.shtml, November 14, 2000.

FAHRENHEIT 9/11: ï¿½Make sure the chairman of your campaign is also the vote continï¿½ woman and that her state has hired a company thatï¿½s gonna knock voters off the rolls who arenï¿½t likely to vote for you. You can usually tell them by the color of their skin.ï¿½

ï¿½The vote total was certified by Florida's secretary of state, Katherine Harris, head of the Bush campaign in Florida, on behalf of Gov. Jeb Bush, the candidate's brother.ï¿½ Mark Zoller Seitz, ï¿½Bush Team Conveyed an Air of Legitimacy,ï¿½ San Diego Union-Tribune, December 16, 2000.
The Florida Department of State awarded a $4 million contract to the Boca Raton-based Database Technologies Inc. (subsidiary of ChoicePoint). They were tasked with finding improperly registered voters in the stateï¿½s database, but mistakes were rampant. ï¿½At one point, the list included as felons 8,000 former Texas residents who had been convicted of misdemeanors.ï¿½ St. Petersburg Times (Florida), December 21, 2003.
Database Technologies, a subsidiary of ChoicePoint, ï¿½was responsible for bungling an overhaul of Floridaï¿½s voter registration records, with the result that thousands of people, disproportionately black, were disenfranchised in the 2000 election. Had they been able to vote, they might have swung the state, and thus the presidency, for Al Gore, who lost in Florida. Oliver Burkeman, Jo Tuckman, ï¿½Firm in Florida Election Fiasco Earns Millions from Files on Foreigners,ï¿½ The Guardian, May 5, 2003
http://www.guardian.co.uk/usa/story/0,12271,949709,00.html. See also, Atlanta-Journal-Constitution, May 28, 2001.
In 1997, Rick Rozar, the late head of the company bought by ChoicePoint, donated $100,000 to the Republican National Committee. Melanie Eversley, ï¿½Atlanta-Based Company Says Errors in Felon Purge Not Its Fault,ï¿½ Atlanta Journal-Constitution, May 28, 2001. Frank Borman of Database Technologies Inc. has donated extensively to New Mexico Republicans, as well as to the Presidential campaign of George W. Bush. Opensecrets.org, ï¿½Frank Borman.ï¿½

It doesn't matter if they are the ''same''. They are dangerous items
20 miles from Baghdad, easily used by the insurgency, and they were
unguarded. And Bush was moving the Army so quickly they left lots of
these sites unguarded and these materials are now being used against
us.

Incompetence.

1709. Fittingly, Kerry Campaign Ending on a Big Lie - And It Will Be His Downfall

Newsgroup: rec.radio.shortwave
Date: 2004-10-28 17:47:25 UTC
From: Gactimus <gactimus@xrs.net>
Message-ID: <Xns95908C463F464UB@alaska.local>
Source record: 1708
Cross-posted to: alt.politics.usa.republican,alt.spacebastards,alt.abortion,alt.politics.democrats.d,comp.sys.mac.advocacy,alt.fan.rush-limbaugh,alt.politics.homosexuality,rec.radio.shortwave

How fitting is it that the Kerry campaign is going to crash and burn in this last week because they made a huge deal out of an outright lie by the New York Times and CBS in an effort to defeat the President? Really, it just couldn't have happened any other way. There's an old saying about stuff like this. We're not sure if it's Buddhist, Confucianism or what, and it goes something like this - "Karma's a Bitch".

For the last 2 years or so the left wing America-haters have been spouting lie after ridiculous lie about George Bush. You could say these were the founders of the movement. You know who they are - the Moveon.org crowd, Michael Moore, Al Franken, the list goes on and on. Originally the claims were about things like phantom voter disenfranchisement in Florida during the 2000 election, and that the President let Osama Bin Laden's family leave the country right after September 11 when American flights were grounded.

However, with the sudden and unexpected rise of Howard Dean, we actually found out what we thought was the lunatic fringe was actually the mainstream of the Democratic party. Thus, in order to secure the nomination John Kerry had to join them. That was his first mistake - largely because he was already there, but next to Howlin' Howie he seemed like a fascist.

Thus, Kerry took on the persona and causes of the lying left and made it his campaign platform. However, like the gambler who can't walk away, Kerry spouted one lie too many, and because of it he'll forever be a Senator from Massachusetts.

You can tell just how desperate Kerry has become in the last week or two by the sheer audacity of his lies. Recently he's been scaring people into thinking that the draft is coming back, made unsupported allegations that Bush has a "January Surprise" to reduce social security, charged Bush with having a "secret plan" to raise milk prices in Wisconsin, and claimed that Bush paid more attention to tax cuts for the rich than he did Osama Bin Laden. The list goes on and on.

But Kerry should have quit while he was ahead (or to be more accurate, almost tied). He showed his desperation and willingness to say anything by grabbing onto the "NYTrogate" story way too quickly, even putting out a TV ad in less than a day. By locking himself in that the phantom "disappearance" was the result of Bush's incompetence, he sealed his fate.

In less than 48 hours the story is coming apart faster than a virgin's gown on prom night. You can tell just how bad it is when the publisher of the lie, in this case The New York Times, is retreating quicker than a French

soldier.

Let's examine their latest attempt to keep the story going. In the interview three unnamed Iraqi's and a worker at the munitions plant to try to show how bad the looting was.

The score in these big heists? What's mentioned in the article is computers, "anything of value" in the office, and things that "looked like artillery". Further, the article mentions "grabbing anything they can find" and tossing unwanted items off of trucks. Hey, it's not 385 tons of dangerous explosives, but it's close enough for an attempted "October Surprise" at the Times.

We're sorry, we shouldn't make fun. We can easily see how a stapler and computers could be mistaken for 385 tons of explosive material. ABC News is now reporting there may have been only 3 tons of explosives at the plant; less than 1% of the original reported total of 385 tons. Hell, the same story was forced to quote the American Commander on the ground to say what is just common sense to us normal folk - that it would have been near impossible to move nearly 400 TONS of explosives on roads being heavily traveled on a daily basis by US armed forces. I mean, it's not as if they were stealing hard to see things.

As the day wore on the story got even flimsier. This report quoting John Shaw, deputy undersecretary of Defense says that the Russians took those explosives to Syria in March, 2003, a month prior to American troops arriving. I guess this showed "incredible incompetence" right Senator Kerry. I mean, how dare he not secure weapons in a place where there were no American troops? Perhaps Senator, the blame for this lies with you and your ilk for insisting for months that we fart around with the corrupt French, Germans and other feckless UN Nations. Senator, will you apologize for this error? Didn't think so.

Next came a report that in February, 2003, two months before the invasion, that Mohammed El Baradai of the UN Atomic Energy Commission told the UN that Iraq reported the explosives had been transferred for use in quarries" Hmm, doesn't that make it kind of hard to guard stuff at Al-Qaqaa when it's really in a quarry (or in Syria)? But I'm sure the Senator will run a commercial blaming the President for failing to secure Iraqi quarries.

Hell, even Kerry's own spokespeople admitted they didn't know if the weapons were there when American forces arrived. Richard Holbrooke said on Fox News that: "I don't know what happened" [with regard to when the explosives were removed] and later on, this bombshell from Mike McCurry: "..there is a window that's available there where either just prior to or just after the invasion, there could have been an opportunity for either Saddam to move the weapons or for something happening after that facility had been abandoned."

Read the quote from McCurry again. They admit the explosives could have been removed by Saddam before the invasion, yet they continue to act as if

the President did nothing after the invasion to stop the weapons from being stolen. Only in Kerryland is such logic accepted.

Still, we think the best retort to Senator Kerry was from the President himself in Lancaster today when he said: "Now, the senator is making wild charges about missing explosives. One of his top foreign policy advisors admits he doesn't know the facts. He said, 'I don't know the truth.' End quote. Well, think about that. The senator is denigrating the actions of our troops and commanders in the field without knowing the facts....and a political candidate who jumps to conclusions without knowing the facts is not a person you want as your commander in chief." Amen Mr. President.

Thus, a campaign that was built on the lie that the President "lied" about WMD's, that he "rushed to war", and numerous other outrageous lies will have been brought down by the truth. Kerry had a window in these last week to take his best shot and it wasn't (and really still isn't) out of the question he could have pulled it off.

However, a leopard can't change it's spots, and he had to pile on just one more idiotic, outrageous lie, with of course the help of the national press. But we think that when he's alone in one of John Heinz's homes in a few months wondering what might have been, he's going to look back on this last week's events and want to jump off a bridge. But he won't. He'll just get in the 40 foot yacht, on the private jet, or on the $8,000 exercise bike to try to run away from his frustrations. But he won't be able to. He's going to spend the next 30 years of his life regretting he couldn't stop lying for 1 week.

Incompetence. Hmmmmmm... I think incompetence was the fact that your daddy didn't wear a condom, and your momma didn't use birth control.

How's that for incompetence?

I'm sure the brother and sister team are proud of their 'tard boy though.

rofl Sorry, kid.

http://www.globalsecurity.org/org/news/2003/030405-chem-readiness01.htm

The Record (Canada) April 05, 2003
U.S. troops find signs of chemical readiness

In-Depth Coverage

SOURCE: Associated Press

As the military advances closer to Baghdad, signs of Iraqi chemical preparedness are multiplying, although there is still no conclusive evidence Saddam Hussein possesses any weapons of mass destruction.

Yesterday, troops at a training facility in the western Iraqi desert came across a bottle labelled "tabun," a nerve gas and chemical weapon Iraq is banned from possessing.

Closer to Baghdad, troops at Iraq's largest military industrial complex found nerve agent antidotes, documents describing chemical warfare and a white powder that appeared to be used for explosives.

UN weapons inspectors went repeatedly to the vast al Qa Qaa complex, most recently on March 8. But they found nothing during spot visits to some of the 1,100 buildings at the site 40 kilometres south of Baghdad.

Col. John Peabody, engineer brigade commander of the 3rd Infantry Division, said troops found thousands of five-centimetre by 12-centimetre boxes, each containing three vials of white powder, together with documents written in Arabic that dealt with how to engage in chemical warfare.

A senior U.S. official familiar with initial testing said the powder was believed to be explosives. The finding would be consistent with the plant's stated production capabilities in the field of basic raw materials for explosives and propellants.

According to UN weapons inspectors, who spoke on condition of anonymity, the Iraqis filled warheads and artillery shells with explosives at the site and manufactured bomb casings there. The activities, for conventional weaponry, were allowed under UN resolutions. But the resolutions, passed after the 1991 Gulf War, ban Iraq from possessing chemical, biological and nuclear weapons and the long-range missiles to deliver them...

It's commonly not understood by non-engineers that a radio station (broadcasting or otherwise) causes interference over a much wider area than it provides service. This is especially true on AM where multiple signals on the same frequency mix together.

The new Chicago X-band station moved from downstate - Johnson City IIRC. A station on that frequency in Chicago would not have been allowed if WRLL had been operating downstate.

As for the seemingly-open FM frequency, that depends on the quality of one's receiver. I can ensure you my car radio (1998 Ford Escort) finds NO open FM channels anywhere along the Edens/Kennedy/Ryan/Skyway corridor. (and I'd be amazed if it found one open anywhere else in the Chicago city limits) The frequencies either side of WUSN (99.3, 99.7) *sound* open but that's because WUSN is running IBOC!

On the other hand, one could take that to extremes... my home receiver provides useful reception of several Memphis stations, 170 miles away. Should we prohibit any Nashville station from operating on a Memphis frequency?

The new LPTVs have (probably, I don't know the specific channels) become possible as a result of the FCC relaxing certain "taboo channel" regulations. They acknowledge a major improvement in the selectivity of UHF TV tuners since 1952. Many FM receivers haven't improved significantly in selectivity since the 1950s.

> Right. And viewers/listeners don't really make the distinction between
> cable and satellite and broadcasting anymore. If 90% of a person's TV
> channels are uneffected by the fairness doctrine, does the fairness doctrine
> have any effect on the viewer?

Y'know, this is a dilemna in light of the Commission's new decency push.

How does OTA broadcasting compete with TBS, HBO, XM, or Sirius? When the former industry is restricted by decency rules, while the latter isn't?

How does enforcing decency rules against OTA stations accomplish anything when most homes have content-unregulated premium channels?

When a growing number of cars have content-unregulated XM receivers? So little Johnny doesn't learn what a breast looks like from Janet Jackson on CBS. He'll figure it out the next night when he tunes past Showtime during a program that shows a whole lot more than Jackson did...

Cable TV channels use radio transmission (via satellite) to link their programming to your local cable system. XM and Sirius use radio transmission (again via satellite, and now also terrestrially) to deliver their programs to your radio.

IMHO the FCC has grounds to regulate both services on content if they chose to do so. IMHO they need to either do so, or lift content regulations on OTA.

Yeah, but isn't that largely a matter of definition and policy? As I understand, the FCC used to try to keep a 30 kHz spacing between stations in the same market, now they'll go for 20 kHz. In my opinion, there are already too damn many stations on the air, using my personal standard of maximum allowable interference. But if the FCC doesn't much care about more interference, they could pack more stations in.

Even if a broadcaster refuses to broadcast an opposing view on his station or stations, he is only restricting one outlet for the opposing speech. So what? The Soviet Union had an entirely controlled media. Every paper, every broadcaster was owned by one monopoly. Yet some version of the truth got around. Printed material from typewriters and photocopiers were handed around. Phone calls were made. The Soviet media lies increased cynicism, not indoctrination. Control of one station or one broadcast network would be even less persuasive, especially if other outlets for opposing viewpoints are available.

> so.

If people don't like what they hear on a broadcast, getting rid if it is even easier than canceling. They just tune out.

I'm not sure I catch the reason why the fairness doctrine is necessary with broadcast stations but not necessary with pay services. I don't think it has to be a jurisdictional thing, as some Congressmen have proposed extending decency standards to pay services and the internet.

Anyway, I can't think of any reason a satellite direct broadcast service must be a subscription service. If satellite technology gets cheap enough, the networks might well launch their own, advertiser supported satellites. It's also easy enough to imagine the satellite receivers would be easily affordable.

With cable systems, there's no practical distinction between cable channels and broadcast channels.

> all those people. Whether they like it or not.

They do serve people, by entertaining them. That's what broadcasting is good at. Broadcasting is a poor educational media. People who want to actually learn something read about it. Or converse with someone knowledgeable. Or, best yet, do it. I suppose broadcasting could be whipped into a decent educational media with VCRs and tape recorders so people could go back and forth until they actually understand what's being discussed, but they hardly ever do. Broadcast information goes into the air for an ephemeral moment, and then it's gone. Guys like Limbaugh and Hannity are successful, not because they are informative, but because they're entertaining.

I suppose there are a few doofuses who think they are getting some sort of political education from the broadcast loudmouths who are putting on a show within the limitations of broadcast media.

I do live in a dense urban area, so some of the interference I'm
getting may be from various household appliances. It's very
intermittent.

And all the power lines in my immediate neighborhood are above ground,
including a power pole and lines about 30 feet from my back door.

But I'll stop worrying about BPL.

Thanks,

As if any of this has anything to do with Bush. Everyone with any military knowledge knows that the military officers are the ones making the calls in that situation. I can't understand how some people can actually believe that the President is an actual "Military Planner". If you want to blame someone, blame the leaders in the military.

The opposition really needs to get its story straight.

No, they don't. And that's the problem. Liberals will KNOWINGLY ignore facts that disprove their beliefs. They will willingly believe any and all statements that glorify their heroes or denigrate the other side, no matter how wildly inaccurate the statements may be.

This is true for some Bush supporters as well. Everybody thinks that they are right and no one wants to back down. It's ridiculous. These politicians have you all so riled up that you can't see the forest for the trees.

SANDMAN,

STORY # 1.

I Did Run the Boston Marathon and Finished It !

Never saw John 'ff' Kerry at the Start.

Stopped at the Top of Heart Break Hill and turned around
and Looked Back and John 'ff' Kerry 'Was Not There' [.]

Never saw John 'ff' Kerry at the End.

But throughout the Whole Boston Marathon Race I did Hear
flip-flop, Flip-Flop. FLIP-FLOP !

* *

STORY # 2.

The first day on the Job as an Inspector I was told to:

* Get the Facts.

* Write Them Down.

* Then Open Your Mouth.

It is Clearly Evident that the John 'ff' Kerry Campaign went around
Shooting Off their Mouths; before they 'got the facts'. And then
they are blaming the Campaign of Geroge "W" Bush for their failures.

Looks Like More Typical "Kerry-O-Ke" Thinking :o) ~ RHF

* *

John 'ff' Kerry may be 'the great debator'.

But, John 'ff' Kerry is NOT Presidential Material [.]

So Say I - My Opinions Stated As Facts ~ RHF

1738. The BBC Far Eastern Relay

Newsgroup: rec.radio.shortwave
Date: 2004-10-28 19:59:32 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <clrj33$b7m$1@hercules.btinternet.com>
Source record: 1736

By RichardG3VGW

When I joined the BBC in 1962 at Daventry there were just the two overseas relay stations for BBC World Service transmissions, at Cyprus and at Tebrau on the southern tip of Malaya. At Daventry we had a special huge array, an HRRS 8/6,and two transmitters in parallel on 17.79 MHz. that was used mainly for feeding Tebrau with programme. For political reasons, after Singapore split from the Malaysian Federation, the Tebrau station closed and a new station was built at Kranji on Singapore Island.

In those days I never dreamed that I would one day visit the area at the other end of that beam! Even travel to Europe in those days seemed only for the rich! A few years ago I was able to visit my brother - in - law Robert (G4BWB) who was living in Hong Kong at that time and was able to visit the BBC relay station there not long before it closed.

Robert has now moved to Singapore where he is a TV producer and he invited my wife and I to visit him and his family this autumn. We went out there, taking in Dubai and Hong Kong on the way to see if there had been any changes since our last visit. We arrived in Singapore in mid-November for a 2 week stay with Robert and his family. I had already contacted Kranji by e-mail and they had kindly offered to let me visit the station during our stay.

I must admit that before my first visit to Hong Kong I had assumed that it was totally covered with buildings, as this is the impression given by all the tourist photos. I was surprised to find how much countryside there is in the territory. I had the same impression about Singapore and a casual visitor to the island would tend to agree, as there are large areas of high rise apartment blocks, apparently covering every inch of the island.

Once again, my impression was proved wrong. I telephoned Kranji to arrange a time for my visit and they warned me that I might have difficulty finding them and gave me detailed instructions, as they doubted that even a local taxi driver would know where they are! The address of the station is 51, Turut Track, which might give the impression that there are many other buildings along that road.

However, consulting Robert's street directory, page 39 revealed that Turut Track was in the middle of a blank page, with only one other building shown.

There is an excellent Mass Rapid Transit (MRT) rail system in Singapore and one of its stations is Kranji. Robert and I set off on the MRT and as the train approaches Kranji you can indeed spot the red and white towers of the radio station over to the West, looking as though it would be only a short walk to reach it. However, the map reveals that in the way is the large

Kranji reservoir.

We eventually managed to hail a taxi and sure enough the driver had never heard of the place or even of Turut Track. With the aid of the map I was able to direct him, which involves driving north to the coast, with its views of Johore Baru across the strait, then crossing over the dam at the reservoir and then heading south down a lonely road surrounded by green countryside. In fact it could almost be an English country road were it not for the banana and palm trees!

Eventually a small sign on the left proclaims 'BBC Far Eastern Relay Station' and Turut Track turned out to be just that, a narrow track that winds past the radio station owned by the local Singapore radio authority and then ends abruptly at the gate of the BBC station.

We were greeted by the operations manager, Yong Wui Pin, who took us to his very pleasant air conditioned office and introduced us to the two charming ladies who look after the administration there. One of them, Cindy Yeo, told us that she had been there almost since the station had opened and she invited us to sign the visitors book. They seemed genuinely pleased to see visitors and I was quite surprised to see that my name was the first entry in the book for 2001.

Obviously, given their location, they do not get many people passing by! In fact, the previous signature in the book was that of Mark Byford, the World Service boss, so we were in illustrious company.

Mr. Yong then showed us first around the stores and workshop areas, all nice and cool and air-conditioned. It was quite a contrast when we went out into the transmitter hall. Here it was very hot, even though our visit coincided with the 90 minute period when the station is shut down for maintenance.

To me, apart from the heat, it was a moment of great nostalgia! Way back in 1963 I was transferred from Daventry to Woofferton, the station located near the Welsh border, which at that time was primarily a Voice of America relay station and was just in the process of having its World War 2 vintage 50 kW RCA transmitters replaced by then brand new 250 kW Marconi BD272 units.

Nearly 40 years later, it was a bit of a shock to step into the sender hall at Kranji to see almost a replica of Woofferton, with those Marconi units still giving sterling service. The BBC has always called its short wave transmitters 'senders' for long forgotten reasons and at Kranji they are numbered Senders 102, 103 etc..

The BD272 units need manual wave changing, which in practice means they need to be closed down for 15 minutes at a minimum to manually remove some very large, heavy (and hot!) coils, insert ones for a different band and then tune up the sender on its new frequency. The final anode coils for the 41 & 49 metre band are very impressive, the antenna coupling coil is a single turn over a metre in diameter and made of tubing about 12 cms. across - quite a beast! Doing a rapid wavechange at Woofferton in cool England made you sweat profusely, I can imagine in the heat of Kranji, you rapidly lose some weight!

Power for the station is supplied by the local electricity authority and is transformed and rectified down to 11,000 volts D.C. to supply the anodes of the two BY1144 triode valves in grounded-grid configuration in the final stage of each sender. At full power these draw 26 amps. anode current, so some quite serious power is being consumed. The senders use high level modulation, which means they need something in excess of 125 kW of audio to give 100% modulation. This is provided by two more BY1144 valves in class B configuration. This means that the current they draw varies wildly with the modulation, thus the current being drawn by the station is not constant, particularly if all the senders are carrying the same programme. I remember that in Ludlow near to Woofferton, all the lights in the houses flickered in time with the modulation and when the Greenwich Time Signal 'pips' were broadcast at the top of the hour, you could check your watch by your house lights!

The sender hall is raised above ground level and when we went out of the hall we found ourselves on a balcony overlooking the aerial farm. I soon realised the reason for not going down into the field, the lush tropical vegetation is infested with some very nasty snakes - not a problem I had doing aerial switching at Woofferton! I was told that crocodiles had also been spotted in the area. Thus their 4 aerial rigging staff had to take great precautions when going out to their tasks in the field. All the aerial switching is done by air operated switches remotely controlled from the building, which must be a great relief to the staff!

Although the station is now operated by Merlin, the station still has a BBC 'feel' to it and I was interested to learn that the station operates on a three shift system with similar hours to that worked at the UK stations. Day shift is I think 09.00 to 17.00, evening shift is a short one until 23.00 and the night shift is the long one until 09.00. This used to be quite a good system, well liked by most staff, as it meant on evening shift you had most of the day free and could still be in bed by midnight.

Programme feed to the station is by satellite, via AsiaSat, and I was interested to hear that they now have no HF receivers for back-up if the satellite feed fails. BBC World Service in English is available for local listeners on 88.9 MHz FM, the programme feed for this is received at Kranji but is fed on to a site located with all the other domestic transmitters in the centre of the island.

I asked if they receive many reception reports at Kranji from SWLs and was told that they are forwarded to Bush House, London. (You know what happens to those!) I mentioned that while I was working on Ascension Island I used to answer reception reports personally, but I am not sure if this will have any effect at Kranji!

Interesting smells coming from the kitchen announced that it was nearing lunch time for the staff, so we bade our farewells to our hosts and suggested we phone for a taxi. The manager said that taxi drivers would never find the place, so he very kindly drove us to Kranji MRT station. A fascinating visit, full of nostalgia for me, with grateful thanks to the very friendly staff who took time out to show us around.

Having now seen the Hong Kong and Kranji relays, I must now persuade my wife that we need to visit Thailand next!

73, Richard G3VGW

Yes, it was highly incompetent of you to the title your post with reference to the "controversial" explosives at Al Qaaqaa, and now try to backpeddle furiously to cover the fact you were distorting the whole issue with phony "proof"-----just like your candidate.

Of course you're equally wrong about who was "moving the Army" (as if Bush makes the battle plan), but comapred to the first gaffe that's pretty minor. I doubt he's an armchair general like those complaining about moving fast.

1740. Survey Sees 100,000 Iraqi Deaths

Household Survey Sees 100,000 Iraqi Deaths

By EMMA ROSS
AP Medical Writer
October 28, 2004
LONDON - A survey of deaths in Iraqi households estimates that as many as 100,000 more people may have died throughout the country in the 18 months after the U.S. invasion than would be expected based on the death rate before the war.

There is no official figure for the number of Iraqis killed since the conflict began, but some non-governmental estimates range from 10,000 to 30,000. As of Wednesday, 1,081 U.S. servicemen had been killed, according to the U.S. Defense Department.

The scientists who wrote the report concede that the data they based their projections on were of "limited precision," because the quality of the information depends on the accuracy of the household interviews used for the study. The interviewers were Iraqi, most of them doctors.

Designed and conducted by researchers at Johns Hopkins University, Columbia University and the Al-Mustansiriya University in Baghdad, the study is being published Thursday on the Web site of The Lancet medical journal.

The survey indicated violence accounted for most of the extra deaths seen since the invasion, and air strikes from coalition forces caused most of the violent deaths, the researchers wrote in the British-based journal.

"Most individuals reportedly killed by coalition forces were women and children," they said.

The report was released just days before the U.S. presidential election, and the lead researcher said he wanted it that way. The Lancet routinely publishes papers on the Web before they appear in print, particularly if it considers the findings of urgent public health interest.

Those reports then appear later in the print issue of the journal. The journal's spokesmen said they were uncertain which print issue the Iraqi report would appear in and said it was too late to make Friday's issue, and possibly too late for the Nov. 5 edition.

Les Roberts, the lead researcher from Johns Hopkins, said the article's timing was up to him.

"I emailed it in on Sept. 30 under the condition that it came out before the election," Roberts told The Asocciated Press. "My motive in doing that was not to skew the election. My motive was that if this came out during the campaign, both candidates would be forced to pledge to protect civilian lives in Iraq (news - web sites).

"I was opposed to the war and I still think that the war was a bad idea, but I think that our science has transcended our perspectives," Roberts said. "As an American, I am really, really sorry to be reporting this."

Richard Peto, an expert on study methods who was not involved with the research, said the approach the scientists took is a reasonable one to investigate the Iraq death toll.

However, it's possible that they may have zoned in on hotspots that might not be representative of the death toll across Iraq, said Peto, a professor of medical statistics at Oxford University in England.

To conduct the survey, investigators visited 33 neighborhoods spread evenly across the country in September, randomly selecting clusters of 30 households to sample. Of the 988 households visited, 808, consisting of 7,868 people, agreed to participate in the survey. At each one they asked how many people lived in the home and how many births and deaths there had been since January 2002.

The scientists then compared death rates in the 15 months before the invasion with those that occurred during the 18 months after the attack and adjusted those numbers to account for the different time periods.

Even though the sample size appears small, this type of survey is considered accurate and acceptable by scientists and was used to calculate war deaths in Kosovo in the late 1990s.

The investigators worked in teams of three. Five of the six Iraqi interviewers were doctors and all six were fluent in English and Arabic.

In the households reporting deaths, the person who died had to be living there at the time of the death and for more than two months before to be counted. In an attempt at firmer confirmation, the interviewers asked for death certificates in 78 households and were provided them 63 times.

There were 46 deaths in the surveyed households before the war. After the invasion, there were 142 deaths. That is an increase from 5 deaths per 1,000 people per year to 12.3 per 1,000 people per year - more than double.

However, more than a third of the post-invasion deaths were reported in one cluster of households in the city Falluja, where fighting has been most intense recently. Because the fighting was so severe there, the numbers from that location may have exaggerated the overall picture.

When the researchers recalculated the effect of the war without the statistics from Falluja, the deaths end up at 7.9 per 1,000 people per year - still 1.5 times higher than before the war.

Even with Falluja factored out, the survey "indicates that the death toll associated with the invasion and occupation of Iraq is more likely than not about 100,000 people, and may be much higher," the report said.

The most common causes of death before the invasion of Iraq were heart attacks, strokes and other chronic diseases. However, after the invasion, violence was recorded as the primary cause of death and was mainly attributed to coalition forces - with about 95 percent of those deaths caused by bombs or fire from helicopter gunships.

Violent deaths - defined as those brought about by the intentional act of others - were reported in 15 of the 33 clusters. The chances of a violent death were 58 times higher after the invasion than before it, the researchers said.

Twelve of the 73 violent deaths were not attributed to coalition forces. The researchers said 28 children were killed by coalition forces in the survey households. Infant mortality rose from 29 deaths per 1,000 live births before the war to 57 deaths per 1,000 afterward.

The researchers estimated the nationwide death toll due to the conflict by multiplying the difference between the two death rates by the estimated population of Iraq - 24.4 million at the start of the war. The result was then multiplied by 18 months, the average period between the invasion and the survey interviews.

"We estimate that there were 98,000 extra deaths during the postwar period in the 97 percent of Iraq represented by all the clusters except Falluja," the researchers said in the journal.

"This isn't about individual soldiers doing bad things. This appears to be a problem with the approach to occupation in Iraq," Roberts said.

The researchers called for further confirmation by an independent body such as the International Committee of the Red Cross, or the World Health Organization (news - web sites).

The study was funded by the Center for International Emergency Disaster and Refugee Studies at Johns Hopkins University and by the Small Arms Survey in Geneva, Switzerland, a research project based at the Graduate Institute of International Studies in Geneva.

1744. Survey Utterly Clueless About Iraq Deaths

Newsgroup: rec.radio.shortwave
Date: 2004-10-28 20:30:57 UTC

Household Survey gives New Meaning to BS

By Pixonik
R.R.S. Medical Writer
October 28, 2004

LONDON - A survey of deaths in Iraqi households wasted a whole bunch of time and money by coming up with numbers that even the people conducting the survey say are worthless.

The scientists who wrote the report concede that the data they based their projections on were of "limited precision," because the quality of the information depends on the accuracy of the household interviews used for the study. The interviewers were Iraqi, most of them doctors.

Scientists also indicate that they hope the biased American press and loony liberals will pick up the story and fill in the blanks to make it look like the numbers are real. They were unwilling to comment on how many of the Iraqi dead were the result of constant terrorist attacks by those butchering their own people.

1745. more unusual military traffic

Newsgroup: rec.radio.shortwave
Date: 2004-10-28 20:40:00 UTC
From: HankG <no_one@invalid>
Message-ID: <l56dnbvJEry8xBzcRVn-ow@comcast.com>
Source record: 1745

I started monitoring 11.175 at 14:50z and heard a message of 217 characters, (the longest message I've ever heard--previous longest was about 120). This message was heard on this frequency only. During the repeat message, Offutt came up with other message traffic. This message was heard on 5 frequencies. This is unusual. I had never heard two different EAMs go out on 11.175 at the same time. I have heard the same message slightly delayed (receiving 2 stations). After their first message, Offutt came up with a Sky King call.

Back to the first: shortly after, a message of 48 characters was heard, after which the party signed off. He had ID'd himself as 'bee bread'. He then said, "Bee Bread standing by for traffic". No response.

Both Bee Bread and Offutt have continued to rebroadcast those 2 messages over and over. I have heard messages repeated but not like this.

After Bee Bread's signoff, he stood by for traffic. After a pause I heard him say, 5 Romeo Alpha, I have you Lima Charlie. Short pause, then signoff. Must be working duplex as nothng was heard from 5RA.

16:25z, Offutt broadcast a Sky King call.

developing....

Not everyone uses the 'standard' phonetic alphabet. I would have used Kilo 7 Romeo Lima. But each to his own.

My own callsign would be November 8 Kilo Delta Victor.

Enjoy,

Ok. Thanks to all for the replies. I'll tune it in again tonight
(if I get woken up by another thunderstorm).

I guess I'm used to the standard phonetic alphabet and his
use of other words threw me off a bit. That and I was
very much not all the way awake.

Anyway,
73's everyone.

No damage ..... unless it's hooked up to your radio when lightning
hits it. If you don't have an external shortwave antenna you may
notice some improvement over your current situation - though it is
hardly what I'd call a "prime choice" for shortwave.

Howard

My advice would be to give it a shot.
I've used old 300 ohm downlead wire
(which was just sort of "hanging" from
a 70 - foot tower), fed into my old Yaesu
FRG-7 with excellent results!

Remember that the antenna is horizontally polarized. If you get good
results then leave it be. If you want better reception then turn the
antenna 90 degrees for vertical polarization which is what all commercial
vhf and up communications is.

Good Luck

Yesterday it was 73, but today the winds came and now at 54. At around 6 pm it was still 74 over near Detroit, but started falling quickly.

Get used to it again!

That's more what I'm familiar with. I guess beause I fly I'm more
used to the 'standard' as well.

Anyway, I enjoy having one of my SWR's on the bedside table.
If I can't sleep or if I'm woken up I slap in the earplug (can't
disturbe the wife ya' know) flop an arm over and find and operate all
the buttons and knobs by feel alone in the dark. Get in some good
listening that way.

Oh you are sooo right. I have seen the light. Bush should have jumped up and yelled to all the 4 year olds "RUN FOR YOUR LIVES, YOUR MOMMIES CAN'T SAVE YOU NOW." Why didn't I realize that before.

1782. WBCQ - J Lightning brown noses Weiner - SO disgusting!

Newsgroup: rec.radio.shortwave
Date: 2004-10-31 02:40:09 UTC
From: Nomen Nescio <nobody@dizum.com>
Message-ID: <2aaaf246d71273e0b8c40c186e04c1ce@dizum.com>
Source record: 1782

Here is the slop JL wrote on his website. If anyone cares to vomit, they are welcome to read it.

Pirate James

This post is my attempt to lay to rest, any and all controversy regarding Big Steve Coles exit from my program and WBCQ.

As you may know, Big Steve has had numerous problems with WBCQ management over the years. I do not intend to interject any editorial comments regarding the validity of his or managements disagreements. If I have learned anything in the 17 years since I turned my 1.5 watt FM transmitter on and began my radio career, it is that there is invariably a little right and wrong on each side. That is as much comment as is required.

I was seriously disappointed with the Big Guys inability to walk away cleanly from his association with WBCQ. The web posting circulated by him late last week, was uncalled for. It was unduly harsh and mean spirited. Regardless of his problems with the station, I did not believe his caustic critique was called for, and I felt it showed disrespect to the very people who enabled him to remain a viable short-wave broadcaster, despite differences that would have made most station managers drop the program and the concomitant ajita.

I want it to be known that without a doubt station management and staff was obviously annoyed by Steves attempt to anger them. Indeed they were more disappointed in him than angry. Particularly as I have assured them on many occasions in the past that he was not a bad guy out to do them harm. His retirement letter proved otherwise, not to mention, made me look like a liar.

At no time did anyone in WBCQ management state or infer that I should dump the Big Guy. I do know that enough consternation was caused that such a situation almost occurred. Yet, management resisted doing so, going so far as to tell me that if I felt he should remain a part of 11L-RNI that would be fine and no recriminations against myself or the show would result from such a decision.

I however felt, that considering his rage and his severe criticism, criticism that could turn prospective clients away from buying time on The Planet, and the fact that he has tried to hurt the very people who have enabled me to serve you on the cheap, as in virtually FREE for the past six plus years, some action had to be taken.

I considered just telling the Big Guy he was finished, in effect firing him from his non-paying, not all that sweet gig with our show. The Big Guy, spared me doing so, by walking away of his own volition. He believed this would spare me pressure from the station. If I lead him to think that was the case, I was wrong, and that was not my intention. Frankly, there was no pressure, but I came to conclude that he no longer belonged on WBCQ, or as part of a show aired by WBCQ due to his ongoing disdain for station management.

Keeping Steve on board would have been dissing the people who have allowed me to skewer them and keep Radio NewYork International alive for so many years. Therefore, I believe my actions were correct and I do stand by them.

Regarding other postings that you may have read or heard of, the Big Guy will not be present in the studio during any shows, nor will he assist in its production or execution on any level. He will not be a part of my on air operation at all. A clean break is what is required and that is what I want.

The Big Guy is a friend, albeit one who has done wrong by me and WBCQ and I believe he realizes this. He knows I am deeply distressed by his actions and was not at all pleased. His ban from the proceedings should serve as ample proof of my disgust. He has pledged to do right by me, by pulling all incendiary postings, and has agreed to walk away without further sullying the situation or making problems for 11L-RNI with postings or comments that are just plain unnecessary. I expect this to be the case.

I can tolerate no further diversions caused by someone with a mega chip on his shoulder as it certainly does not inure to the benefit of my program or my ability to relate to and work with, my staff and the staff and management of WBCQ.

Let me close by reiterating, no pressure was brought upon me to relieve him of his duties. It was a mutual agreement. It was respectful of WBCQs management on my part, and respectful of my feelings on his part to end our on the air association as we have. I expect and will tolerate no further acrimony or activities that keeps me from focusing on what is important...the show and making it the best show I can present for your enjoyment.

Those of you on the receiving end of our signal, have little idea of the ongoing stress and pain, that management related and interpersonal staff problems have caused me since I was a pirate. I try to do what I believe is right as I see it...often however, I do fail. I misjudge, even choose the wrong side. Often, in trying to keep all parties happy, I have managed to do right by no one.

On occasion, my decisions and how I handle such problems as that imposed upon me by Steve have come at a cost to the quality of the show. Perhaps it is time I consider the show first and foremost and let those chips fall, regardless of who gets hurt. If that cannot be, believe me, I will walk, no, run away from this gig before I continue to have my mission to entertain and inform waylaid by what should be sidebar issues that you, our valued listeners, should never need to know of.

Any additional discussion of this issue by me would be a waste of my time. I will not address this subject again on the air, and will make anyone who tires to persona non grata.

Your comments would be appreciated, but Id prefer to have to not answer any additional questions regarding this matter. It is now past history that I hope all concerned especially yours truly, have learned something from.

Thank you for your time and attention to this posting.

Then they're not "open". And adding another signal, even a low power one, in this space would then interfere with the otherwise serviceable coverage closer in to these stations.

>> The new Chicago X-band station moved from downstate - Johnson City IIRC.
>> A station on that frequency in Chicago would not have been allowed if
>> WRLL had been operating downstate.

> I live within 15 miles of WRLL, and it's almost unlistenable at night after
> they drop power to 1 kW. Skywave comes in from all over. A much larger
> number of daytimers could be worked out, however.

That doesn't make the area unserved by WRLL's nighttime pattern "open". A facility allowed to fill in this "unserved" area would interfere with the stations whose skywaves come in from all over. And the FCC no longer licenses daytimers, and all attempts to apply for one will be rejected on this criteria. As it is, the FCC is looking for daytimers below 1600 (and encourages, through policies in place) to move to the X-band, in order to clear out the congestion and permit more regional service by the full-time stations on those frequencies.

> That's the point. The allowable amount of interference isn't really a
> technical consideration. At one extreme, we could have a very small number
> of true clear channel stations. Or we could have super saturated radio
> markets in which the only clear reception would be within the shadow of the
> station's antenna. Allowable interference is a political consideration, not
> a technical one.

Actually, no. The interference standards provide for usable coverages to the limits of receivers (very few radios will provide a listenable output at 500uV, the current protection limit for nighttime service, which affords a 26dB signal to noise ratio, give-or-take). But protecting out to that limit means that for every 20dB increase

in signal strength for the desired station (by moving closer to the transmitter) also means at least a 20dB boost in the signal to noise ratio...thus, the rural-grade 5mV/m contour would be a listenable signal. Allowing increased interference (by raising the protected contour to, say, 2mV/m) means that a listenable signal would be obtained at the 20mVm contour....which is a metro-grade signal-strength. So, in the interest of expanding coverage, you'd actually be reducing it. For both the new, as well as the existing, stations.

All the details about how this is done can be found at
http://kauko.hallikainen.org/FCC/FccRules/2003/73/182/ and
http://kauko.hallikainen.org/FCC/FccRules/2003/73/37/

>> IMHO the FCC has grounds to regulate both services on content if they
>> chose to do so. IMHO they need to either do so, or lift content
>> regulations on OTA.

Maybe so....but, for the former proposal, would you want a situation where the FCC can delve into the private affairs of these operations? You know, the next step would be censoring telephone conversations, as the analogy holds. Subscription services, and other non-broadcasting licensees, are not public entities. Better that if the FCC feels obliged to limit what can be said on OTA, they feel that it's the only area where such pervue exists. While I'm not so keen to remove those restrictions on OTA, the Canadians and other democracies have no such limits (although there's some discretion in how often the ability to say anything is exploited) and they haven't come to the end of the world.

Oh you are sooo right. I have seen the light. Bush should have jumped up and yelled to all the 4 year olds "RUN FOR YOUR LIVES, YOUR MOMMIES CAN'T SAVE YOU NOW." Why didn't I realize that before.

1789. Latest BPL information

Newsgroup: rec.radio.shortwave
Date: 2004-10-31 03:44:24 UTC
From: Pilotbutteradio <pilotbutteradio@yahoo.com>
Message-ID: <41845d56$1_1@127.0.0.1>
Source record: 1789

Latest BPL information from ARRL:

==>FCC BPL REPORT AND ORDER STRESSES INTERFERENCE AVOIDANCE, RESOLUTION

The FCC this week released the full BPL Report and Order (R&O) in ET Docket 04-37 that it adopted just two weeks ago. While extolling the purported benefits of broadband over power line technology, the 81-page document also declares the FCC's intention to protect licensed services from harmful interference.

"We recognize that some radio operations in the bands being used for Access BPL, such as those of Amateur Radio licensees, may occur at distances sufficiently close to power lines as to make harmful interference a possibility," the FCC conceded in its R&O. "We believe that those situations can be addressed through interference avoidance techniques by the Access BPL provider such as frequency band selection, notching, or judicious device placement."

Notches would have to be at least 20 dB below applicable Part 15 limits on HF, 10 dB below on VHF. The FCC called the ability to alter a system's operation to notch out transmissions on specific frequencies where interference is occurring "a necessary feature for resolving interference without disrupting service to BPL subscribers."

In line with remarks made at the October 14 open meeting where the FCC adopted the R&O--then still in draft form--the FCC declined to reduce the Part 15 radiated emission limit for BPL systems. It maintained that emissions from BPL systems are very localized and at low enough levels to generally preclude harmful interference.

The FCC said it had no evidence before it that BPL operation would significantly contribute to generally raising background noise levels. At the same time, it seemed to put some of the onus on Amateur Radio licensees to take steps to avoid power-line interference--and, by inference, BPL interference--in advance.

"In addition, because power lines inherently can radiate significant noise emissions as noted by NTIA and ARRL, good engineering practice is to locate sensitive receiver antennas as far as practicable from power lines," the FCC said.

In a footnote, the FCC took pains to advise ARRL that in cases where its members experience RF noise, "such noise can often be avoided by carefully locating their antennas; in many instances an antenna relocation of only a relatively short distance can resolve noise interference."

BPL operators would be required to avoid certain bands, such as those used for life and safety communications by aeronautical mobile or US Coast Guard stations. The FCC R&O makes clear, however, that similar rules will not apply to the Amateur Service.

"We similarly do not find that Amateur Radio frequencies warrant the special protection afforded frequencies reserved for international aeronautical and maritime safety operations," the Commission said. "While we recognize that amateurs may on occasion assist in providing emergency communications," the FCC added. It described typical amateur operations as "routine communications and hobby activities."

Although some cases of harmful interference may be possible from BPL emissions at levels up to Part 15 limits, the FCC said, "we agree with NTIA [National Telecommunications and Information Administration] that the benefits of Access BPL service warrant acceptance of a small and manageable degree of interference risk." The Commission reiterated in the R&O its belief that BPL's public benefits "are sufficiently important and significant so as to outweigh the limited potential for increased harmful interference that may arise."

Among other specific provisions, the FCC's new rules mandate certification of BPL equipment instead of the less-stringent verification, a public BPL database--something the BPL industry did not want--and mechanisms to deal swiftly with interference complaints. BPL systems will have to incorporate the ability to modify operation and performance "to mitigate or avoid potential harmful interference" and to deactivate problematic units, the R&O says.

Further, the new rules spell out the locations of "small geographic exclusion zones" as well as excluded bands or frequencies--concessions made primarily at the insistence of the NTIA, which administers radio spectrum for federal government users--and "coordination areas" where BPL operators must "precoordinate" spectrum use. The rules also detail techniques to measure BPL emissions from system equipment and power lines.

The FCC said it expects "good faith" on both sides in the event of interference complaints. While the Commission said it expects BPL operators to take every interference complaint seriously and to diagnose the possible cause of interference quickly, it also suggested that complainants have responsibilities.

"At the same time, we expect the complainant to have first taken reasonable steps to confirm that interference, rather than a receiver system malfunction, is occurring and, to the extent practicable, to determine that the interference source is located outside the complainant's premises," the Commission said.

Shutting down a BPL system in response to a valid interference complaint "would be a last resort when all other efforts to satisfactorily reduce interference have failed," the FCC said.

League officials are studying the R&O and considering possible responses. The ARRL Executive Committee (EC) already has authorized filing a Petition

for Reconsideration. The EC also authorized ARRL General Counsel Chris Imlay, W3KD, to "prepare to pursue other available remedies as to procedural and substantive defects" in the BPL proceeding.

For more information on BPL, visit the "Broadband Over Power Line (BPL) and Amateur Radio" page <http://www.arrl.org> on the ARRL Web site.

==>STATE UTILITIES COMMISSIONERS' BPL TASK FORCE SESSION YIELDS SOME INSIGHTS

ARRL Chief Technology Officer Paul Rinaldo, W4RI, represented the League this week at a meeting of the National Association of Regulatory Utilities Commissioners (NARUC) Broadband over Power Lines (BPL) Task Force. Michigan Commissioner Laura Chappelle chaired the October 24 gathering in Alexandria, Virginia. Its aim was to give NARUC BPL Task Force members an overview of federal regulations, an industry perspective, and insight into potential state regulatory issues related to BPL. NARUC consists of state utility regulators who have no jurisdiction over RFI issues, Rinaldo explained after the meeting.

"However," he said, "it's good that they are aware that there's a potential interference problem that could complicate life at the local level when hams complain to utilities about interference." On the other hand, he noted during his presentation, "BPL may be a distraction from a utility's main function of delivering reliable power to customers." During a question-and-answer session, the state utility commissioners posed no questions regarding BPL interference, Rinaldo said.

Rinaldo's presentation, "BPL--Amateur Radio Perspective," pointed out a paradox in the new regulations: "The R&O excludes frequency bands for those facilities typically away from BPL installations," he said. "However, it does not exclude frequency bands for those stations, such as Amateur Radio, typically closest to residential BPL installations." Rinaldo noted that ARRL and National Telecommunications and Information Administration (NTIA) BPL measurements "are consistent" with each other. The NTIA had determined that even at Part 15 emission limits for reception of low to moderate-strength signals, BPL interference extends out 460 meters (approximately 1509 feet) for fixed stations.

Among suggested BPL "best practices," Rinaldo recommended that BPL providers exclude Amateur Radio bands "by design" rather than awaiting complaints. If complaints do arise, BPL providers should "promptly eliminate interference," he said. Rinaldo also stressed Amateur Radio's emergency communication role.

Precursor Group CEO Scott Cleland spoke on "The Alchemy of Broadband over Power Lines." While focused primarily on investments, Cleland's presentation also asserted that that technical alchemy "has finally overcome the heretofore insurmountable barrier of noise interference in an economically viable way."

The United Power Line Council's Brett Kilbourne told the gathering that all technical problems confronting BPL had been solved and that it was

time to roll it out. "I bit my tongue," Rinaldo remarked later.

During a discussion on "open access," Rinaldo said, the mood of the Commissioners was not to regulate how many BPL providers might have access to a given utility system, "which logically means that only one provider would be practical," he concluded. "That is, if one provider hogs all the bandwidth and/or time on the bands not notched, it would be virtually impossible to have the original provider back out just to let a competitor in."

Franca and Current Technologies' Jay Birnbaum allowed that there wasn't much bandwidth to begin with, and, Rinaldo said, subdividing it wouldn't make much sense.

Discussion also touched on the timing of BPL rollouts and competition from well-established cable and DSL as well as growing wireless system providers. "From the discussion, I got the impression that rollout would take about 4-1/2 years," Rinaldo said. "Over that time, cable, DSL, fiber, wireless and satellite broadband providers will provide strong competition."

From ARRL email bulletin.

Both. You will want one in your vehicle and one in your "go bag" that
is fully charged and hopefully has a battery pack that takes "AA"
cells of which you will also keep with the radio. Pre-program both
units to the frequencies you use in your area and also keep a 'cheat
sheet' with same just in case.

Also -and this is a BIG also - prior to the emergency you should
become a part of the organized response team whether ARES or RACES.
If you haven't trained with your peers and the agency(ies) you will be
serving your utility as a 'team member' will be little in terms of
on-air support. In fact, in regard to RACES if you are not already
part of the RACES organization you will not even be acknowledged once
RACES Rules are instituted during a disaster and your trying to
communicate with them will impair their ability to carry out their
mission. However, there are many 'off-air' things that need to be
tended to such as rounding up the trained members, handling logistics
(emergency responders need water, food, rest accomodations etc). You
also need to understand their organizational structure and emergency
call-up procedures, this is necessary to be effective for both on-air
and off-air support.

Not trying to rain on your parade, but emergency comm's is more than
just buying a radio and expecting it to be useful during "the big one"
(whatever your area's 'big one' may be).

Howard

During that 7 minutes, the Secrete Service was trying to gather facts
about what had happened and was making the decision as to where the
President should go.

You know what the idiot Kerry was doing all that time?

Here's what the Massachusetts Democrat said July 8 when Larry King asked
where he was on 9/11, according to CNN's own transcript:

'Nobody Could Think'

"I was in the Capitol. We'd just had a meeting - we'd just come into a
leadership meeting in Tom Daschle's office, looking out at the Capitol.
And as I came in, Barbara Boxer and Harry Reid were standing there, and
we watched the second plane come in to the building. And we shortly
thereafter sat down at the table and then we just realized nobody could
think, and then boom, right behind us, we saw the cloud of explosion at
the Pentagon. And then word came from the White House, they were
evacuating, and we were to evacuate, and so we immediately began the
evacuation."

"the second plane hit the World Trade Center at 9:03 a.m., and the plane
hit the Pentagon at 9:43 a.m. By Kerry's own words, he and his fellow
senators sat there for forty minutes, realizing 'nobody could think.'"

So for forty minutes, Kerry sat there, unable to think. Now imagine him
as President, sitting there dumbfounded unable to think...FOR FORTY MINUTES.

Stop giving mongoloids a bad name. They want nothing to do with this repetitive, abusive, and syphilitic stroke victim.

As for Cronkite, I remember being a kid and getting up really early to watch the rocket launches from Cape Canaveral. On one occasion there was a delay and Cronkite just about cried. His eyes were wet with disappointment. You could feel his sadness.

The man is part of United States history and to have the local yokels calling him idiot shows more about them than anything Cronkite has or will ever do.

His coverage of John Glenn's return to space was excellent. The man is a living tribute to journalism. Only real haters of the American way of life would insult him with this petty and moronic name calling.

There really is no "best"..... it all depends on the particular situation and usage at the time. Generally mobile units have more power, better range and longer lasting power sources (car battery).... but you are tied to a vehicle or must lug a heavy high amp hour battery around...so they are not nearly as mobile.

A portable has limited power but this often isn't a factor unless you are far from a repeater. The beauty of a portable is it's ability to pretty much go anywhere.

In short you can do things with a mobile you can't acccomplish as surely with a portable.... but under certain circumstances the reverse is also true. I'd have both.

No, a real democracy is based on (1) campaigning (2) choosing a winner (3)
the winners LEADING.

Only Librul LOSERS spend their days whining, crying, kicking, and screaming
like the little babies they truly are.

You're confusing elections with democracy itself.
Elections are a component of democracy.

1805. LeSEA-Broadcasting

Newsgroup: rec.radio.shortwave
Date: 2004-11-06 13:58:25 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <cmila1fvm1@titan.btinternet.com>
Source record: 1855

USA (Indiana): The US-American religious network LeSEA-Broadcasting has released the new winter schedule for its short wave stations.

Although transmissions were moved from WHRI Noblesville to WSHB Cypress Creek transmissions are still listed as WHRI - Angel 1 and WHRI - Angel 2. Since this purchase the long standing continuity of the WHRI schedule, has been replaced by much more complicated schedules. This winter's schedule is the most complicated thus far.

Angel 1 (to the Americas)
0100 - 0600 7315 kHz Sa Su
0100 - 0500 5835 kHz Mo-Fr
0500 - 0600 5970 kHz Mo-Fr
0600 - 1000 7315 kHz
1000 - 1300 9495 kHz
1300 - 1900 15105 kHz
1900 - 2200 15665kHz
2300 - 0100 7315 kHz

Angel 2 (North America, Europe, Africa)
0800 - 1100 5860 kHz
1100 - 1300 7535 kHz
1300 - 2200 9840 kHz
2200 - 0800 7535 kHz

The overall schedule of the Pacific and Asia station KWHR Hawaii continues to be cut back. Obviously there is less demand by US-groups for short wave broadcasting over a station that does not have a primary or secondary coverage of North America. On the other hand KWHR carries programmes from Radio Free Asia and dissident groups.

Angel 3 (to Asia)
0200 - 0400 17510 kHz
0400 - 0600 15220 kHz
0600 - 1900 9930 kHz

Angel 4 (to Oceania)
0600 - 1000 11565 kHz
1000 - 1200 11565 kHz Sa Su
The African schedule of WHRA Greenbush has also been cut back.

Angel 5 (to Africa)
0000 - 0400 7580 kHz
0400 - 0500 5850 kHz
0500 - 0600 5835 kHz
0600 - 0800 7580 kHz

1300 - 1600 17560 kHz
1600 - 2100 17650 kHz
2100 - 0000 9455 kHz

(analysis by Dr. Hansjoerg Biener-D, via BC-DX 6 November 2004)

Brian, are you a tad confused there, dude????

Did you notice the title of the newsgroup??

"rec.radio.shortwave"

That means postings for this group pertain to shortwave radio despite
your other interests. Post your other interests in groups devoted for
them.

And your posts contributing to this group are where exactly? Fuck off,
bitch.

If you broadcast your live scanner over the net did you know you can now send your listeners live text data so they know what services they are listening to?
To view how this is done visit my web page below and click on my scanner tutorial page then click on metatag tutorial click here.
To see the text data in action visit my main web page below then click on listen feed1 and in around 2 minutes or so you will see the text data in your Winamp player showing what your listening to very cool check it out!!!!

I agree. Spock is a badass. Remember the show where him and Kirk were on the
planet run by Mobsters and Spock made a radio from old tubes and components
so they could talk to the Enterprise?

Yes, I am. It is called a simple matter of supply and demand.

Mother nature uses it very well and has "evolved" for millions of years.

Only the strong shall survive - including "money", people and ideas.

Yours, well, destined for the ash heaps of history I'm afraid.

From the ARRL at URL:
http://www.arrl.org/tis/info/touchlamp.html

Light-dimmer Interference Reduction

Radio Amateurs who've have been cursed with RFI from solid-state light dimmers will be interested to know that at least one domestic manufacturer -Lutron - produces light dimmers that incorporate RFI suppression techniques. The Lutron NOVA series uses toroidal chokes that provide a significant level of RFI suppression.

I bought a Lutron model N-600, which will handle up to 600 watts of incandescent lighting. Temporarily installed in my radio shack, a generic light dimmer produced an S9+ reading at 230 kHz (an arbitrary noisy frequency). The N-600 produced a reading of S3, a difference of about 40 dB. Admittedly, this is not zero, but installing the N-600 some distance away provided a reduction in RFI that is very gratifying. Indeed, I new hear new noise sources, heretofore undetectable through the dimmer din.

You're not likely to find these dimmers at your local discount store, and they are not inexpensive. Check for the availability of these dimmers at a lighting fixture store and expect to pay about $25 apiece for them.

-- Richard G. Brunner, AA1P, 10 Brookside Dr., Foxboro, MA 02035

Lutron Electronics Co., Inc.
Suter Rd.
Box 205
Coopersburg, PA 18036
215-282-3800

If you come up with a better solution for these problems, please write to the RFI Desk with the solution. It sounds like it would be a good candidate for Hints and Kinks!

1817. OT: Kerry's folks helped Bush win!

Newsgroup: rec.radio.shortwave
Date: 2004-11-06 16:01:50 UTC
From: Al Patrick <arp@_NOSPAM_inet4u.com>
Message-ID: <10optbk44foofa0@corp.supernews.com>
Source record: 1867

I took an elderly lady to the polls on Tuesday and helped her vote as she was visually impaired. (I had voted early.) I hadn't gotten the car parked when someone was standing outside to tell me how to vote. "Hi! I'm with the [blankety blank] political action committee and THIS is the folks we recommend you vote for." I gladly took the list and helped the lady vote exactly opposite to what all the liberals wanted!

Next time, DON'T toss that list of recommendations too soon. It just might tell you who NOT to vote for. :-)

Al

Al

I had the same experience when I went to the polls, except the folks doing
the electioneering were handing out republican sample ballots and other
paraphernalia for Bush and so on. I mean, that's what electioneers do.

1821. The radio on Gilligan's Island

Newsgroup: rec.radio.shortwave
Date: 2004-11-06 16:57:31 UTC
From: lsmyer <myer413ny@hotmail.com>
Message-ID: <10oq0jmhvd4sicd@corp.supernews.com>
Source record: 1871
Cross-posted to: alt.radio,alt.radio.broadcasting,rec.radio.shortwave

Since the mid-1960s, I have searched far and wide to find a radio that had such good reception as the one on Gilligan's Island.

That incredible DX powerhouse of a radio could regularly pick up US mainland broadcasters -- KDKA comes to mind -- from its location on a tiny island located thousands of miles from the US mainland deep in the South Pacific. Not just at night, mind you, but right in the middle of the day.

Also, this radio contained some amazing self-generating batteries. They never ran low, despite the fact that there was no AC plug available for charging purposes, nor did it have any type of crank-based charging mechanism. It's possible that the batteries might have been the product of a secret military cold-war era attempt at attaining a self-sustaining, zero-point energy equilibrium.

I would like to get one of these radios and hopefully some of those batteries as well. If anybody finds one on ebay, be sure to post it here. Thanks.

You are - at this time - the major contributor of SPAM in this newsgroup.

Again: please stop posting SPAM and please refrain from trying to be a "moderator" on this newsgroup. You're not Al Haig and you're not in charge.

II've never seen you post anything about shortwave radio so can only surmise that you're SPAMming rec.radio.shortwave just to get people irritated at you and treat you just like your mommie and dada do so that you can feel like a big "man".

Did you know that everytime you send a SPAM, it cuts off one day of your life? For your health's sake, stop SPAMming. When you get into junior high school, you'll understand better.

Gray Shockley

I don't think "she" will listen.

I think it will be far more effective to send abuse complaints to:

abuse@verizon.net

Clearly, "she" is mentally unbalanced, making references to me
personally, where I live, my wife's name, etc.

"She" is obviously willing to go waaaay over the edge, so I don't
think it will do you any good to appeal to "her" better nature. Better
to send a complaint to the address above, and hope the Verizon will

do the right thing, and at least send her a warning.

Message-ID: <cmj3c9$a06$1@sparta.btinternet.com>
Source record: 1892

High solar flux (expected to drop rapidly from about 200 to about 120 during 2002), high A-index (over 10) geomagnetic storms, proton events and polar-cap absorption are bad news; they tend to mean poor long-distance reception of medium wave and tropical band shortwave stations, especially paths over polar areas and paths to east and west of your location are affected. If you live far north, reception may be good towards south and vice versa on the Southern hemisphere.

Indices from the U.S. NOAA Space Environment Center in Boulder Colorado, updated every three hours and published in real time at http://www.dxing.info/propagation/

That's true - Clinton probably wouldn't
have won without Perot in 92, but he
was very strong in 96. My purpose was
to respond to the OP who made the point about
the country being more divided under Clinton.
Clinton was a very popular president, and his
support was not nearly as regional as both
Bush's and Kerry's - he took about 90 more
electoral votes than Bush in his second election
and in his first as well.

My issue was with the original poster's comment
about divided. I agree with you that the notion
of "divided" is subjective, but whatever divided
means, the closeness of an election doesn't
really say that much about it. An election
can be roughly even, but if the parties had nominated
Tweedledee and Tweedledum, it was just a popularity
contest and didn't speak to how divided people were
on issues. Conversely the election can go 60/40 and
if the 40% strongly hold a position that is very much
at variance with that of the other 60%, the country
is divided.

And by the way, Bush referred yesterday to the political
capital he earned in his FIRST election. Isn't that
waving a magic wand over a minority president?

Only 59% of the electorate voted. Of that 59%, 30% voted for
Bush and
29% voted for Kerry.

Therefore 30% of the electorate voted for Bush, this is not
THE AMERICAN PEOPLE.

This is not a mandate to dismantle the New Deal or to turn
Fallujah into a parking lot,
Iraq into a desert.

This is against the law to coerce people to vote some way around a
polling place. These people should be reported to the elections division
where they will be sanctioned in future elections.

believe what you want to, if spreading lies helps your cause, so be
it.
i tend to think that a rational person could defend their position
with the truth, but since this ng has seen the likes of everyone from
strom to lloyd one more liar won't make any difference.
now, back to the radio.

But 52% over 47% is, which is the margin by which President Bush trounced
the inept (and disgusting) John Forbes Kerry.

I did listen, but unfortunately missed the first 10 minutes or so.
Frank is no die hard Bush supporter, but he is a die hard Kerry
hater, so he was in pretty good form. I think he was just as pleased
at the house and senate seats won by the repubs. Especially Daschle
looooooosing. I hope Daschle ends up selling used cars, he'd be
good at that.

Unlike yesterday I'm getting great reception on the upper bands today.

If a transmission is directed here it sounds like a local BCB station
today no DRM needed.

No, it is not against the law at all. Electioneering is prohibited within a
certain number of feet of the actual polls.

I REALLY am sorry to contribute to the perpetuation of a horseshit thread, but I have to say that the link in this post sent me to one of the most ignorant, illiterate and addle-brained sites I've ever seen.
I am not even a Republican, but my God! This site is incredibly poorly done. If you believe this crap, you'll believe anything.
The amount of skewing of facts and figures and stats online, and on MUCH of SW, on all sides of the political fence is really mind-blowing. It wasn't rigged, it wasn't a sweep, it wasn't anything else. It is just a part of being an American, supporting what you feel is right, and fighting what you feel is not.
Why do you extremists (on either end) have to make everything a thousand times more complex and muddled by raving about inane (and wholly untrue) subjects like this one? The struggle for balance, justice and peace on a daily basis is tough enough for any citizen worth the name. This crap just makes it that much closer to impossible to get anything decent done.
Sorry for the OT contribution. Now back to SW.
Linus

No. That's fascism. This isn't a fascist state quite yet...although you and your idiot king can keep trying. In a republic we don't HAVE to START LIKING ANYONE. In the American republic, we have a little thing called dissent. It's not the running off out of the light of a newsgroup that cockroaches like Billy Beck and Wayne Mann did, only to come back when your team is on top. It's day by day criticism. So I tell you what, fascist...YOU START LIKING YOUR POLICE STATE. I'll keep denouncing it.

Quoth "Tian_Li" <look@strife.org> in news:10oqdh0q34cnncc@corp.supernews.com:

[tripe snipped]

You Republicans do love to lie, don't you? And this is an old lie,
long debunked.

From <http://www.snopes.com/inboxer/outrage/panthers.htm>:

Claim: Hillary Clinton played a significant role in
defending Black Panthers accused of torturing and murdering
Alex Rackley.

Status: False.

Example: [Collected on the Internet, 1999] (example redacted -- tb)

Origins: It's difficult for those who weren't around to
experience the 1960s first-hand to fully understand the
controversy that swirled around "radical" parties such as the
Black Panthers. Certainly to many Americans they represented
the very worst of that era's political movements: a group of
hate-filled militants who felt their disaffection with the
existing social and political systems justified anything
required to achieve their aim of "revolution by any means
necessary" (such as smuggling guns into a Marin County
courtroom in an attempt to free Panther George Jackson,
resulting in a shoot-out that killed a judge, two inmates, and
Jackson's brother). To others, however, they were the only
political group that truly represented a downtrodden and
marginalized group of people who had been enslaved,
discriminated against, and denied civil rights protections for
hundreds of years; that sought to improve the condition of the
poor by operating schools, opening medical clinics, and
providing free breakfasts for ghetto children; and that had
the courage to stand up to the brutality visited upon them by
law enforcement acting in the service of a government and a
society that sought to "keep them in their place."

In May of 1969, Black Panther founder and national chairman
Bobby Seale (who had already been indicted for his alleged
participation in demonstrations at the Democratic National
Convention in Chicago in August 1968) made a trip from Oakland
to New Haven, Connecticut, to speak at Yale University. The
Black Panthers were by then nationally known, a focus of media
attention, and under the active surveillance of the FBI. (J.
Edgar Hoover had publicly declared several months earlier that

he considered the Panthers "the greatest threat to the internal security of the country.") Rumors of police informants and government spies having infiltrated the party were rampant, and a man named Alex Rackley, a member of the Panthers' New York chapter, fell under suspicion. Rackley was taken to the home of Warren Kimbro (a "community organizer and aspiring Panther") where he was held captive for 24 hours, beaten, and scalded with boiling water in an effort to force him to confess. Rackley was then taken to a marsh in Middlefield by Kimbro, George Sams (Panther field marshall and, according to some, himself a police informant), and Lonnie McLucas (a Panther member from Bridgeport), where Sams ordered Kimbro and McLucas to kill the suspected informant. (Who did the actual killing has always been disputed; McLucas reportedly fired the first shot, but Kimbro admittedly delivered the bullet to the head that killed Rackley.) Rackley's body was discovered the next day by fishermen, and fourteen Black Panthers were arrested and charged with murder, kidnapping, and conspiracy.

That several Black Panthers directly took part in the torture and murder of Alex Rackey is beyond dispute, and to those of us who believe that torture and murder are always wrong, no matter what the cause, their actions were morally reprehensible. But this piece isn't really about outrage over what the Black Panthers did thirty years ago; it's a political tract whose purpose is to discredit the Clintons by associating them with the Black Panthers. Of the hundreds of people who played part in the Black Panthers' New Haven trial three decades ago, the only ones named here are Hillary Clinton (currently our First Lady and a candidate for a U.S. Senate seat in New York), and Bill Lann Lee (acting head of the Justice Department's civil rights division, whose appointment by President Clinton remains controversial because of Lee's support for affirmative action programs).

So, exactly what connection do Ms. Clinton and Mr. Lee have to the Black Panthers? The piece quoted above claims:

How in the world do you think that these killers got off so easy? Well, maybe it was in some part due to the efforts of two people who came to the defense of the Panthers. These two people actually went so far as to shut down Yale University with demonstrations in defense of the accused Black Panthers during their trial.

We'll begin with the last part, and it's simply ludicrous. Yale University was not "shut down" during the trial. Classes were made optional when 12,000 Panther supporters swarmed the campus in protest, and the president of Yale University himself, Kingman Brewster Jr., announced: "I personally want

to say that I'm appalled and ashamed that things should have come to such a pass that I am skeptical of the ability of Black revolutionaries to achieve a fair trial anywhere in the U.S." To lay the entire responsibility for this massive, widespread protest on the shoulders of two Yale students is just silly, all the more so because nobody has offered evidence that either one of them led, or even participated in, any student demonstrations or protests in support of the Black Panthers. Nevertheless, even if they didn't actually lead or take part in any demonstrations they're still guilty by association, we're told, because they "defended" the Black Panthers.

One of the elements often employed in political screeds such as this one is the ambiguity of the word "defend." It can be used in the sense of providing legal aid to a person accused of a crime, or in the sense of supplying moral justification for a person's actions. Sometimes these two concepts go hand in hand; but often they don't. We often find it necessary, in order to preserve and protect our rights, to defend (in a legal sense) those whose actions we consider morally wrong, and to defend (in a moral sense) those who actions we find legally wrong. We sometimes let criminals go free because constitutional safeguards were violated in the process of bringing them to justice. That doesn't mean we condone their crimes; it means we're willing to "defend" their rights in order to preserve a higher moral principle (i.e., the rights that protect all of us).

What has been overlooked (or deliberately ignored) in the piece quoted here is that even though fourteen Black Panthers were arrested and charged with murder, kidnapping, and conspiracy in connection with the murder of Alex Rackley, only two of them were put on trial (the others plead to lesser charges, or the charges against them were dropped): Bobby Seale and Erika Huggins. Why only these two? Seale wasn't present at either the torture or murder of Alex Rackley; he maintained that he knew nothing about any plans to kill Rackley and wasn't even aware that Rackley was suspected of being a police informant. (Panther George Sams did claim he had told Seale about suspicions Rackley was an informant, however.) Erika Huggins wasn't present when Rackley was killed, either. She was accused of having taken part in the "interrogation" of Rackley, boiling the water used to scald him and kicking him while he was tied to a chair. Certainly her actions were both criminally wrong and morally reprehensible, but several other Panthers took a far more active hand in the torture and murder of Rackley (such as those who actually poured the boiling water onto him, beat him, and shot him in the head). Why were only these two people put on trial while the other Panthers were allowed to plead

out or weren't even prosecuted at all?

Many people genuinely believed, at the time, that the government was deliberately prosecuting for murder people whom it knew full well were not guilty of murder in order to discredit a group it perceived as a threat, and that perhaps the government had deliberately sacrificed Rackley by planting him in the Panthers' midst and then leaking his cover in order to provoke a showdown. (The fact that neither of the accused was ever convicted is taken by some as proof of the correctness of this theory; others dismiss it as irrelevant and maintain that the case was far too politically controversial to allow for a fair verdict.) If Bobby Seale, the head of the Black Panther party, could be convicted and sent to prison for murder, the Black Panthers would lose a great deal of public support and credibility and be disarmed as a threat to the government. This, it was widely held, was the government's real motivation for prosecuting only Seale and Huggins while other Panthers who were more directly involved in Rackley's murder went free or were allowed to plead to lesser charges (in exchange for turning state's evidence against Seale and Huggins).

The key point here is not whether this notion was ultimately right or wrong. The key point is that many people believed it to be true at the time, and they therefore "supported" the Black Panthers during the subsequent trial (in a legal sense) - not necessarily because they condoned the (alleged) actions of the two people on trial (or the Black Panthers in general), but because they felt it was morally wrong for the government to prosecute murder charges against only two people, neither of whom was directly involved in the murder of Alex Rackley, all for political purposes. So, one cannot simply tar everyone who "defended" the Panthers with the same brush of moral outrage; many found the Panthers and their actions odious but still "defended" them because they honestly believed the government's attempts to prosecute only a select two of questionable guilt (while letting confessed torturers and murderers off with a comparative slap on the wrist) to be the far greater injustice.

So, what exactly did Mr. Lee and Ms. Clinton do to "defend" the Panthers in a legal sense? In Mr. Lee's case, he did absolutely nothing. He wasn't a lawyer, or even a law student; he was simply another Yale undergraduate who had nothing to do with the Black Panthers' trial. Ms. Clinton wasn't a lawyer then, either; she was a Yale law student. The sum total of her involvement in the trial was that she assisted the American Civil Liberties Union in monitoring the trial for civil rights violations. That a law student's tangential participation in one of the most controversial, politically and racially

charged trials of her time (one that took place right on her doorstep) to help ensure it remained free of civil rights abuses is now offered as "proof" of her moral reprehensibility demonstrates that McCarthyism is alive and well - some of us apparently believe in rights but don't believe everyone has the right to have rights.

Of course, neither Mr. Lee nor Ms. Clinton had anything to do with "defending" the other twelve Panthers, who never even stood trial because the government declined to prosecute them or allowed them to turn state's evidence. The flimsy "evidence" typically mustered as "proof" of their "support" for the Black Panthers is that Hillary Clinton was co-editor of the Yale Review when it printed a derogatory cartoon depicting police as decapitated pigs, even though no one has demonstrated that she approved (or even knew) of it, and that in order to join a student group, Bill Lee once "acquiesced when pressed to write a statement expressing solidarity with the Panthers who were on trial." (If Mr. Lee was such a wholehearted supporter of the Panthers, one has to wonder why he had to be "pressed" into making such a statement.)

In a woefully bad piece of "journalism," Insight magazine writer John Elvin tried his best, despite his lack of any real evidence, to huff and puff and assert as true the claim that Hillary Rodham was leading campus protests in support of the Black Panthers. His conclusion was a model of disingenuousness:

Can there be any doubt, based on the foregoing facts, that Rodham and Lee indeed were student leaders during the Panther protests at Yale? The correct answer is no.

Sure, the answer is "no," because the wrong question has been asked. That Hillary Rodman could fairly have been described as a "student leader" is something no one would dispute. The question being asked here is "Was Hillary Clinton leading campus protests in support of the Black Panthers?" -- a question Elvin dishonestly avoids answering because he can't demonstrate the answer to be "yes." The "foregoing facts" he refers to can be summarized thusly:

* The person who started this rumor says it's true.

* Hillary Rodham associated with people I don't like.

* A bunch of books I don't name say she was a campus activist.

The first two items have no probative value, and the third is carefully worded to conceal the fact that the writer is really stating nothing more than an obvious point no one would dispute, while trying hard to create the misleading impression

the point that he can't prove (i.e., that Hillary Rodham actually led campus protests in support of the Black Panthers) is true:

Insight reviewed biographies of Hillary Clinton by Milton, Brock and Roger Morris for this story and lengthy selections from such other biographies as Barbara Olson's Hell to Pay. Together, relying on primary and other firsthand sources, they unquestionably back Horowitz's contention that Hillary was a campus leader during the Panther protests. She was, by standards of those chaotic and violent times, a moderate voice compared with such fanatics as Yippie leader Jerry Rubin, who exhorted Yale students to "kill your parents," but she played a prominent activist role.

Yes, Hillary Rodham was a "campus leader" and played an "activist role" in her university days. So what? The same could be said of thousands of other people who protested the Vietnam War, or campaigned to get 18-year-olds the vote, or supported equal rights for women. None of that demonstrates anything about Hillary Rodham's alleged support of the Black Panthers. Elvin himself admits that she was "a moderate voice," and it's significant that he doesn't quote from, synopsize, or even identify by title any of the "reviewed biographies" he alludes to, because none of them supports the impression he's trying to create. Not a single one of these biographies quotes anyone who actually saw Hillary Rodham taking part in campus protests for the Panthers, but nearly all of them quote people who knew her back then as saying that radical protest politics simply weren't her style, and that she preferred getting two sides together for reconciliation rather than confrontation. For example, in The Seduction of Hillary Rodham Clinton by David Brock, we find:

. . . Hillary took her moral bearings from the radicals while favoring establishment tactics . . . This enabled her to work within the mainstream and to retain the respect and admiration of those in power. "She was always careful not to stray," said Robert Borosage. "For example, the yippies erected an air balloon tent on campus and lived in it. She wasn't a part of that. She probably had a sense that that was a politics that wouldn't work."

[. . .]

By the end of her first year at Yale, it was clear that Hillary abjured the in-your-face political tactics of Jerry Rubin as well as the exhibitionistic and hedonistic side of the 1960s. She was practical, pragmatic, and mainstream in her strategies, tactics, and presentation.

Stripped of all the invective and blatant political ranting, the case here against Mr. Lee and Ms. Clinton comes down to nothing more than "We don't like their politics" and "They were there," so they must be as morally guilty as the Panthers themselves. As a junior senator from Wisconsin once demonstrated, if you can't defeat your political opponents at the ballot box, and you can't point to anything specific they've done wrong, simply declare them guilty for once having been associated (no matter how tenuous the association) with a group now reviled. "Vilification by association" tactics that worked for McCarthyites in the 1950s apparently still have their adherents today.

Scream, America, when you've had enough.

Update: Versions of the e-mailed denunciation headed "Paul Harvey's 'The rest of the story'" began circulating on the Internet in June 2000. This header plus a comment at the end of the text ("And now, as Paul Harvey says, you know the rest of the story") caused some to believe Paul Harvey had read this piece (or a shorter version of it) on air. Paul Harvey's people confirm he has never broadcast the Panthers and Hillary Clinton story.

She was, by standards of those chaotic and violent times, a moderate voice compared with such fanatics as Yippie leader Jerry Rubin, who exhorted Yale students to "kill your parents," but she played a prominent activist role.

Yes, Hillary Rodham was a "campus leader" and played an "activist role" in her university days. So what? The same could be said of thousands of other people who protested the Vietnam War, or campaigned to get 18-year-olds the vote, or supported equal rights for women. None of that demonstrates anything about Hillary Rodham's alleged support of the Black Panthers. Elvin himself admits that she was "a moderate voice," and it's significant that he doesn't quote from, synopsize, or even identify by title any of the "reviewed biographies" he alludes to, because none of them supports the impression he's trying to create. Not a single one of these biographies quotes anyone who actually saw Hillary Rodham taking part in campus protests for the Panthers, but nearly all of them quote people who knew her back then as saying that radical protest politics simply weren't her style, and that she preferred getting two sides together for reconciliation rather than confrontation. For example, in The Seduction of Hillary Rodham Clinton by David Brock, we find:

. . . Hillary took her moral bearings from the radicals while favoring establishment tactics . . . This enabled her to work within the mainstream and to retain the respect and admiration of those in power. "She was always careful not to stray," said Robert Borosage. "For example, the yippies erected an air balloon tent on campus and lived in it. She wasn't a part of that. She probably had a sense that that was a politics that wouldn't work."

[. . .]

By the end of her first year at Yale, it was clear that Hillary abjured the in-your-face political tactics of Jerry Rubin as well as the exhibitionistic and hedonistic side of the 1960s. She was practical, pragmatic, and mainstream in her strategies, tactics, and presentation.

Stripped of all the invective and blatant political ranting, the case here against Mr. Lee and Ms. Clinton comes down to nothing more than "We don't like their politics" and "They were there," so they must be as morally guilty as the Panthers themselves. As a junior senator from Wisconsin once demonstrated, if you can't defeat your political opponents at the ballot box, and you can't point to anything specific they've done wrong, simply declare them guilty for once having been associated (no matter how tenuous the association) with a group now reviled. "Vilification by association" tactics that worked for McCarthyites in the 1950s apparently still have their adherents today.

Scream, America, when you've had enough.

Update: Versions of the e-mailed denunciation headed "Paul Harvey's 'The rest of the story'" began circulating on the Internet in June 2000. This header plus a comment at the end of the text ("And now, as Paul Harvey says, you know the rest of the story") caused some to believe Paul Harvey had read this piece (or a shorter version of it) on air. Paul Harvey's people confirm he has never broadcast the Panthers and Hillary Clinton story.

Are you talking about me, or Gray? At any rate, we've both been posting
in this newsgroup for years, and anyone who has been here for more than
a few months knows that it's kind of a free-for-all, and the charter makes
explicit mention of the fact that that is the character of this ng.

She stepped over the line when she posted my lycos.com address multiple
times, in an attempt to induce SPAM - something she expressly complained
about! - in my home mailbox for pointing out her flawed logic. She put the
nail
in the coffin when she mentioned my wife's name, as if that was some kind of
supersecret knowledge. She/It went to QRZ.com and looked up my information.
As a ham, that's public knowledge, so PMS Girl isn't exactly bright.

pulse, Pulse. PULSE !
{ thump-thump, Thump-Thump. THUMP-THUMP ! }

The Heart Beat of America [VOTERS] Has Spoken
{ The American Citizens Have Casted Their Votes. }

and "IF" You Can Not Hear It . . .

It is then 'clear' that You have No "Pulse" :o)
{ { { { { { The Sound of Silence } } } } } }

Maybe You should READ some of the Words from John 'ff' Kerry's
"Address to Supporters at Fanueil Hall" on the 3rd November 2004:
GoTo=> http://www.johnkerry.com/

"In America it is vital that every Vote Count, and that Every
Vote be Counted. But the Outcome should be Decided by Voters"

"Thanks to Democrats and Republicans and Independents who stood
with us, and Everyone Who Voted no matter who their candidate was."

"But in an American Election, there are no losers, because whether
or not our candidates are successful, the next morning we all wake
up as Americans. And that -- that is the greatest privilege and
the most remarkable good fortune that can come to us on earth.
With that gift also comes obligation. We are Required now to Work
Together for the Good of Our Country. In the days ahead, we must
find common cause. We must join in common effort without remorse
or recrimination, without anger or rancor. America is in need of
Unity and longing for a larger measure of Compassion."

"I pledge to do my part to try to bridge the partisan divide.
I know this is a difficult time for my supporters, but I ask them,
all of you, to join me in doing that."

"I'll never forget the wonderful people who came to our rallies,
who stood in our rope lines, who put their hopes in our hands,
who invested in each and every one of us. I saw in them the truth
that America is not only great, but it is good."

"So here -- so with a grateful heart -- I leave this campaign
with a prayer that has even greater meaning to me now that I've
come to know our vast country so much better. Thanks to all of
you and what a privilege it has been.
And that prayer is very simple: GOD BLESS AMERICA."

AGAIN REMEMBER: What John 'ff' Kerry Said In Closing
After Conceding the Election: "GOD BLESS AMERICA"

GoTo=> http://www.johnkerry.com/

| IS against her TOS, or maybe she does....

Well, you have a point, we don't know what her motivation is, but
she's apparently gone away. I'm not trying to shut anyone up, but
I make no excuses for taking care of my family. ;)

I guess that's the whole point - she ignores her ISP's TOS, then she
posts blatantly abusive posts - the very *same* behavior she was
jumping everyone else over. Methinks a frustrated, closeted lesbian
or gay male is afoot (snicker). Anyway, she thought she/he was
clever by looking up my callsign on QRZ.com - "no big whoop," as
Mike Meyers would say, and I've had time to think about it, and
realized it's pretty much a non - issue to me, as my amateur radio
callsign is public record.

Fish and chips (aka "fish supper" in Scotland) - hot, greasy, and definately fresh potatoes (not frozen), crisp batter on haddock. Salt and lots of vinegar. Topped with a generous splodge of "HP Brown Sauce". Sometimes a "side order" of mushy peas!

Based on a dare? Looking at haggis, you could be right!

Oh, and violently swinging back on-topic; the only shortwave stations transmitting from Scotland I know of have been Sunday-morning pirates eg. Radio Freedom International (have QSL). But I stand to be corrected.

As a matter of interest, does Minnesota currently have any shortwave transmissions?

|
| Thanks

G4FON for the code - free for download. Google it and
you'll find it.

I *highly* recommend the Icom IC-T2H 2 meter handheld.
I love mine! Unless you live in a big metro area (If you do,
you will want 2 meters and 70 cm on your HT). I got my
HT for 90 bucks, and get consistent *excellent* audio and
signal reports, because it puts out a full 5 watts. Get some
NiMH batteries at Sam's Club (the 2000+ maH rated ones),
and a charger, and you'll have a LONG lasting battery setup
to go with it, all still on the cheap.

Gundalf Grey can't or won't admit it, but *he* is the fascist. He is the one that wants elections to turn out only in his favor, regardless of what the majority want. Obviously it hasn't occured to him that in the US we choose leaders based on whom the majority want, and in a society where the majority wins, the minority losers have to either accept it and work with the system or go find somewhere else where the majority has no say and agrees with their ultra-liberal loonie philosophies and they get their way every time. I few middle eastern and oriental countries come to mind.

The majority of the voting citizens excersized their voting powers and soundly reject the simple minded dummycrat liberals and their non-values not only for the office of the President, but in Congess as well. The majority spoke and won, the minority lost. He should learn to deal with it, but doubt his simple dummycrat liberal mind can handle it.

Evidence Mounts That The Vote Was Hacked

by Thom Hartmann

When I spoke with Jeff Fisher this morning (Saturday, November 06, 2004), the Democratic candidate for the U.S. House of Representatives from Florida's 16th District said he was waiting for the FBI to show up.

Fisher has evidence, he says, not only that the Florida election was hacked, but of who hacked it and how.

And not just this year, he said, but that these same people had previously hacked the Democratic primary race in 2002 so that Jeb Bush would not have to run against Janet Reno, who presented a real threat to Jeb, but instead against Bill McBride, who Jeb beat.

"It was practice for a national effort," Fisher told me.

And evidence is accumulating that the national effort happened on November 2, 2004.

The State of Florida, for example, publishes a county-by-county record of votes cast and people registered to vote by party affiliation.

Net denizen Kathy Dopp compiled the official state information into a table, available at http://ustogether.org/Florida_Election.htm, and noticed something startling.

While the heavily scrutinized touch-screen voting machines seemed to produce results in which the registered Democrat/Republican ratios matched the Kerry/Bush vote, and so did the optically-scanned paper ballots in the larger counties, in Florida's smaller counties the results from the optically scanned paper ballots - fed into a central tabulator PC and thus vulnerable to hacking - seem to have been reversed.

In Baker County, for example, with 12,887 registered voters, 69.3% of them Democrats and 24.3% of them Republicans, the vote was only 2,180 for Kerry and 7,738 for Bush, the opposite of what is seen everywhere else in the country where registered Democrats largely voted for Kerry.

In Dixie County, with 4,988 registered voters, 77.5% of them Democrats and a mere 15% registered as Republicans, only 1,959 people voted for Kerry, but 4,433 voted for Bush.

The pattern repeats over and over again - but only in the smaller counties where, it was probably assumed, the small voter numbers wouldn't be much noticed.

Franklin County, 77.3% registered Democrats, went 58.5% for Bush.

Holmes County, 72.7% registered Democrats, went 77.25% for Bush.

Yet in the larger counties, where such anomalies would be more obvious to the news media, high percentages of registered Democrats equaled high percentages of votes for Kerry.

More visual analysis of the results can be seen at http://ustogether.org/election04/FloridaDataStats.htm, and www.rubberbug.com/temp/Florida2004chart.htm.

And, although elections officials didn't notice these anomalies, in aggregate they were enough to swing Florida from Kerry to Bush.

If you simply go through the analysis of these counties and reverse the "anomalous" numbers in those counties that appear to have been hacked, suddenly the Florida election results resemble the Florida exit poll results:

Kerry won, and won big.

Those exit poll results have been a problem for reporters ever since Election Day.

Election night, I'd been doing live election coverage for WDEV, one of the radio stations that carries my syndicated show, and, just after

midnight, during the 12:20 a.m. Associated Press Radio News feed, I was startled to hear the reporter detail how Karen Hughes had earlier sat George W. Bush down to inform him that he'd lost the election.

The exit polls were clear: Kerry was winning in a landslide.

"Bush took the news stoically," noted the AP report.

But then the computers reported something different.

In several pivotal states.

Conservatives see a conspiracy here: They think the exit polls were rigged.

Dick Morris, the infamous political consultant to the first Clinton campaign who became a Republican consultant and Fox News regular, wrote an article for The Hill, the publication read by every political junkie in Washington, DC, in which he made a couple of brilliant points.

"Exit Polls are almost never wrong," Morris wrote.

"They eliminate the two major potential fallacies in survey research by correctly separating actual voters from those who pretend they will cast ballots but never do and by substituting actual observation for guesswork in judging the relative turnout of different parts of the state."

He added:

"So, according to ABC-TVs exit polls, for example, Kerry was slated to carry Florida, Ohio, New Mexico, Colorado, Nevada, and Iowa, all of which Bush carried. The only swing state the network had going to Bush was West Virginia, which the president won by 10 points."

Yet a few hours after the exit polls were showing a clear Kerry sweep, as the computerized vote numbers began to come in from the various states the election was called for Bush.

How could this happen?

On the CNBC TV show "Topic A With Tina Brown," several months ago, Howard Dean had filled in for Tina Brown as guest host.

His guest was Bev Harris, the Seattle grandmother who started www.blackboxvoting.org from her living room.

Bev pointed out that regardless of how votes were tabulated (other than hand counts, only done in odd places like small towns in Vermont), the real "counting" is done by computers.

Be they Diebold Opti-Scan machines, which read paper ballots filled in by pencil or ink in the voter's hand, or the scanners that read punch cards, or the machines that simply record a touch of the screen, in

all cases the final tally is sent to a "central tabulator" machine.

That central tabulator computer is a Windows-based PC.

"In a voting system," Harris explained to Dean on national television, "you have all the different voting machines at all the different polling places, sometimes, as in a county like mine, there's a thousand polling places in a single county. All those machines feed into the one machine so it can add up all the votes. So, of course, if you were going to do something you shouldn't to a voting machine, would it be more convenient to do it to each of the 4000 machines, or just come in here and deal with all of them at once?"

Dean nodded in rhetorical agreement, and Harris continued.

"What surprises people is that the central tabulator is just a PC, like what you and I use. It's just a regular computer."

"So," Dean said, "anybody who can hack into a PC can hack into a central tabulator?"

Harris nodded affirmation, and pointed out how Diebold uses a program called GEMS, which fills the screen of the PC and effectively turns it into the central tabulator system.

"This is the official program that the County Supervisor sees," she said, pointing to a PC that was sitting between them loaded with Diebold's software.

Bev then had Dean open the GEMS program to see the results of a test election.

They went to the screen titled "Election Summary Report" and waited a moment while the PC "adds up all the votes from all the various precincts," and then saw that in this faux election Howard Dean had 1000 votes, Lex Luthor had 500, and Tiger Woods had none.

Dean was winning.

"Of course, you can't tamper with this software," Harris noted.

Diebold wrote a pretty good program.

But, it's running on a Windows PC.

So Harris had Dean close the Diebold GEMS software, go back to the normal Windows PC desktop, click on the "My Computer" icon, choose "Local Disk C:," open the folder titled GEMS, and open the sub-folder "LocalDB" which, Harris noted, "stands for local database, that's where they keep the votes."

Harris then had Dean double-click on a file in that folder titled "Central Tabulator Votes," which caused the PC to open the vote count in a database program like Excel.

In the "Sum of the Candidates" row of numbers, she found that in one precinct Dean had received 800 votes and Lex Luthor had gotten 400.

"Let's just flip those," Harris said, as Dean cut and pasted the numbers from one cell into the other.

"And," she added magnanimously, "let's give 100 votes to Tiger."

They closed the database, went back into the official GEMS software "the legitimate way, you're the county supervisor and you're checking on the progress of your election."

As the screen displayed the official voter tabulation, Harris said,

"And you can see now that Howard Dean has only 500 votes, Lex Luthor has 900, and Tiger Woods has 100."

Dean, the winner, was now the loser.

Harris sat up a bit straighter, smiled, and said, "We just edited an election, and it took us 90 seconds."

On live national television. (You can see the clip on www.votergate.tv.)

Which brings us back to Morris and those pesky exit polls that had Karen Hughes telling George W. Bush that he'd lost the election in a landslide.

Morris's conspiracy theory is that the exit polls "were sabotage" to cause people in the western states to not bother voting for Bush, since the networks would call the election based on the exit polls for Kerry.

But the networks didn't do that, and had never intended to.

It makes far more sense that the exit polls were right - they weren't done on Diebold PCs - and that the vote itself was hacked.

And not only for the presidential candidate - Jeff Fisher thinks this hit him and pretty much every other Democratic candidate for national office in the most-hacked swing states.

So far, the only national "mainstream" media to come close to this story was Keith Olbermann on his show Friday night, November 5th, when he noted that it was curious that all the voting machine irregularities so far uncovered seem to favor Bush.

In the meantime, the Washington Post and other media are now going through single-bullet-theory-like contortions to explain how the exit polls had failed.

But I agree with Fox's Dick Morris on this one, at least in large part.

Wrapping up his story for The Hill, Morris wrote in his final paragraph, "This was no mere mistake. Exit polls cannot be as wrong

across the board as they were on election night. I suspect foul play."

In several pivotal states.

Conservatives see a conspiracy here: They think the exit polls were rigged.

Dick Morris, the infamous political consultant to the first Clinton campaign who became a Republican consultant and Fox News regular, wrote an article for The Hill, the publication read by every political junkie in Washington, DC, in which he made a couple of brilliant points.

"Exit Polls are almost never wrong," Morris wrote.

"They eliminate the two major potential fallacies in survey research by correctly separating actual voters from those who pretend they will cast ballots but never do and by substituting actual observation for guesswork in judging the relative turnout of different parts of the state."

He added:

"So, according to ABC-TVs exit polls, for example, Kerry was slated to carry Florida, Ohio, New Mexico, Colorado, Nevada, and Iowa, all of which Bush carried. The only swing state the network had going to Bush was West Virginia, which the president won by 10 points."

Yet a few hours after the exit polls were showing a clear Kerry sweep, as the computerized vote numbers began to come in from the various states the election was called for Bush.

How could this happen?

On the CNBC TV show "Topic A With Tina Brown," several months ago, Howard Dean had filled in for Tina Brown as guest host.

His guest was Bev Harris, the Seattle grandmother who started www.blackboxvoting.org from her living room.

Bev pointed out that regardless of how votes were tabulated (other than hand counts, only done in odd places like small towns in Vermont), the real "counting" is done by computers.

Be they Diebold Opti-Scan machines, which read paper ballots filled in by pencil or ink in the voter's hand, or the scanners that read punch cards, or the machines that simply record a touch of the screen, in all cases the final tally is sent to a "central tabulator" machine.

That central tabulator computer is a Windows-based PC.

"In a voting system," Harris explained to Dean on national television, "you have all the different voting machines at all the different polling places, sometimes, as in a county like mine, there's a thousand polling places in a single county. All those machines feed into the one machine so it can add up all the votes. So, of course, if you were going to do something you shouldn't to a voting machine, would it be more convenient to do it to each of the 4000 machines, or just come in here and deal with all of them at once?"

Dean nodded in rhetorical agreement, and Harris continued.

"What surprises people is that the central tabulator is just a PC, like what you and I use. It's just a regular computer."

"So," Dean said, "anybody who can hack into a PC can hack into a central tabulator?"

Harris nodded affirmation, and pointed out how Diebold uses a program called GEMS, which fills the screen of the PC and effectively turns it into the central tabulator system.

"This is the official program that the County Supervisor sees," she said, pointing to a PC that was sitting between them loaded with Diebold's software.

Bev then had Dean open the GEMS program to see the results of a test election.

They went to the screen titled "Election Summary Report" and waited a moment while the PC "adds up all the votes from all the various precincts," and then saw that in this faux election Howard Dean had 1000 votes, Lex Luthor had 500, and Tiger Woods had none.

Dean was winning.

"Of course, you can't tamper with this software," Harris noted.

Diebold wrote a pretty good program.

But, it's running on a Windows PC.

So Harris had Dean close the Diebold GEMS software, go back to the normal Windows PC desktop, click on the "My Computer" icon, choose "Local Disk C:," open the folder titled GEMS, and open the sub-folder "LocalDB" which, Harris noted, "stands for local database, that's where they keep the votes."

Harris then had Dean double-click on a file in that folder titled "Central Tabulator Votes," which caused the PC to open the vote count in a database program like Excel.

In the "Sum of the Candidates" row of numbers, she found that in one precinct Dean had received 800 votes and Lex Luthor had gotten 400.

"Let's just flip those," Harris said, as Dean cut and pasted the numbers from one cell into the other.

"And," she added magnanimously, "let's give 100 votes to Tiger."

They closed the database, went back into the official GEMS software "the legitimate way, you're the county supervisor and you're checking on the progress of your election."

As the screen displayed the official voter tabulation, Harris said,

"And you can see now that Howard Dean has only 500 votes, Lex Luthor has 900, and Tiger Woods has 100."

Dean, the winner, was now the loser.

Harris sat up a bit straighter, smiled, and said, "We just edited an election, and it took us 90 seconds."

On live national television. (You can see the clip on www.votergate.tv.)

Which brings us back to Morris and those pesky exit polls that had Karen Hughes telling George W. Bush that he'd lost the election in a landslide.

Morris's conspiracy theory is that the exit polls "were sabotage" to cause people in the western states to not bother voting for Bush, since the networks would call the election based on the exit polls for Kerry.

But the networks didn't do that, and had never intended to.

It makes far more sense that the exit polls were right - they weren't done on Diebold PCs - and that the vote itself was hacked.

And not only for the presidential candidate - Jeff Fisher thinks this hit him and pretty much every other Democratic candidate for national office in the most-hacked swing states.

So far, the only national "mainstream" media to come close to this story was Keith Olbermann on his show Friday night, November 5th, when he noted that it was curious that all the voting machine irregularities so far uncovered seem to favor Bush.

In the meantime, the Washington Post and other media are now going through single-bullet-theory-like contortions to explain how the exit polls had failed.

But I agree with Fox's Dick Morris on this one, at least in large part.

Wrapping up his story for The Hill, Morris wrote in his final paragraph, "This was no mere mistake. Exit polls cannot be as wrong across the board as they were on election night. I suspect foul play."

Congrads on passing the test Jennie

Be sure you want an HT instead of a mobile.
A mobile can be easily removed from the car and used as base station (with an external power supply)

For $300 you can buy both an HT and a mobile and a power supply -- example HT - ICOM IC-T2H and an ICOM 2100H Mobile

Suggest you go to a local Radio Store in your area -- look at and try out the various HT's and mobiles and discuss them with the sales people.

Lots of HT Reviews are at URL:
http://www.eham.net/reviews/products/49

Lots of mobile reviews at URL:
http://www.eham.net/reviews/products/38

The best code practice program is the one that works for you.
Beware of advice that sez -- "this is the best one" as it might have been for the person who recommended same but just doesn't click with you.

For Morse trainer freebees and demos see URL:
http://ac6v.com/morseprograms.htm

For how to learn the code (varies with the individual) see URL:
http://ac6v.com/morseaids.htm#Learn

Two things that almost all will recommend is:
"Study EVERY day for 20 minutes to a half hour"

AND

"Whatever method you use, try to *hear* the code directly as a letter. IOW, don't try to translate the sound into dot-dash and translate that into A, just hear the dot-dash and think A. Easier said than done, but when you master it your receiving speed will increase dramatically."

The AVERAGE person needs about 30 hours of study and practice on the code to hit 5 wpm.

Good Luck

Evidence Mounts That The Vote Was Hacked

by Thom Hartmann

When I spoke with Jeff Fisher this morning (Saturday, November 06, 2004), the Democratic candidate for the U.S. House of Representatives from Florida's 16th District said he was waiting for the FBI to show up.

Fisher has evidence, he says, not only that the Florida election was hacked, but of who hacked it and how.

And not just this year, he said, but that these same people had previously hacked the Democratic primary race in 2002 so that Jeb Bush would not have to run against Janet Reno, who presented a real threat to Jeb, but instead against Bill McBride, who Jeb beat.

"It was practice for a national effort," Fisher told me.

And evidence is accumulating that the national effort happened on November 2, 2004.

The State of Florida, for example, publishes a county-by-county record of votes cast and people registered to vote by party affiliation.

Net denizen Kathy Dopp compiled the official state information into a table, available at http://ustogether.org/Florida_Election.htm, and noticed something startling.

While the heavily scrutinized touch-screen voting machines seemed to produce results in which the registered Democrat/Republican ratios matched the Kerry/Bush vote, and so did the optically-scanned paper ballots in the larger counties, in Florida's smaller counties the results from the optically scanned paper ballots - fed into a central tabulator PC and thus vulnerable to hacking - seem to have been reversed.

In Baker County, for example, with 12,887 registered voters, 69.3% of them Democrats and 24.3% of them Republicans, the vote was only 2,180 for Kerry and 7,738 for Bush, the opposite of what is seen everywhere else in the country where registered Democrats largely voted for Kerry.

In Dixie County, with 4,988 registered voters, 77.5% of them Democrats and a mere 15% registered as Republicans, only 1,959 people voted for Kerry, but 4,433 voted for Bush.

The pattern repeats over and over again - but only in the smaller counties where, it was probably assumed, the small voter numbers wouldn't be much noticed.

Franklin County, 77.3% registered Democrats, went 58.5% for Bush.

Holmes County, 72.7% registered Democrats, went 77.25% for Bush.

Yet in the larger counties, where such anomalies would be more obvious to the news media, high percentages of registered Democrats equaled high percentages of votes for Kerry.

More visual analysis of the results can be seen at http://ustogether.org/election04/FloridaDataStats.htm, and www.rubberbug.com/temp/Florida2004chart.htm.

And, although elections officials didn't notice these anomalies, in aggregate they were enough to swing Florida from Kerry to Bush.

If you simply go through the analysis of these counties and reverse the "anomalous" numbers in those counties that appear to have been hacked, suddenly the Florida election results resemble the Florida exit poll results:

Kerry won, and won big.

Those exit poll results have been a problem for reporters ever since Election Day.

Election night, I'd been doing live election coverage for WDEV, one of the radio stations that carries my syndicated show, and, just after midnight, during the 12:20 a.m. Associated Press Radio News feed, I was startled to hear the reporter detail how Karen Hughes had earlier sat George W. Bush down to inform him that he'd lost the election.

The exit polls were clear: Kerry was winning in a landslide.

"Bush took the news stoically," noted the AP report.

But then the computers reported something different.

In several pivotal states.

Conservatives see a conspiracy here: They think the exit polls were rigged.

Dick Morris, the infamous political consultant to the first Clinton campaign who became a Republican consultant and Fox News regular, wrote an article for The Hill, the publication read by every political junkie in Washington, DC, in which he made a couple of brilliant points.

"Exit Polls are almost never wrong," Morris wrote.

"They eliminate the two major potential fallacies in survey research by correctly separating actual voters from those who pretend they will cast ballots but never do and by substituting actual observation for guesswork in judging the relative turnout of different parts of the state."

He added:

"So, according to ABC-TVs exit polls, for example, Kerry was slated to carry Florida, Ohio, New Mexico, Colorado, Nevada, and Iowa, all of which Bush carried. The only swing state the network had going to Bush was West Virginia, which the president won by 10 points."

Yet a few hours after the exit polls were showing a clear Kerry sweep, as the computerized vote numbers began to come in from the various states the election was called for Bush.

How could this happen?

On the CNBC TV show "Topic A With Tina Brown," several months ago, Howard Dean had filled in for Tina Brown as guest host.

His guest was Bev Harris, the Seattle grandmother who started www.blackboxvoting.org from her living room.

Bev pointed out that regardless of how votes were tabulated (other than hand counts, only done in odd places like small towns in Vermont), the real "counting" is done by computers.

Be they Diebold Opti-Scan machines, which read paper ballots filled in by pencil or ink in the voter's hand, or the scanners that read punch cards, or the machines that simply record a touch of the screen, in all cases the final tally is sent to a "central tabulator" machine.

That central tabulator computer is a Windows-based PC.

"In a voting system," Harris explained to Dean on national television, "you have all the different voting machines at all the different polling places, sometimes, as in a county like mine, there's a thousand polling places in a single county. All those machines feed into the one machine so it can add up all the votes. So, of course, if

you were going to do something you shouldn't to a voting machine, would it be more convenient to do it to each of the 4000 machines, or just come in here and deal with all of them at once?"

Dean nodded in rhetorical agreement, and Harris continued.

"What surprises people is that the central tabulator is just a PC, like what you and I use. It's just a regular computer."

"So," Dean said, "anybody who can hack into a PC can hack into a central tabulator?"

Harris nodded affirmation, and pointed out how Diebold uses a program called GEMS, which fills the screen of the PC and effectively turns it into the central tabulator system.

"This is the official program that the County Supervisor sees," she said, pointing to a PC that was sitting between them loaded with Diebold's software.

Bev then had Dean open the GEMS program to see the results of a test election.

They went to the screen titled "Election Summary Report" and waited a moment while the PC "adds up all the votes from all the various precincts," and then saw that in this faux election Howard Dean had 1000 votes, Lex Luthor had 500, and Tiger Woods had none.

Unless you have a 1-radio "station" and no lightning protection of any kind, this is a very bad choice.

It is also an expensive undertaking, requiring both a dedicated power circuit *and* independent grounding. It's a favorite gimmick of audiophiles but with limited results unless you have noise problems that can't be corrected by repair or replacement of the offending emitters. While the audiophile can experiment like that to his heart's content, communication systems should *never* use independent grounds. That means everything in the shack. All of our grounding *must* be bonded, and that means either fixing or avoiding the use of noise emitters in the first place. For the computer, keep interconnecting data cables away from the coax feedlines, and place RF chokes on all power and data cables at both ends. That handles signal noise. The computer's casing provides all the shielding that device should ever need.

Jack

No, I'll leave that to fascist mentalities like your own. In my country we have something called dissent. We're Americans and we don't HAVE to LIKE IT.

_____-

This observer of this universe amazes me with his "right-on" assesment
of all things "political". Before the election he filled these
Newsgroups with deep insight. We all await more "fud".

There are still small groups of the "Flat Earth Society"...this
gentleman would qualify as a prime member. Sick sick...

If one differs with my liberal assessment of the Universe
he must be somewhat related to Nazism...such a hackneyed
trite cliche'...sicko stuff here folk. It won't float anymore

Leonard...

MII,

Why are you so down on a 'fellow' "Canadian" William Shatner ?

AKA: 'Captain James "T" Kirk' to Star Trekkies.
Who was born March 22 2233 (300 Years later to the Day) in
Riverside, Iowa on the 'United Planet' Earth.
http://www.startrek.com/startrek/view/series/TOS/character/1112496.html

NOTE: The "T" was for 'Tiberius'

Back-to-Reality: The Actor and Writer William Shatner was born
March 22, 1931 in Montreal, Quebec, Canada.
http://en.wikipedia.org/wiki/William_Shatner

I noticed that some are 2 Meter/440 MHz

Are those two ranges for technician too?

You're confusing whining, crying, etc. with rational discussion and debate. THis system of gov't would never have taken shape had the framers deteriorated in their deliberations to petty whining and complaining.

Evidence Mounts That The Vote Was Hacked

by Thom Hartmann

When I spoke with Jeff Fisher this morning (Saturday, November 06, 2004), the Democratic candidate for the U.S. House of Representatives from Florida's 16th District said he was waiting for the FBI to show up.

Fisher has evidence, he says, not only that the Florida election was hacked, but of who hacked it and how.

And not just this year, he said, but that these same people had previously hacked the Democratic primary race in 2002 so that Jeb Bush would not have to run against Janet Reno, who presented a real threat to Jeb, but instead against Bill McBride, who Jeb beat.

"It was practice for a national effort," Fisher told me.

And evidence is accumulating that the national effort happened on November 2, 2004.

The State of Florida, for example, publishes a county-by-county record of votes cast and people registered to vote by party affiliation.

Net denizen Kathy Dopp compiled the official state information into a table, available at http://ustogether.org/Florida_Election.htm, and noticed something startling.

While the heavily scrutinized touch-screen voting machines seemed to produce results in which the registered Democrat/Republican ratios matched the Kerry/Bush vote, and so did the optically-scanned paper ballots in the larger counties, in Florida's smaller counties the results from the optically scanned paper ballots - fed into a central tabulator PC and thus vulnerable to hacking - seem to have been reversed.

In Baker County, for example, with 12,887 registered voters, 69.3% of them Democrats and 24.3% of them Republicans, the vote was only 2,180 for Kerry and 7,738 for Bush, the opposite of what is seen everywhere else in the country where registered Democrats largely voted for Kerry.

In Dixie County, with 4,988 registered voters, 77.5% of them Democrats and a mere 15% registered as Republicans, only 1,959 people voted for Kerry, but 4,433 voted for Bush.

The pattern repeats over and over again - but only in the smaller counties where, it was probably assumed, the small voter numbers wouldn't be much noticed.

Franklin County, 77.3% registered Democrats, went 58.5% for Bush.

Holmes County, 72.7% registered Democrats, went 77.25% for Bush.

Yet in the larger counties, where such anomalies would be more obvious to the news media, high percentages of registered Democrats equaled high percentages of votes for Kerry.

More visual analysis of the results can be seen at http://ustogether.org/election04/FloridaDataStats.htm, and www.rubberbug.com/temp/Florida2004chart.htm.

And, although elections officials didn't notice these anomalies, in aggregate they were enough to swing Florida from Kerry to Bush.

If you simply go through the analysis of these counties and reverse the "anomalous" numbers in those counties that appear to have been hacked, suddenly the Florida election results resemble the Florida exit poll results:

Kerry won, and won big.

Those exit poll results have been a problem for reporters ever since Election Day.

Election night, I'd been doing live election coverage for WDEV, one of the radio stations that carries my syndicated show, and, just after midnight, during the 12:20 a.m. Associated Press Radio News feed, I was startled to hear the reporter detail how Karen Hughes had earlier sat George W. Bush down to inform him that he'd lost the election.

The exit polls were clear: Kerry was winning in a landslide.

"Bush took the news stoically," noted the AP report.

But then the computers reported something different.

In several pivotal states.

Conservatives see a conspiracy here: They think the exit polls were rigged.

Dick Morris, the infamous political consultant to the first Clinton campaign who became a Republican consultant and Fox News regular, wrote an article for The Hill, the publication read by every political junkie in Washington, DC, in which he made a couple of brilliant points.

"Exit Polls are almost never wrong," Morris wrote.

"They eliminate the two major potential fallacies in survey research by correctly separating actual voters from those who pretend they will cast ballots but never do and by substituting actual observation for guesswork in judging the relative turnout of different parts of the state."

He added:

"So, according to ABC-TVs exit polls, for example, Kerry was slated to carry Florida, Ohio, New Mexico, Colorado, Nevada, and Iowa, all of which Bush carried. The only swing state the network had going to Bush was West Virginia, which the president won by 10 points."

Yet a few hours after the exit polls were showing a clear Kerry sweep, as the computerized vote numbers began to come in from the various states the election was called for Bush.

How could this happen?

On the CNBC TV show "Topic A With Tina Brown," several months ago, Howard Dean had filled in for Tina Brown as guest host.

His guest was Bev Harris, the Seattle grandmother who started www.blackboxvoting.org from her living room.

Bev pointed out that regardless of how votes were tabulated (other than hand counts, only done in odd places like small towns in Vermont), the real "counting" is done by computers.

Be they Diebold Opti-Scan machines, which read paper ballots filled in by pencil or ink in the voter's hand, or the scanners that read punch cards, or the machines that simply record a touch of the screen, in all cases the final tally is sent to a "central tabulator" machine.

That central tabulator computer is a Windows-based PC.

"In a voting system," Harris explained to Dean on national television, "you have all the different voting machines at all the different polling places, sometimes, as in a county like mine, there's a thousand polling places in a single county. All those machines feed into the one machine so it can add up all the votes. So, of course, if you were going to do something you shouldn't to a voting machine, would it be more convenient to do it to each of the 4000 machines, or just come in here and deal with all of them at once?"

Dean nodded in rhetorical agreement, and Harris continued.

"What surprises people is that the central tabulator is just a PC, like what you and I use. It's just a regular computer."

"So," Dean said, "anybody who can hack into a PC can hack into a central tabulator?"

Harris nodded affirmation, and pointed out how Diebold uses a program called GEMS, which fills the screen of the PC and effectively turns it into the central tabulator system.

"This is the official program that the County Supervisor sees," she said, pointing to a PC that was sitting between them loaded with Diebold's software.

Bev then had Dean open the GEMS program to see the results of a test election.

They went to the screen titled "Election Summary Report" and waited a moment while the PC "adds up all the votes from all the various precincts," and then saw that in this faux election Howard Dean had 1000 votes, Lex Luthor had 500, and Tiger Woods had none.

Dean was winning.

"Of course, you can't tamper with this software," Harris noted.

Diebold wrote a pretty good program.

But, it's running on a Windows PC.

So Harris had Dean close the Diebold GEMS software, go back to the normal Windows PC desktop, click on the "My Computer" icon, choose "Local Disk C:," open the folder titled GEMS, and open the sub-folder "LocalDB" which, Harris noted, "stands for local database, that's where they keep the votes."

Harris then had Dean double-click on a file in that folder titled "Central Tabulator Votes," which caused the PC to open the vote count in a database program like Excel.

In the "Sum of the Candidates" row of numbers, she found that in one precinct Dean had received 800 votes and Lex Luthor had gotten 400.

"Let's just flip those," Harris said, as Dean cut and pasted the numbers from one cell into the other.

"And," she added magnanimously, "let's give 100 votes to Tiger."

They closed the database, went back into the official GEMS software "the legitimate way, you're the county supervisor and you're checking on the progress of your election."

As the screen displayed the official voter tabulation, Harris said,

"And you can see now that Howard Dean has only 500 votes, Lex Luthor has 900, and Tiger Woods has 100."

Dean, the winner, was now the loser.

Harris sat up a bit straighter, smiled, and said, "We just edited an election, and it took us 90 seconds."

On live national television. (You can see the clip on www.votergate.tv.)

Which brings us back to Morris and those pesky exit polls that had Karen Hughes telling George W. Bush that he'd lost the election in a

landslide.

Morris's conspiracy theory is that the exit polls "were sabotage" to cause people in the western states to not bother voting for Bush, since the networks would call the election based on the exit polls for Kerry.

But the networks didn't do that, and had never intended to.

It makes far more sense that the exit polls were right - they weren't done on Diebold PCs - and that the vote itself was hacked.

And not only for the presidential candidate - Jeff Fisher thinks this hit him and pretty much every other Democratic candidate for national office in the most-hacked swing states.

So far, the only national "mainstream" media to come close to this story was Keith Olbermann on his show Friday night, November 5th, when he noted that it was curious that all the voting machine irregularities so far uncovered seem to favor Bush.

In the meantime, the Washington Post and other media are now going through single-bullet-theory-like contortions to explain how the exit polls had failed.

But I agree with Fox's Dick Morris on this one, at least in large part.

Wrapping up his story for The Hill, Morris wrote in his final paragraph, "This was no mere mistake. Exit polls cannot be as wrong across the board as they were on election night. I suspect foul play."

MMMFGKTDA,

So... How does that 'compare' with the "Realities" of the Real World ?

* Where 10% of the Population of Capitalist America (USofA)
lives at the so called 'poverty level' ?

* Where 90% of the Population of Communist China (PRC)
lives in "Real" Poverty ?

one wonders ~ RHF

No. We don't have to do that either. The corrupt machine politics of the Boss Tweed era ended because more and more citizens DIDN'T accept the results of democrat-machine elections.

That's what's going to happen this time too, fascist. Only this time it's the right wing that's gaming the system. And every legal means of opposition to every single move of the right wing is exactly what's going to bring your behemoth down.

Jennie,
First off, congratulations!

You might want to see if there are many 220 MHz repeaters in your area - if so I recommend the Kenwood TH-F6 as it has 2 meters, 220 and 440. Not as 'bullet proof' regarding intermod as some dual band radio's I've had but that is also due to it's wideband receive (100 KHz to 1.3 GHz).

As to dual-band radios I've had decent luck with a Yaesu FT-50, it has been dropped on hard surfaces (not intentially) bounced around in a backpack and even rained on and it still works. I've not used Icom HT's but have an R2 scanner and R75 receiver and am pleased with their performance as well. Each of the "Big 3" (Icom, Kenwood, Yaesu) have their own scheme for operating controls - as well as champions & detractors. If you can shop locally then do so as it will give you a chance to play around with the various manufacturer's models and allow you to decide which one 'feels best' in your hand - and don't forget to ask to see the manual to figure out which one's operating scheme and instructions are easiest to deal with.

My advice follow's Steve's regarding batteries - don't spend money on an extra NiMH battery, check which ones take an "AA" pack and also check the instructions for how much power is available on that pack. For instance, the Yaesu FT-50 puts out 2 - 21/2 watts on teh "AA" pack whereas the Kenwood TH-F6 only puts out 1/2 watt.

Again, congratulations & enjoy the hobby,
Howard

And even with that enormous number, he snuck in with the slimmest margin
since Wilson.

Deal with it, fascist.

Evidence Mounts That The Vote Was Hacked

by Thom Hartmann

When I spoke with Jeff Fisher this morning (Saturday, November 06, 2004), the Democratic candidate for the U.S. House of Representatives from Florida's 16th District said he was waiting for the FBI to show up.

Fisher has evidence, he says, not only that the Florida election was hacked, but of who hacked it and how.

And not just this year, he said, but that these same people had previously hacked the Democratic primary race in 2002 so that Jeb Bush would not have to run against Janet Reno, who presented a real threat to Jeb, but instead against Bill McBride, who Jeb beat.

"It was practice for a national effort," Fisher told me.

And evidence is accumulating that the national effort happened on November 2, 2004.

The State of Florida, for example, publishes a county-by-county record of votes cast and people registered to vote by party affiliation.

Net denizen Kathy Dopp compiled the official state information into a table, available at http://ustogether.org/Florida_Election.htm, and noticed something startling.

While the heavily scrutinized touch-screen voting machines seemed to produce results in which the registered Democrat/Republican ratios matched the Kerry/Bush vote, and so did the optically-scanned paper ballots in the larger counties, in Florida's smaller counties the results from the optically scanned paper ballots - fed into a central tabulator PC and thus vulnerable to hacking - seem to have been reversed.

In Baker County, for example, with 12,887 registered voters, 69.3% of them Democrats and 24.3% of them Republicans, the vote was only 2,180 for Kerry and 7,738 for Bush, the opposite of what is seen everywhere else in the country where registered Democrats largely voted for Kerry.

In Dixie County, with 4,988 registered voters, 77.5% of them Democrats and a mere 15% registered as Republicans, only 1,959 people voted for Kerry, but 4,433 voted for Bush.

The pattern repeats over and over again - but only in the smaller counties where, it was probably assumed, the small voter numbers wouldn't be much noticed.

Franklin County, 77.3% registered Democrats, went 58.5% for Bush.

Holmes County, 72.7% registered Democrats, went 77.25% for Bush.

Yet in the larger counties, where such anomalies would be more obvious to the news media, high percentages of registered Democrats equaled high percentages of votes for Kerry.

More visual analysis of the results can be seen at http://ustogether.org/election04/FloridaDataStats.htm, and www.rubberbug.com/temp/Florida2004chart.htm.

And, although elections officials didn't notice these anomalies, in aggregate they were enough to swing Florida from Kerry to Bush.

If you simply go through the analysis of these counties and reverse the "anomalous" numbers in those counties that appear to have been hacked, suddenly the Florida election results resemble the Florida exit poll results:

Kerry won, and won big.

Those exit poll results have been a problem for reporters ever since Election Day.

Election night, I'd been doing live election coverage for WDEV, one of the radio stations that carries my syndicated show, and, just after midnight, during the 12:20 a.m. Associated Press Radio News feed, I was startled to hear the reporter detail how Karen Hughes had earlier sat George W. Bush down to inform him that he'd lost the election.

The exit polls were clear: Kerry was winning in a landslide.

"Bush took the news stoically," noted the AP report.

But then the computers reported something different.

In several pivotal states.

Conservatives see a conspiracy here: They think the exit polls were rigged.

Dick Morris, the infamous political consultant to the first Clinton campaign who became a Republican consultant and Fox News regular, wrote an article for The Hill, the publication read by every political junkie in Washington, DC, in which he made a couple of brilliant points.

"Exit Polls are almost never wrong," Morris wrote.

"They eliminate the two major potential fallacies in survey research by correctly separating actual voters from those who pretend they will cast ballots but never do and by substituting actual observation for guesswork in judging the relative turnout of different parts of the state."

He added:

"So, according to ABC-TVs exit polls, for example, Kerry was slated to carry Florida, Ohio, New Mexico, Colorado, Nevada, and Iowa, all of which Bush carried. The only swing state the network had going to Bush was West Virginia, which the president won by 10 points."

Yet a few hours after the exit polls were showing a clear Kerry sweep, as the computerized vote numbers began to come in from the various states the election was called for Bush.

How could this happen?

On the CNBC TV show "Topic A With Tina Brown," several months ago, Howard Dean had filled in for Tina Brown as guest host.

His guest was Bev Harris, the Seattle grandmother who started www.blackboxvoting.org from her living room.

Bev pointed out that regardless of how votes were tabulated (other than hand counts, only done in odd places like small towns in Vermont), the real "counting" is done by computers.

Be they Diebold Opti-Scan machines, which read paper ballots filled in by pencil or ink in the voter's hand, or the scanners that read punch cards, or the machines that simply record a touch of the screen, in all cases the final tally is sent to a "central tabulator" machine.

That central tabulator computer is a Windows-based PC.

"In a voting system," Harris explained to Dean on national television, "you have all the different voting machines at all the different polling places, sometimes, as in a county like mine, there's a thousand polling places in a single county. All those machines feed into the one machine so it can add up all the votes. So, of course, if you were going to do something you shouldn't to a voting machine, would it be more convenient to do it to each of the 4000 machines, or just come in here and deal with all of them at once?"

Dean nodded in rhetorical agreement, and Harris continued.

"What surprises people is that the central tabulator is just a PC, like what you and I use. It's just a regular computer."

"So," Dean said, "anybody who can hack into a PC can hack into a central tabulator?"

Harris nodded affirmation, and pointed out how Diebold uses a program called GEMS, which fills the screen of the PC and effectively turns it into the central tabulator system.

"This is the official program that the County Supervisor sees," she said, pointing to a PC that was sitting between them loaded with Diebold's software.

Bev then had Dean open the GEMS program to see the results of a test election.

They went to the screen titled "Election Summary Report" and waited a moment while the PC "adds up all the votes from all the various precincts," and then saw that in this faux election Howard Dean had 1000 votes, Lex Luthor had 500, and Tiger Woods had none.

Dean was winning.

"Of course, you can't tamper with this software," Harris noted.

Diebold wrote a pretty good program.

But, it's running on a Windows PC.

So Harris had Dean close the Diebold GEMS software, go back to the normal Windows PC desktop, click on the "My Computer" icon, choose "Local Disk C:," open the folder titled GEMS, and open the sub-folder "LocalDB" which, Harris noted, "stands for local database, that's where they keep the votes."

Harris then had Dean double-click on a file in that folder titled "Central Tabulator Votes," which caused the PC to open the vote count in a database program like Excel.

In the "Sum of the Candidates" row of numbers, she found that in one precinct Dean had received 800 votes and Lex Luthor had gotten 400.

"Let's just flip those," Harris said, as Dean cut and pasted the numbers from one cell into the other.

"And," she added magnanimously, "let's give 100 votes to Tiger."

They closed the database, went back into the official GEMS software "the legitimate way, you're the county supervisor and you're checking on the progress of your election."

As the screen displayed the official voter tabulation, Harris said,

"And you can see now that Howard Dean has only 500 votes, Lex Luthor has 900, and Tiger Woods has 100."

Dean, the winner, was now the loser.

Harris sat up a bit straighter, smiled, and said, "We just edited an election, and it took us 90 seconds."

On live national television. (You can see the clip on www.votergate.tv.)

Which brings us back to Morris and those pesky exit polls that had Karen Hughes telling George W. Bush that he'd lost the election in a

landslide.

Morris's conspiracy theory is that the exit polls "were sabotage" to cause people in the western states to not bother voting for Bush, since the networks would call the election based on the exit polls for Kerry.

But the networks didn't do that, and had never intended to.

It makes far more sense that the exit polls were right - they weren't done on Diebold PCs - and that the vote itself was hacked.

And not only for the presidential candidate - Jeff Fisher thinks this hit him and pretty much every other Democratic candidate for national office in the most-hacked swing states.

So far, the only national "mainstream" media to come close to this story was Keith Olbermann on his show Friday night, November 5th, when he noted that it was curious that all the voting machine irregularities so far uncovered seem to favor Bush.

In the meantime, the Washington Post and other media are now going through single-bullet-theory-like contortions to explain how the exit polls had failed.

But I agree with Fox's Dick Morris on this one, at least in large part.

Wrapping up his story for The Hill, Morris wrote in his final paragraph, "This was no mere mistake. Exit polls cannot be as wrong across the board as they were on election night. I suspect foul play."

Evidence Mounts That The Vote Was Hacked

by Thom Hartmann

When I spoke with Jeff Fisher this morning (Saturday, November 06, 2004), the Democratic candidate for the U.S. House of Representatives from Florida's 16th District said he was waiting for the FBI to show up.

Fisher has evidence, he says, not only that the Florida election was hacked, but of who hacked it and how.

And not just this year, he said, but that these same people had previously hacked the Democratic primary race in 2002 so that Jeb Bush would not have to run against Janet Reno, who presented a real threat to Jeb, but instead against Bill McBride, who Jeb beat.

"It was practice for a national effort," Fisher told me.

And evidence is accumulating that the national effort happened on November 2, 2004.

The State of Florida, for example, publishes a county-by-county record of votes cast and people registered to vote by party affiliation.

Net denizen Kathy Dopp compiled the official state information into a table, available at http://ustogether.org/Florida_Election.htm, and noticed something startling.

While the heavily scrutinized touch-screen voting machines seemed to produce results in which the registered Democrat/Republican ratios matched the Kerry/Bush vote, and so did the optically-scanned paper ballots in the larger counties, in Florida's smaller counties the results from the optically scanned paper ballots - fed into a central tabulator PC and thus vulnerable to hacking - seem to have been reversed.

In Baker County, for example, with 12,887 registered voters, 69.3% of them Democrats and 24.3% of them Republicans, the vote was only 2,180 for Kerry and 7,738 for Bush, the opposite of what is seen everywhere else in the country where registered Democrats largely voted for Kerry.

In Dixie County, with 4,988 registered voters, 77.5% of them Democrats and a mere 15% registered as Republicans, only 1,959 people voted for Kerry, but 4,433 voted for Bush.

The pattern repeats over and over again - but only in the smaller counties where, it was probably assumed, the small voter numbers wouldn't be much noticed.

Franklin County, 77.3% registered Democrats, went 58.5% for Bush.

Holmes County, 72.7% registered Democrats, went 77.25% for Bush.

Yet in the larger counties, where such anomalies would be more obvious to the news media, high percentages of registered Democrats equaled high percentages of votes for Kerry.

More visual analysis of the results can be seen at http://ustogether.org/election04/FloridaDataStats.htm, and www.rubberbug.com/temp/Florida2004chart.htm.

And, although elections officials didn't notice these anomalies, in aggregate they were enough to swing Florida from Kerry to Bush.

If you simply go through the analysis of these counties and reverse the "anomalous" numbers in those counties that appear to have been hacked, suddenly the Florida election results resemble the Florida exit poll results:

Kerry won, and won big.

Those exit poll results have been a problem for reporters ever since Election Day.

Election night, I'd been doing live election coverage for WDEV, one of the radio stations that carries my syndicated show, and, just after midnight, during the 12:20 a.m. Associated Press Radio News feed, I was startled to hear the reporter detail how Karen Hughes had earlier sat George W. Bush down to inform him that he'd lost the election.

The exit polls were clear: Kerry was winning in a landslide.

"Bush took the news stoically," noted the AP report.

But then the computers reported something different.

In several pivotal states.

Conservatives see a conspiracy here: They think the exit polls were rigged.

Dick Morris, the infamous political consultant to the first Clinton campaign who became a Republican consultant and Fox News regular, wrote an article for The Hill, the publication read by every political junkie in Washington, DC, in which he made a couple of brilliant points.

"Exit Polls are almost never wrong," Morris wrote.

"They eliminate the two major potential fallacies in survey research by correctly separating actual voters from those who pretend they will cast ballots but never do and by substituting actual observation for guesswork in judging the relative turnout of different parts of the state."

He added:

"So, according to ABC-TVs exit polls, for example, Kerry was slated to carry Florida, Ohio, New Mexico, Colorado, Nevada, and Iowa, all of which Bush carried. The only swing state the network had going to Bush was West Virginia, which the president won by 10 points."

Yet a few hours after the exit polls were showing a clear Kerry sweep, as the computerized vote numbers began to come in from the various states the election was called for Bush.

How could this happen?

On the CNBC TV show "Topic A With Tina Brown," several months ago, Howard Dean had filled in for Tina Brown as guest host.

His guest was Bev Harris, the Seattle grandmother who started www.blackboxvoting.org from her living room.

Bev pointed out that regardless of how votes were tabulated (other than hand counts, only done in odd places like small towns in Vermont), the real "counting" is done by computers.

Be they Diebold Opti-Scan machines, which read paper ballots filled in by pencil or ink in the voter's hand, or the scanners that read punch cards, or the machines that simply record a touch of the screen, in all cases the final tally is sent to a "central tabulator" machine.

That central tabulator computer is a Windows-based PC.

"In a voting system," Harris explained to Dean on national television, "you have all the different voting machines at all the different polling places, sometimes, as in a county like mine, there's a thousand polling places in a single county. All those machines feed into the one machine so it can add up all the votes. So, of course, if you were going to do something you shouldn't to a voting machine, would it be more convenient to do it to each of the 4000 machines, or just come in here and deal with all of them at once?"

Dean nodded in rhetorical agreement, and Harris continued.

"What surprises people is that the central tabulator is just a PC, like what you and I use. It's just a regular computer."

"So," Dean said, "anybody who can hack into a PC can hack into a central tabulator?"

Harris nodded affirmation, and pointed out how Diebold uses a program called GEMS, which fills the screen of the PC and effectively turns it into the central tabulator system.

"This is the official program that the County Supervisor sees," she said, pointing to a PC that was sitting between them loaded with Diebold's software.

Bev then had Dean open the GEMS program to see the results of a test election.

They went to the screen titled "Election Summary Report" and waited a moment while the PC "adds up all the votes from all the various precincts," and then saw that in this faux election Howard Dean had 1000 votes, Lex Luthor had 500, and Tiger Woods had none.

Dean was winning.

"Of course, you can't tamper with this software," Harris noted.

Diebold wrote a pretty good program.

But, it's running on a Windows PC.

So Harris had Dean close the Diebold GEMS software, go back to the normal Windows PC desktop, click on the "My Computer" icon, choose "Local Disk C:," open the folder titled GEMS, and open the sub-folder "LocalDB" which, Harris noted, "stands for local database, that's where they keep the votes."

Harris then had Dean double-click on a file in that folder titled "Central Tabulator Votes," which caused the PC to open the vote count in a database program like Excel.

In the "Sum of the Candidates" row of numbers, she found that in one precinct Dean had received 800 votes and Lex Luthor had gotten 400.

"Let's just flip those," Harris said, as Dean cut and pasted the numbers from one cell into the other.

"And," she added magnanimously, "let's give 100 votes to Tiger."

They closed the database, went back into the official GEMS software "the legitimate way, you're the county supervisor and you're checking on the progress of your election."

As the screen displayed the official voter tabulation, Harris said,

"And you can see now that Howard Dean has only 500 votes, Lex Luthor has 900, and Tiger Woods has 100."

Dean, the winner, was now the loser.

Harris sat up a bit straighter, smiled, and said, "We just edited an election, and it took us 90 seconds."

On live national television. (You can see the clip on www.votergate.tv.)

Which brings us back to Morris and those pesky exit polls that had Karen Hughes telling George W. Bush that he'd lost the election in a

landslide.

Morris's conspiracy theory is that the exit polls "were sabotage" to cause people in the western states to not bother voting for Bush, since the networks would call the election based on the exit polls for Kerry.

But the networks didn't do that, and had never intended to.

The EIBI logs (http://www.eibi.de.vu/) are as good as anything, and better than most. Aside from them, ILG is still probably the best second choice - all the others come off the presses noticeably innaccurate, or are updated too seldom.

Some DX'ers publish on the web very extensive logs for a perticular section of the band (like tropicals) that are even more in depth - that takes some hunting around, though.

Tony

Jennie -- from the ARRL site URL:
http://www.arrl.org/FandES/field/regulations/allocate.html

Techs have all of the following privileges:

6 Meters

All Amateurs except Novices:
50.0-50.1 MHz: CW Only
50.1-54.0 MHz: CW, Phone, Image, MCW, RTTY/Data

2 Meters

All Amateurs except Novices:
144.0-144.1 MHz: CW Only
144.1-148.0 MHz: CW, Phone, Image, MCW, RTTY/Data

1.25 Meters
The FCC has allocated 219-220 MHz to amateur use on a secondary basis. This allocation is only for fixed digital message forwarding systems operated by all licensees except Novices. Amateur operations must not cause interference to, and must accept interference from, primary services in this and adjacent bands. Amateur stations are limited to 50 W PEP output and 100 kHz bandwidth. Automated Maritime Telecommunications Systems (AMTS) stations are the primary occupants in this band. Amateur stations within 398 miles of an AMTS station must notify the station in writing at least 30 days prior to beginning operations. Amateur stations within 50 miles of an AMTS station must get permission in writing from the AMTS station before beginning operations. ARRL Headquarters maintains a database of AMTS stations. The FCC requires that amateur operators provide written notification including the station's geographic location to the ARRL for inclusion in a database at least 30 days before beginning operations. See Section 97.303(e) of the FCC Rules.

Novice (Novices are limited to 25 watts PEP output), Technician,
Technician Plus, General, Advanced, Amateur Extra classes:
222.00-225.00 MHz: CW, Phone, Image, MCW, RTTY/Data
70 Centimeters

All Amateurs except Novices:
420.0-450.0 MHz: CW, Phone, Image, MCW, RTTY/Data
33 Centimeters

All Amateurs except Novices:
902.0-928.0 MHz: CW, Phone, Image, MCW, RTTY/Data
23 Centimeters

Novice class:
1270-1295 MHz: CW, phone, Image, MCW, RTTY/Data (maximum power, 5 watts
PEP)

All Amateurs except Novices:
1240-1300 MHz: CW, Phone, Image, MCW, RTTY/Data
Higher Frequencies:

All modes and licensees (except Novices) are authorized on the following
bands [FCC Rules, Part 97.301(a)]:

2300-2310 MHz
2390-2450 MHz
3300-3500 MHz
5650-5925 MHz
10.0-10.5 GHz
24.0-24.25 GHz
47.0-47.2 GHz
75.5-81.0 GHz*
119.98-120.02 GHz
142-149 GHz
241-250 GHz
All above 300 GHz
2M that is 144 to 148 MHz is the mostly commonly used followed by 440 MHz
band (70cm)
In a nutshell -- all authorized frequencies from 50 MHz (6M) and up

That bandplan is outdated. There is no longer a novice class, all novices
were upgraded to technicians. Techs have all priveledges above 50 MHz.

I'm not sure how all that works out though, as the FCC still lists the Novice Class license, see:

http://www.arrl.org/fcc/stats.html

Data as of 5 November.

I seem to remember the castaways doing something to recharge the batteries.
Didn't the professor have something where they used coconuts or something?

And you're assumption that they were thousands of miles away might not be
right. Look at the evidence:

-- they had a plain, vanilla AM radio
-- stations came in clear as a bell

Maybe they were only stranded 50 or 100 miles away from Oahu!

You are right. I had always assumed that novices became technicians. But
actually tech plusses before 1987 became generals. I found this
http://www.arrl.org/news/restructuring/faq.html about the restructuring.

Evidence Mounts That The Vote Was Hacked

by Thom Hartmann

When I spoke with Jeff Fisher this morning (Saturday, November 06, 2004), the Democratic candidate for the U.S. House of Representatives from Florida's 16th District said he was waiting for the FBI to show up.

Fisher has evidence, he says, not only that the Florida election was hacked, but of who hacked it and how.

And not just this year, he said, but that these same people had previously hacked the Democratic primary race in 2002 so that Jeb Bush would not have to run against Janet Reno, who presented a real threat to Jeb, but instead against Bill McBride, who Jeb beat.

"It was practice for a national effort," Fisher told me.

And evidence is accumulating that the national effort happened on November 2, 2004.

The State of Florida, for example, publishes a county-by-county record of votes cast and people registered to vote by party affiliation.

Net denizen Kathy Dopp compiled the official state information into a table, available at http://ustogether.org/Florida_Election.htm, and noticed something startling.

While the heavily scrutinized touch-screen voting machines seemed to produce results in which the registered Democrat/Republican ratios matched the Kerry/Bush vote, and so did the optically-scanned paper ballots in the larger counties, in Florida's smaller counties the results from the optically scanned paper ballots - fed into a central tabulator PC and thus vulnerable to hacking - seem to have been reversed.

In Baker County, for example, with 12,887 registered voters, 69.3% of them Democrats and 24.3% of them Republicans, the vote was only 2,180 for Kerry and 7,738 for Bush, the opposite of what is seen everywhere else in the country where registered Democrats largely voted for Kerry.

In Dixie County, with 4,988 registered voters, 77.5% of them Democrats and a mere 15% registered as Republicans, only 1,959 people voted for Kerry, but 4,433 voted for Bush.

The pattern repeats over and over again - but only in the smaller counties where, it was probably assumed, the small voter numbers wouldn't be much noticed.

Franklin County, 77.3% registered Democrats, went 58.5% for Bush.

Holmes County, 72.7% registered Democrats, went 77.25% for Bush.

Yet in the larger counties, where such anomalies would be more obvious to the news media, high percentages of registered Democrats equaled high percentages of votes for Kerry.

More visual analysis of the results can be seen at http://ustogether.org/election04/FloridaDataStats.htm, and www.rubberbug.com/temp/Florida2004chart.htm.

And, although elections officials didn't notice these anomalies, in aggregate they were enough to swing Florida from Kerry to Bush.

If you simply go through the analysis of these counties and reverse the "anomalous" numbers in those counties that appear to have been hacked, suddenly the Florida election results resemble the Florida exit poll results:

Kerry won, and won big.

Those exit poll results have been a problem for reporters ever since Election Day.

Election night, I'd been doing live election coverage for WDEV, one of the radio stations that carries my syndicated show, and, just after midnight, during the 12:20 a.m. Associated Press Radio News feed, I was startled to hear the reporter detail how Karen Hughes had earlier sat George W. Bush down to inform him that he'd lost the election.

The exit polls were clear: Kerry was winning in a landslide.

"Bush took the news stoically," noted the AP report.

But then the computers reported something different.

In several pivotal states.

Conservatives see a conspiracy here: They think the exit polls were rigged.

Dick Morris, the infamous political consultant to the first Clinton campaign who became a Republican consultant and Fox News regular, wrote an article for The Hill, the publication read by every political junkie in Washington, DC, in which he made a couple of brilliant points.

"Exit Polls are almost never wrong," Morris wrote.

"They eliminate the two major potential fallacies in survey research by correctly separating actual voters from those who pretend they will cast ballots but never do and by substituting actual observation for guesswork in judging the relative turnout of different parts of the state."

He added:

"So, according to ABC-TVs exit polls, for example, Kerry was slated to carry Florida, Ohio, New Mexico, Colorado, Nevada, and Iowa, all of which Bush carried. The only swing state the network had going to Bush was West Virginia, which the president won by 10 points."

Yet a few hours after the exit polls were showing a clear Kerry sweep, as the computerized vote numbers began to come in from the various states the election was called for Bush.

How could this happen?

On the CNBC TV show "Topic A With Tina Brown," several months ago, Howard Dean had filled in for Tina Brown as guest host.

His guest was Bev Harris, the Seattle grandmother who started www.blackboxvoting.org from her living room.

Bev pointed out that regardless of how votes were tabulated (other than hand counts, only done in odd places like small towns in Vermont), the real "counting" is done by computers.

Be they Diebold Opti-Scan machines, which read paper ballots filled in by pencil or ink in the voter's hand, or the scanners that read punch cards, or the machines that simply record a touch of the screen, in all cases the final tally is sent to a "central tabulator" machine.

That central tabulator computer is a Windows-based PC.

"In a voting system," Harris explained to Dean on national television, "you have all the different voting machines at all the different polling places, sometimes, as in a county like mine, there's a thousand polling places in a single county. All those machines feed into the one machine so it can add up all the votes. So, of course, if you were going to do something you shouldn't to a voting machine, would it be more convenient to do it to each of the 4000 machines, or just come in here and deal with all of them at once?"

Dean nodded in rhetorical agreement, and Harris continued.

"What surprises people is that the central tabulator is just a PC, like what you and I use. It's just a regular computer."

"So," Dean said, "anybody who can hack into a PC can hack into a central tabulator?"

Harris nodded affirmation, and pointed out how Diebold uses a program called GEMS, which fills the screen of the PC and effectively turns it into the central tabulator system.

"This is the official program that the County Supervisor sees," she said, pointing to a PC that was sitting between them loaded with Diebold's software.

Bev then had Dean open the GEMS program to see the results of a test election.

They went to the screen titled "Election Summary Report" and waited a moment while the PC "adds up all the votes from all the various precincts," and then saw that in this faux election Howard Dean had 1000 votes, Lex Luthor had 500, and Tiger Woods had none.

Dean was winning.

"Of course, you can't tamper with this software," Harris noted.

Diebold wrote a pretty good program.

But, it's running on a Windows PC.

So Harris had Dean close the Diebold GEMS software, go back to the normal Windows PC desktop, click on the "My Computer" icon, choose "Local Disk C:," open the folder titled GEMS, and open the sub-folder "LocalDB" which, Harris noted, "stands for local database, that's where they keep the votes."

Harris then had Dean double-click on a file in that folder titled "Central Tabulator Votes," which caused the PC to open the vote count in a database program like Excel.

In the "Sum of the Candidates" row of numbers, she found that in one precinct Dean had received 800 votes and Lex Luthor had gotten 400.

"Let's just flip those," Harris said, as Dean cut and pasted the numbers from one cell into the other.

"And," she added magnanimously, "let's give 100 votes to Tiger."

They closed the database, went back into the official GEMS software "the legitimate way, you're the county supervisor and you're checking on the progress of your election."

As the screen displayed the official voter tabulation, Harris said,

"And you can see now that Howard Dean has only 500 votes, Lex Luthor has 900, and Tiger Woods has 100."

Dean, the winner, was now the loser.

Harris sat up a bit straighter, smiled, and said, "We just edited an election, and it took us 90 seconds."

On live national television. (You can see the clip on www.votergate.tv.)

Which brings us back to Morris and those pesky exit polls that had Karen Hughes telling George W. Bush that he'd lost the election in a

landslide.

Morris's conspiracy theory is that the exit polls "were sabotage" to cause people in the western states to not bother voting for Bush, since the networks would call the election based on the exit polls for Kerry.

But the networks didn't do that, and had never intended to.

It makes far more sense that the exit polls were right - they weren't done on Diebold PCs - and that the vote itself was hacked.

And not only for the presidential candidate - Jeff Fisher thinks this hit him and pretty much every other Democratic candidate for national office in the most-hacked swing states.

So far, the only national "mainstream" media to come close to this story was Keith Olbermann on his show Friday night, November 5th, when he noted that it was curious that all the voting machine irregularities so far uncovered seem to favor Bush.

In the meantime, the Washington Post and other media are now going through single-bullet-theory-like contortions to explain how the exit polls had failed.

But I agree with Fox's Dick Morris on this one, at least in large part.

Wrapping up his story for The Hill, Morris wrote in his final paragraph, "This was no mere mistake. Exit polls cannot be as wrong across the board as they were on election night. I suspect foul play."

I guess this statement at the bottom of that page says it all:

Novice desiring to upgrade to Technician with HF privileges: You must pass
Element 3A before April 15, or pass Element 2 on/after April 15.

Anybody else have problems with RA's new web site?
Konqueror under Redhat 7.3 doesn't like the way it's laid
out and chops off huge chunks of various dropdown menus.
(Oh well, I three or four other browsers to try out).

But the original Star Trek was pitched to the executives as "Wagon Train
to the Stars", although a major part of the inspiration seems to have
been Capt. James Cook's expeditions to the south Pacific.

Check the groups.google.com archive in the comp.arch.embedded newsgroup
about that. The guys there often get stuck with interfacing to legacy
systems. I remember threads there comparing various USB-Serial converters.

Of note, verticals will usually work better for the further DX (low angle) signals coming in than the horizontal antenna configurations. Horizontal wires are nice for lower noise, at times, and for those stations that aren't a long ways away.

First you didnt address which argument was 'wrong' and you didnt
refute it. Address it and stop name-calling. Tell me if you can't
handle these undisputed arguments.

He did get warnings that Al-Qaida was a huge threat/plane attacks. He
didnt go in with an exit strategy depsite several Top Generals warning
otherwise. His job plan is behind predictions. And the yellowcake
documents were fakes.

John probably doesn't understand that. He's been working on his goose-step
for years.

1969. [ot] vision of America's role in the world.

Newsgroup: rec.radio.shortwave
Date: 2004-11-08 22:26:01 UTC
From: harveyat8c43z0@aol.com
Message-ID: <20041108172601.10328.00000134@mb-m25.aol.com>
Source record: 1966

There is also the disturbing tendency to insert theocratic
principles into the vision of America's role in the world.
There is
evil in the world. Nowhere in our Constitution or founding documents
is there support for the proposition that the United States was
given a special dispensation to eliminate it.
Surely Saddam Hussein
was an evil dictator. But there are quite a few of those still
around and no one is advocating eliminating them.
Neither
Washington, Adams, Madison nor Jefferson saw America as the world's
avenging angel. Any notion of going abroad seeking demons to destroy
concerned them above all else.
Mr. Bush's venture into crusaderism
frightened not only Muslims, it also frightened a very large number
of Americans with a sense of their own history.

That's why it should be mandatory to remove all doubt about
how many people would have voted for whom. 40% that didn't
vote is way too high and the fact that the system is totally
incapable of handling an additional 40% of voters doesn't
inspire confidence either.

Actually the American public lost by not having a truly
decisive election in which ALL eligible voters participated.
It merely raises questions in peoples minds about the
nature of the US democracy and whether it's real.

Agreed. What the right has accomplished in this election is to bring the question of whether this country really is a constitutional republic to the forefront of people's minds.

And there will ultimately be hell to pay for that.

It also has some of the best quotes of any episode. In one scene when
Spock realizes he could have recorded all of earth history from the
tricorder play back, he says succinctly, "I am a fool".

So what was the music they had to replace from the original airing?
It was my understanding they couldn't get rights to for the dvd
release.

Wait till the simple minded dummycrat liberals see the edition of
Newsweek that will be out soon. Newsweek had reporters imbedded in the
election campaign of each party. They were hired as campaign workers
and the fact they worked for Newsweek was kept seceret. They were
ordered by Newsweek to make no reporting of their observations until

after the election. It will reveal what really went on behind the scenes and for the dummycrats it isn't pretty, a total meltdown. Bickering, couldn't decide on a strategy, flip-flopping all over the place. They had to hide Kerry's cell phone from him because he would get all excited about something and call everyone he could think of in an attempt to make up his mind, and even then he couldn't make up his mind, totally indecisive. Teresa getting in the way, and they couldn't get her to keep her big mouth shut.
It will all be revealed.

Well at least you have those 'skills'.

That's not a fitting substitute for awareness or reasoning, though.

"According to the Miami Herald, Florida attempted to revive its felon purge lists in 2004, again rife with inaccuracy, again disproportionately disenfranchising black voters. By the far the worst tactic was revealed by New York Times columnist Bob Herbert, who exposed that the state of Florida was "investigating" get-out-the-vote drives among blacks in Orlando by sending armed police officers into the homes of mostly elderly, African-American citizens who had filed absentee ballots. For someone to authorize the intimidation and terrorization of poor elderly black women who came of age in the midst of the Jim Crow South is about as low as politics can get, and evidence of how much this election means to both sides.

It is the ones who vote that decide, the non-voters don't count. The
majority of the voters chose Bush. Bush won, Kerry lost...deal with it.

And Cuba, Phillipines, Grenada, El Salvador, Nicaragua, Guatemala, and even Canada (among many others). The US has thought since its founding that it has something special to share with the world, whether its a version of government, a philosophy or religion, or product.

I don't think someone like Jefferson would be electable today in the USA. Far too liberal. He wouldn't be prepared to talk about his religion during an election like your recent two did. I don't know about the others.

Please keep listening, you are actually quite wrong about Holland following the USA on immigration. It is the other way around, the USA is following them and most of Europe.

A a former colonial power, immigration has been a big issue for the Netherlands for at least 40-50 years. Lots of immigrants from places like Surinam, Curacao and Indonesia. Places that were Dutch colonies. The proportion of recent immigrants approaches 40% in some communities (by recent, I mean foreign born). Most of Europe is like this now - birth rate is low, only way to keep up the population is immigration. Hence the issues with support for both sides of the Israel-Palestine conflict for example.

Martyn of Gottahaveit1995 is on a buying binge ! 42 items in the past month alone. a little over a week ago he bought an SPR-4 and has already listed it !

Martyn Radio-mart has sold/selling over 240 items in the past month. everything in execllent condition.

just look at the two accounts and you will see they are the same person even if he denies it.

Jefferson would not have been inclined to talk religion during a
campaign, true, but he wouldn't have had to. People would likely have
been aware that he was the principle author of this line: "We hold
these truths to be self-evident, that all men are created equal, that
they are endowed by their Creator with certain unalienable Rights,
that among these are Life, Liberty and the pursuit of Happiness."

If anything, the part about being endowed by the Creator would have
caused him more electoral problems with today's hard core secularists
than accusations of being too liberal. Once those secularists also
learned that he authored a "bible," and said "Of all the systems of
morality, ancient or modern, which have come under my observation,
none appear to me so pure as that of Jesus," he probably would have

been classified as a bible thumping evangelical by the same people
who are now denigrating the role of morality in the last election.

nah, no need to. Since the Bush time line so resembles Hitlers and
his history, one only needs to wonder. By the way I see we're doing
our Stalingrad thing in Iraq right now. We might win this one though.
Topo bad the place isn't worth a single American life.

I don't disagree with that. Bush like Hitler conned the people but
the fact remains there are a lot of people fed up with the 2 party
system and that's why Nader was running, to protest it.

I didn't say that.

2020. FCC suspends Amateur Service License Grants - temporarily ?

This is not my post. I'm simply REposting it here in rec.radio.shortwave because I know that some of this group are also interested in "ham" radio. This repost begins immediately, without comment.

Al

==========

FCC Suspends Amateur Service License Grants to Unsnarl System Snafu

NEWINGTON, CT, Nov 8, 2004--The FCC has stopped issuing Amateur Service license grants while it attempts to unravel an apparent computer programming glitch. The FCC posted a public alert on the Universal Licensing System (ULS) site on November 5. At this point, no one seems to know when the problem will be fixed.

"The granting of Amateur applications has been temporarily suspended," the FCC announcement says without further explanation. "We apologize for the inconvenience." The Commission has given no indication when processing might resume, but when it does, the FCC likely will pull back more than 125 Group D (2x3) amateur call signs it mistakenly issued out of sequence and grant the applicants new in-sequence call signs. Although they eventually may be set aside and replaced, all call signs showing up in the ULS database remain legal.

The difficulties began October 28, when the FCC implemented a ULS software change that caused applications to be processed improperly. ARRL Volunteer Examiner Coordinator Manager Bart Jahnke, W9JJ, says the FCC was forced to stop processing amateur applications after attempts to correct the initial error only seemed to make things worse. "The FCC is still trying to get its arms around the problems," he said this week.

For some as-yet-undetermined reason the October 28 modification caused all amateur applications from the nation's VECs to be shunted into "Pending 2" status, flagging them for manual review without any justification.

By November 2, the FCC thought it had things under control again, and it reprocessed all the applications in the queue. At first blush, all looked to be in order, Jahnke said, but closer inspection revealed that the system had failed to grant some routine requests for new sequential call signs. "By the afternoon, we realized that the FCC had erroneously begun issuing new Group D call signs in several districts from altogether new call sign blocks--out of sequence from where processing in those districts had last ended," Jahnke said.

While the first and third call districts were unaffected, the FCC apparently jumped from issuing call signs in the KC2Nxx sequence to the WQ2Axx sequence, Jahnke said. It also had assigned WQ4xxx, WQ5xxx, WQ7xxx and WQ9xxx call signs. In the eighth district, there was a gap between KD8xxx to KM8xxx call signs, while in the tenth district the Commission went from KC0Txx to WI0Axx. In the sixth district, the sequence shifted from KG6Wxx to KI6Axx.

The ARRL VEC has been working with personnel in the FCC's licensing branch to identify where the FCC had been in the call sign sequences, where it had jumped to and where it was supposed to be.

Jahnke says the problem appears to have affected only Group D call signs. He emphasized that any call signs the FCC issued are in the ULS database and therefore are valid, and licensees may use them on the air.

"Just don't get too familiar with them," he advised. "It is our understanding that at some point, the FCC will set aside the out-of-sequence grants and issue new call signs to affected licensees."

So what, who's talking about Clinton?
The topic is Bush, stay on topic.

> You should have provided some basis for comparison for your 20.5% number.

4/5 of the US citizenry did NOT vote for Bush.
What is there to compare?

2024. Re: What radio on 1510 Khz recieved in europe ?

Newsgroup: rec.radio.shortwave
Date: 2004-11-09 00:58:36 UTC
From: F4DUK <psenomail@wanadob.fr>
Message-ID: <41901638$0$16907$8fcfb975@news.wanadoo.fr>
Source record: 2026

Hello,

I heard it between 3:00z and 4:00z, I have to check the exact frequency by commutating my receiver in SSB mode (zero beat). The frequency was exactly 1510 Khz and the 1512 Khz was clear.

I also heard on 1370 Khz a radio in Spanish language From south America.

For the Callsign I believed to hear initials "WYRT", but I am not sure.

> Burnsville, Minnesota

Thanks for that, Steve. Great catch, Greece on AM. You may be interested to know that, in the 80's/early 90's (in Scotland), caught quite a few AM stations from the US, Canada, and South America. Remember (gleefully) counting a total of 120 for US/Canada, though my efforts were by no means exceptional. The strongest ones were from the east coast, but managed a few further west, including KMOX St.Louis (1120). Don't think I managed Minnesota, but may give the whole thing a try again this winter. Used to have an amplified loop with positive feedback. Was able to peak weak carriers right out in front of strong ones. Need to rebuild that loop again.

Some people occasionally go on a "DX-pedition" to the north-west coast of Scotland, at Sheigra. Chosen for its isolation from the electrical grid and good locale for the setup of MW beverage antennae. They get quite a number of great results -

http://www.users.waitrose.com/~bdxc/articles.html

Looks like KFAN 1130 Minnesota might be a good one to go for!

Of course, you have the advantage of not having to stay up as late as I have, to get the trans-Atlantic DX. On the other hand, we get to enjoy the "great" climate here. Well, at least it doesn't go "30 below" like over there. That would bother even a hardened Scotsman. :-)

Neither you nor anyone else tells me what to do.
Your *implicit* assumption is invalid.

If every voter in the nation voted for the same person, that person STILL
wouldn't have a mandate.
See if you can figure out why.

Just tuned to 40 and 80 meters and it's
a complete washout! Much like daytime
propagation, no signals except for a
few here and there and those we can hear
have very heavy "storm drain pipe" aurora
effect on them rendering them almost
unintelligible. Even some of the big shortwave
guns like WWCR and WBCQ and either
gone or very difficult to hear as of 7:10 PM
Central Time. see www.spaceweather.com
for some nifty photos of last nite's aurora!

2041. Re: What radio on 1510 Khz recieved in europe ?

Hi, JuLiE Dxer and all

Yes, it is incredible like you say, I received this radio, with the internal antenna of my receiver Sony 7600G.

By nights of winter it is possible to hear some Medium Wave DX stations from East coast of the United States and South East of South America.
and some managed to hear stations on long wave like "Europe 1" 183Khz and 252Khz Ireland and Algeria.

I even saw an Internet site where somebody of New-Zealand which could hear the sound carrier French television TF1, it is possible to listen to on the site the recording which is very short.

Yes, F4DUK is my amateur radio callsign.

73
Jean

Oui, c'est incroyable comme vous dites j'ai bien entendu cette radio, avec l'antenne interne de mon r�cepteur Sony 7600G.
Il m'arrive les nuits d'hiver d'entendre des stations DX de la c�te EST des
�tats-Unis et du SUD EST de l'am�rique du Sud.
Oui, F4DUK est mon indicatif radioamateur
Des amis d'am�rique, m'ont dit qu'ils leur arrivaient d'entendre parfois
des stations europ�enne en ondes moyenne.
et certains sont parvenus � entendre des stations en onde longue comme
Europe 1 183Khz et 252Khz Ireland and Algeria.

It isn't but to say that Bush has a mandate is opure dishonesty.
Bush, like most presidents since FDR is grossly over stepping the
boundries set down by the founding fathers for the office of
president. The arrogant bastard needs to be reeled in.

Here's the purchase:

<http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=4673&item=5728364202>

He took out the options and is selling them individually - and the radio
condition has improved from "very good to excellent" to "like new"

Radio
<http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=4673&item=5730479841&rd=1>

Noise Blanker
<http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=4673&item=5730479621&rd=1>

Plus several auctions for the optional crystals.

The bushkultie approves of other crimes besides election fraud.

He also enjoys child rapes, tortures, and other war crimes.

That's the problem for him: he's immoral.

On 8 Nov 2004 12:41:41 -0600, Dan <swkcnfjngf@fdgjgf.org> wrote:

How many elections do you remember when *every* eligible voter voted?
If someone is an eligible voter and doesn't vote, that's their problem,
assuming they aren't physically unable because of health or other
extenuating problems to do so.

I know you're going to think I'm nuts, but I think I caught 3320.0
R.SonderGrense, from S. Africa tonight. At 00:48utc I tuned in and
the language at first seemed either Dutch or German, and indeed, it
was being broadcast (according to ILG) in Afrikaan, so, I waited
through the hour mark, but didn't recognize an ID, but their might
have been one, there was quite a bit of fading. It is a 100,000 watt
station, so who knows.
(I also think I may have briefly caught 2390.0 XEJN Huayacocotla
from MEXICO, music, (sounded like an accordion, with the second song
sounding "cajun" with fiddle) with very deep fade, almost not there,
at 00:28-00:31utc and considering it is a 500 watt station, I sort of
doubt it, but that was all that was listed at that time)
I'm in so mo, using a very long random wire connected to a yb400pe,
coax fed, and grounded.
And yes, I know, without an ID, this is darn impossible to figure out,

I'm sorry, Jean, but there is no North American radio station I am
aware of on 1510kHz with call letters that even remotely like "WYRT". I
don't know what you were hearing.

Tony

Lucky son of a gun.

I have a friend who was deer hunting near Biwabik, and he says
the same. They were visible in the Twin Cities, but not spectacular.
I'll keep watching tonight, just the same. The FM band has quieted
down just a bit, as well - HF is dead as a doornail. I can hear KYCR-1570
from Golden Valley just fine, as there is no competition on the same
channel.

"Ian Smith" <ianinhoose@btinternet.naespam.com> wrote:

| Thanks for that, Steve. Great catch, Greece on AM. You may be
| interested to know that, in the 80's/early 90's (in Scotland), caught
| quite a few AM stations from the US, Canada, and South America.
| Remember (gleefully) counting a total of 120 for US/Canada, though my
| efforts were by no means exceptional. The strongest ones were from the
| east coast, but managed a few further west, including KMOX St.Louis
| (1120). Don't think I managed Minnesota, but may give the whole thing
| a try again this winter. Used to have an amplified loop with positive
| feedback. Was able to peak weak carriers right out in front of strong
| ones. Need to rebuild that loop again.

I don't know how much space you've got, Ian (I live in an apartment,
myself), but I would highly recommend a large - aperture loop antenna.
I have a couple of the NRC publications, and would be glad to share
them with you. In my experience, most of the amplification schemes
I've used introduced quite a bit of noise into the signal, so that was a
setback.

| Some people occasionally go on a "DX-pedition" to the north-west
| coast of Scotland, at Sheigra. Chosen for its isolation from the
| electrical grid and good locale for the setup of MW beverage antennae.
| They get quite a number of great results -
|
| http://www.users.waitrose.com/~bdxc/articles.html

I have that site bookmarked, and can only say that I am looking forward
to my next trip back to Nebraska (In Spring, perhaps) to try my hand at
using beverage antennas (as opposed to using beverages; that's another
story and requires extensive refrigeration!).

| Looks like KFAN 1130 Minnesota might be a good one to go for!

You know, Ian, I've been cooking up a scheme, maybe getting on #SWL
or another Instant Messaging program, and using that for communicating
DX catches. Such a thing is also really useful for comparing "catches." I
remember fondly chatting in ICQ with Alf Ardal, a DXer in Norway with
a respectable beverage or two (or three), and verifying that he was, indeed,
hearing 1620 from Omaha (another sports talk outlet). KFAN is actually
a bit of a pest - I live about 3 miles from the transmitter site, and if
you'd
like, I can send some pics of the antenna system. It's located in a bog
along the Minnesota River, East of Shakopee, Minnesota.

| Of course, you have the advantage of not having to stay up as late
| as I have, to get the trans-Atlantic DX. On the other hand, we get to
| enjoy the "great" climate here. Well, at least it doesn't go "30
| below" like over there. That would bother even a hardened Scotsman.
| :-)

Snow builds character. Actually, I've camped in blizzards. When I
relate that story to my wife, she rolls her eyes and gives me "the look."

Let me know if you'd like a copy of my NRC books - I've used them as
far as I can at present.

It is obvious that the fundamental flaw of democracy is that, in any society, stupid people outnumber smart people. It is clear from a glance at the electoral map that those areas possessing so much as the slightest glimmer of intellectual and cultural sophistication are all blue with the rest being all red.

Now you know why they call them "red" necks.

A veritable "Rednik" Rampage.

Oh come on RH, America is no longer practicing isolationism.
And noone is making Americans feel guilty about loving
America and being patriotic. Who the hell are the "Liberal
Elite" and "One Worlders" -- is this some mythological,
idealogical creation of the paranoid Right?

There's no evidence the bushkultie ever managed to
read this for comprehension in the first place, though.

He's not even permitted to consider it rationally.

We have been seeing some Sun action lately.

NOAA Scales Maximum in Currently
past 24-hours
Geomagnetic Storms extreme moderate
Solar Radiation Storms moderate minor
Radio Blackouts minor none

I was just listening to New Zealand and they had a piece on DRM from
3:00 to 3:45 UTC where someone played received DRM from different points
on the globe. It all sounded fine on AM if you know what I mean.

New Zealand sounded good on 17675 and also good on 15340 where they
switched to at 4:00 UTC.

Been rereading Joe Carr's Receiving Antenna Handbook,
and I was wondering if anyone has tried Joe's suggestion
(well, Victor Misek's, originally) of using RG-174 in
a Faraday shield version of the step down winding, and
whether there was much of a difference in the result.

Ugh, conditions are nasty tonight. Were it not for
the solar conditions, I'd be checking my setup for
problems.

Elite intolerance of the type we've seen since the election for the
mores of the "red county" voter doesn't rise to the level of
persecution, so there's no need to try to exaggerate what I said for
effect. But if you aren't clued in to the mindset I'm talking about,
you must not have spent much time on college campuses lately. Or read
the New York Times. Or listened to your average Hollywood
"celebrity."

I suspect (don't know, but suspect) that it's a 50 ohm
input. Either way, making a step down transformer
will make a difference. I've done one for the random
wire I have running outside (based on the advice here),
and it really does do the trick. Try the following link
and look at John Bryant's MS Word article:

http://www.dxing.info/equipment/

As for the other questions, I'll leave that to the others
who have had more experimentation time to work
with.

> 300 ohm TV cable has the advantage of being already in the wall).

The 300 ohm cable will work but 50 or 75 ohm coax would be better since
the antenna impedance of a loop antenna, not bothering to make a proper
T2FD is around the 50 to 100 ohms region. I don't know but expect the
radio's input impedance to be around that also.

> 2. T2FDs apparently like to be tilted (hence the name) about 20-40
> degrees. I'll be lucky to get a 15 degree angle in my attic, and less
> if I go out to 40'. How critical is the angle? What happens if the
> wires are basically horisontal?

I would not worry about the tilt. Tilting it will allow you to make it a
little bigger in the same space but is not important. I would not bother
with the resistor either, just make it a wire loop.

> 3. With 29' of space to use, what frequencies am I just not going to
> get?

The bigger the loop the lower the frequency it will work on. It is the
length of the loop that counts. Lets say you can make it 10 ' high and
29 ' long.

78 ' = 29' + 29' +10' +10'

This would be resonant around 12 MHz so it would work well on on the 25 meter band and up. Probably OK on 31 meter band and then worse as you went lower.

The loop formula is length in feet (circumference) = 1005 / F MHz

If you need a lower frequency reception then you can use more than one turn. Separate the turns at least a few inches.

> 4. Am I better off with a 40' (total length of both wires) dipole
> instead of the extra fuss of the T2FD? Or do I really need to get a
> long wire outside to get anything (which I don't want to do, as even
> insulated copper seems to rot quickly if exposed to rain around
> here.)

Depends on the receiver. The dipole will work but the loop will probably work better.

Well, you have a portable that can overload on strong signals and the loop will probably put out more signal than the dipole. You will most likely do OK with the 300 ohm twin lead to a dipole.

If noise becomes a problem the loop will be quieter.

> 5. If I mostly want Europe, should I do the extra fuss needed to
> fight for a N-S orientation of my wire?

For a one wavelength or more loop run the wire north / south for east / west reception.

> Thanks for any help. Email appreciated but I'll be looking here as
> well.

I only post to Usenet and don't email replies. Good luck.

Fair enough. My policy is the voters are always right. In
any case, how is the intollerance of some "liberals" any
different than the intollerance of some "liberal-hating"
conservatives? And why label either one "elite"?

>Scott

Scott,
With a portable radio 29' is adequate length for an antenna, especially as you are targeting a 'major' broadcaster. You may even discover that you get adequate reception with the whip. Being one to start with simple solutions, so if the whip isn't suitable (and it will limit you to the higher powered broadcasters) I'd suggest running the wire for the antenna - what wire you use isn't critical so if you have that length of speaker cable handy go for it. Next, connect both leads of the 300 ohm cable together at each end; connect the end in the attic to your wire antenna; next get an audio patch cable (phono jack on each end) long enough to reach from the 300 ohm cable outlet to your radio and clip one connector off and strip the jacket and ground cable & connect the inner conductor the the 300 ohm cable. Plug the phono plug into your radio and you're set. The 300 ohm cable is part of the antenna and you are not grounded so you may indeed pick up noise from home electronics & appliances. If so, you will benefit from coax - and to get the full benefit of the shield a suitable ground is needed. Without the ground you may still realize improvement though. At tht point you could use the 300 ohm cable to snake the coax - if it's not stapled to any studs 8-} Again though, try the simplest solution first - if it fills your needs call it a good day & relax while listening to your radio.

Hope this helps & good luck,
Howard

> who are now denigrating the role of morality in the last election.

However, Jefferson admitted, "In the New Testament there is
internal evidence that parts of it have proceeded from an
extraordinary man and that other parts are the fabric of
very inferior minds..."

Jefferson also wrote, "The day will come when the mystical
generation of Jesus, by the Supreme Being as his Father, in
the womb of a virgin, will be classed with the fable of the
generation of Minerva in the brain of Jupiter...we may hope
that the dawn of reason and freedom of thought in these
United States will do away all this..."

If anything, the part about not being Christian would have
caused him the most electoral problems with today's USA.

Of course...but why bother?
You're dealing with a stupid communist.
If you look at the propaganda put ot by both the fake parties you
would even think there was a "2"party system.
Kerry the coward cousin,and Germanic Death Cultist Skull and Bones boy
used the crooked election machines to steal the nomination from Dean
```

and the commie former Black Panther Marxist turned libertarian
/Reganite Republican Horowitz and his pal Rove gave the scream the
dirty commie press treatment like you would expect in Russia.
(Theres one party rule there again,Reagan really stopped them eh?
Hahahaha)
All Russia did was change it's party name and used the time to
reorganize "order out of chaos" and gave the US new lies for old.
And Russia really won in the long run.
And you have to fight with a stupid communist that thinks it's
American and moral because the propaganda machine tells him thats how
a good
party member should talk.

A good party member would either be duped by Micheal Moore or the phon
counter documentaries put out by the Republicommies and never look at
the complete picture.

If you're going to use your TV do your own "programming" I always say.

Which is a shame because the Rendon Group creates all this taxpayer
funded propaganda to enslave your mind,and the shite is
unwatchable.Unless you're a lazy and stupid commie.
Then it's Gospel !

Kelly McGinley -- Wake up America, Communism is Not Dead
WAKE UP AMERICA, COMMUNISM IS NOT DEAD
ï¿½
ï¿½
By Kelly McGinley
October 23, 2004
NewsWithViews.com
Recently I reviewed textbooks being considered for adoption by
Alabama's textbook committee. I wanted to inform them how important
their job was due to the anti American bias in most textbooks.
A product of public schools, I have been working toward personal
remedial education, especially as it pertains to the history of
America.
Not surprising is that most Americans need remedial education. This
came to the light during the Korean War. American soldiers were badly
prepared for defending America after they were captured by the
Communists. Their captors found torture was not necessary to get
information or to influence attitudes. Our young men could not even
defend American values and culture. This information from North Korea
brought about congressional hearings.
Based on the findings of the armed forces and the U.S. Senate,
historian Russell Kirk, was alarmed that most Americans were badly
prepared for their task of defending their own convictions, interests
and institutions against the grim threat of our nation's enemies. Kirk
stated, "And in our age, when all civilization is immediately menaced,

good-natured ignorance is a luxury none of us can afford." He wrote a primer called "The American Cause" which the armed forces distributed to our soldiers.
Historian David McCullough issued a warning during recent testimony before a Senate committee hearing. "We are raising a generation of people who are historically illiterate and ignorant of the basic philosophical foundations of our constitutional free society? ? McCullough lambasted the politically correct textbooks being used in elementary, middle and high schools to recast American history as multiculturalist dogma.
One American officer stated that this ignorance is the "Number one social disease of America. Its prevention and its treatment are essential to the continuing survival of our system."
Is this apparent dumbing down an accident or a planned event?

I have been studying the Communist intellectual infiltration into this country. Thanks to Myron Fagan, a play writer in the 40's & 50's, 300 of the most ardent Communist movie stars were flushed out of Hollywood. Many were the most popular of that day. After 3 congressional hearings, congress created a list of 300 communist stars in Hollywood. Ten went to prison, thanks to Representative Parnell Thomas who was the head of the "Committee of Un-American Activities". Because of America's short memory these stars kept returning to America. Ronald Reagan was a part of the whole thing, even being subpoenaed to the hearings in congress. He yelled the loudest that there were no more Communists in Hollywood. This helped lull Americans back to sleep, as if Communist's ever give up. The effects of Hollywood on this country are evident, their motto being "freedom of speech".
What were they trying to do in Hollywood? Make movies applauding Communism at the same time destroying our American Heritage and Christian values and virtues. Movies like "Mission to Moscow" and "Song of Russia".
If it wasn't accidental in Hollywood, there is a good chance it has not been accidental in the public schools.
The same plan from Hollywood was adopted by our public schools. In 1913 the NEA established the "Commission on the Reorganization of Secondary Education". Bulletin 41 states: "It is not so important that the pupil know how the President is elected or that he shall understand the duties of the health officer in his community. The time formerly spent in the effort to understand the process of passing a law under the President's veto is now to be more preferably used in the observation of vocational resources of the community. The committee recommends that social studies in the high school shall include community health, housing, homes, human rights versus property rights,?.the selfish conservatissm of traditions and public utilities."
In 1929 John Dewey, known as the Father of Modern Education and an author of "The Humanist Manifesto", wrote a glowing article about Russian schools having just returned from the Soviet Union. In Dec. 5,

1928, edition of "The New Republic" Dewey described statist schools in Russia as "the marvelous development of progressive educational ideas and practices under the fostering care of the Bolshevist government... the required collectivee and cooperative mentality. The great task of the school is to counteractt and transform those domestic and neighborhood tendencies----the influence of home and Church"

In 1958 President Dwight D. Eisenhower signed the first education agreement with the Soviet Union. Similar agreements have been signed by the Carnegie Corporation and Soviet Academy of Science and President Reagan and Gorbrachov in 1985 which still remain in effect.

The NEA Journal introduced "The New Social Studies" program in 1967. "Probably the most obvious change occurring in the social studies curriculum is breaking away from the traditional dominance of history, geography & civics. Material from the behavioral sciences, sociology, social psychology... are being ng incorporated into both elementary & secondary school programs."

None of these new civic books explains the real reason people come to America. Also not addressed: why we fought the American Revolution, the miracle of the idea of "self government", why they established this republican form of government. There is no mention that it was to protect our God given rights. Why is our country better than any other and founded on the highest principled men of goodwill? Men who had a biblical worldview, who feared God, understood the wickedness of governments. Instead students are taught to be ashamed of our country and our founding fathers.

Evolution is supposed to be taught as a theory. In Alabama there is a disclaimer on the front of all the science books. Today we need a disclaimer on all these textbooks because evolution has been incorporated into every word.

Without any facts to back up this philosophy, evolution has been injected in these books as absolute truth while morality, character, values and ethics are not absolute and can vary. Respect of perversion and behaviors that are still against the law in Alabama abound in all the sociology books.

The psychology books define homophobes as the problem and homosexuality as normal. Sex is taught to children without truth. The pandemic of STD's is kept quiet. The short life span (46 years) of an active homosexual male is not even mentioned.

Alfred Kinsey, a pedophile, is quoted as an expert on sex even though his research is fraudulent and sexually abused babies as young as 5 months old. Family and marriage have been redefined in all the books.

"Sociology" by Holt has a whole subchapter on hate crimes pointing out that white Christians are the main culprits. They even have a map of the U.S. with dots showing places where hate groups are located. It shows many right here in Alabama.

In reviewing these textbooks, I was not surprised to see anti-American, anti-Christian, anti-white man philosophies, while at the same time promoting socialism and Communism.

There is no such thing as a "value free" education. These textbooks shape values and attitudes away from the biblical values. Character,

values and ethics are gathered by group consensus instead of presented as absolute, enduring principles from the Creator of the Universe.
In the textbook titled "Sociology & You", publisher Glenco, page 316, they compared our historical patriarchal society to Afghanistan, China and Iraq.
In "Civics" by Davis Fernlund, the white man is a greedy, racist bigot. He instructs, "Freedom is the ability to make choices", that our republic is a democracy and that the duty of citizens is to "attend school". This textbook pits the rich against the poor, black against the white and women against men.
These textbooks are an affront to all the true founding principles of our country. An affront to all the truths we hold dear. That we were created, that we have rights and responsibilities given by our Creator. That there is right and wrong and absolute truth. That Christianity is better than Islam. That self government is better than communism. That no one has the right to do wrong and white man is not more evil than everyone else.
If Representative Parnell Thomas and his committee on un American activities were around today, I believe these textbooks, the authors and publishers would be arrested for treasonous activities.
I encouraged this textbook committee to reject all these books and revisit our textbooks from a generation ago.
Our freedom is not being destroyed by terrorists, but by ignorance, apathy and complacency. Our government schools are to blame because of textbooks like these. Our dumbing down is not accidental but a very well organized plan.

I once had a receiver listed for sale on ebay and it did not hit the reserve. After the auction ended I got an email from buyer gottahaveit1995 asking how much he could buy it for outright. The second email appeared as this from gottahaveit 1995:

Well you could always sell it to me for my Max bid??
Just let me know
73s
Leslie
Martyn & Leslie Allison
205 Salem Road
Sadieville, KY 40370
859-221-8015

I declined to sell him the radio and then re-listed it. I kept all the emails. Is gottahaveit1995 radio-mart? As my teenagers would say, "dughhh!".

You seem to have a major problem with the concept of the entire
electorate turning out to vote. Why is that? Apart from some misguided
concept of "liberty" which is far overshadowed by the fact the president
only got 32% of the vote BTW...
```

The people that voted for the winner have no right to complain about his
future behavior.
Those folks knew very well the history of the winner, so his future actions
should come as no surprise.
Non-voters are non-participants in this silly political game and may
complain as they please.

Now, you can opine and
> complain to your hearts desire, but no one else is likely to

This from a person that openly chooses slavery and theft for himself and
others.
As you have admitted acceptance of the immoral act of theft, there is little
credibility in anything else you may say.

Well, the easy part is that all of the voters lumped together STILL aren't a
majority of the US populace.

If every single, solitarity voter voted for the same candidate, you would
still have a minority assigning to a majority.
Of course this is never the correct thing to do.

HARVEY,

What about a 'little' part of our American History called
"Manifest Destiny" ?
http://www.pbs.org/kera/usmexicanwar/dialogues/prelude/manifest/manifestdestiny.html
http://www.nps.gov/fosc/mandest.htm
http://en.wikipedia.org/wiki/Manifest_Destiny

The Louisiana Purchase negotiate by James Monroe for President
Thomas Jefferson in 1803.

The Purchase of Alaska from Russia by William H. Seward under
President Andrew Johnson in 1867.

The Treaty of Ghent between the UK and USofA after the War of
1812 {The Invassion of Canada} that defined our Northern Boarder
an gave us the "Northwest Angle" under President James Madison 1814.

The Mexican-American War and Treaty of Guadalupe Hidalgo under
President James Knox Polk.

The Gadsden Purchase USofA Southern Border from Mexico under
President Franklin Pierce in 1853.

The Spanish-American War and the "Annexing" Philippines, Guam
and Puerto Rico under President William McKinley.

Sent Commodore Matthew Perry to "Force" Japan to open-up Trade
with 'The West' under President Millard Fillmore.

The Second Opium War and the Invasion of China for Trade Access
under President James Buchanan.

The USofA entered World War I under President Woodrow Wilson.

The USofA entered World War II under President Franklin D. Roosevelt.

The USofA entered the Korean War under President Harry S. Truman.

The USofA attempted the Bay of Pigs under President John F. Kennedy.

The USofA escalated the Vietnam War under President Lyndon B. Johnson.

The USofA "Invaded" Granada under Ronald Wilson Reagan.

The USofA entered the Iraq Gulf War I under President George HW Bush.

The USofA entered Somalia under President Bill Clinton.

The USofA entered the Bosnia ETC under President Bill Clinton.

The USofA re-entered the Iraq Gulf War II under President George W
Bush.

I'll never forget how it started in my own case. When I was a kid, an uncle came to visit and after he left I discovered that he'd forgotten to take his small Sony shortwave radio home with him. I remember turning it on and hearing WWV, Radio Moscow and a few other things. I thought it was so *interesting* that this radio wasn't like any of the other radios we had lying around! Back in those days there were many more numbers stations too. Anyway, I listened to this thing just about every day and night. Eventually my uncle came back for another visit, but when he saw how much I loved the shortwave he conveniently "forgot" it again---as he did on every future visit. He knew I'd been "bitten"! What a great uncle!

While the 7030+ is no longer being imported, it's possible they have one left in stock.

Or they may have forgotten to update the page.

2144. R. Verdad, Guatemala, during geomagnetic storm

Newsgroup: rec.radio.shortwave
Date: 2004-11-09 15:03:10 UTC
From: bpnjensen@yahoo.com
Message-ID: <37af7e1c.0411090703.6a5f84cb@posting.google.com>
Source record: 2091

November 9, 2004 - The geomagnetic disturbance wasn't bad for everyone, everywhere. From my QTH near San Francisco, California, about 37.7 degrees N, tropical stations below 5 MHz were popping everywhere. Most were very weak, which is typical anyway, but there were a lot more of them, and some were surprisingly loud. Several Brazilians were doing splendidly, and I tripled my lifetime total of Guatemalans, including several easily-heard IDs.

The standout was Radio Verdad, 4052.5 kHz, from Chiquimula, Guatemala. At only 800 watts, this little gem came charging through the scuzz. SINPO = 15231 to 25232, very bad atmospheric noise, but the signal increase was just that tad bigger. From 0250 until 0325, I was able to copy enough to work up a reception report for potential QSL. Copied the station playing several numbers from "Prairie Home Companion," with Garrison Keillor's voice wafting through the ether, then onto hymns and evangelical discussion in Spanish. Faded out by 0330, but showed up again about 0545, with playback of an unid EE-language play or interview to 0600.

Also R. Cultural Coatan (also Guatemala) around 0230 with IDs and "Buenas Noches" announcements to sign-off at 0239; some others.

Icom R75, 45-foot random wire phased with 88-foot dipole, about 27' above ground.

73,
Bruce Jensen

That's not really what I said - obviously, other nations have been thinking about it more or less, but Europe (at least parts of it) has been seemingly allowing immigration by Muslims wholeheartedly. However, with this event, Holland seems to have become galvanized to finally try to reckon with it in such a way that goes beyond what they have so far been willing to try.

Of course, we haven't been trying very hard - our porous borders let through thousands of illegal immigrants every day. It really needs to change if we're going to get serious. We'll see.

Bruce Jensen

The fact that assholes like you refuse to put up with any discomfort
and sacrifice is the reason we are going down in flames.

That's what you get for listening to corporations instead of
scientists. Have a nice trip.

Hell, I'm selling them on EBay - - - and they're going to need them.

>Better put it on.

This is the gentlest thing I've said in a month. Did you not see me out
there in the front lines in the week before the election, generously and
heroically doing my best to save souls for the Lord, warning them all of the
Devil Himelf's ever so seductive little trap - - - "devi"ously tricking them
into not only being "fooled once," but now, "fooled twice" into voting FOR
the AntiChrist, thus, getting their Eternal Life revoked upon being soon
called before The Great Throne of Judgement.

The only thing louder than the thunder will be the gnashing of their teeth.

Can't you just smell their souls fermenting already?

"The Rapture" may be now most effectively and accurately described as
"The Rupture."

(It's a bust!)

You know what they say about being fooled twice . . .

"Repent! The End is near!"

Well, that's not exactly what I said, and I'm not really talking about
that bigger picture anyway. The last three years have seen a shift in
thinking about how everybody gets along with their fellow earthlings,
with a soft focus on whether the Muslims can actually do this at all.
The assassin did not help his cause in Europe by murdering Van Gogh if
it is going to make Holland a place of major concern over the presence
of Muslims. I believe that this is a step beyond what you have
described here, and more focussed than before...Surinam and Curacao
probably never brought the threat of revolutionary terrorism home to
Holland like this one does.

That's all for me - I'll keep listening.

Source record: 2155

SM,

From what you have described, I would say there is no
real advantage to using a T2FD in your Attic.

There are several Images of Attic Antennas in the "Shortwave
Listeners (SWL) Antenna and AM/FM Antennas eGroup on YAHOO !

SWL Antenna's "Photo" Section "In-the-Attic" Antennas:
http://photos.groups.yahoo.com/group/Shortwave-SWL-Antenna/lst
* Random Wire Antenna in the Attic (Flat)
* Loop Antenna in the Attic (Flat)
* Attic Conical Loop Antenna {More Wire... More Wire} (3D)
* Snake In-the-Attic SWL Antenna {Very Simple One Piece}
* Dual Windom SWL Antenna (3D)
* Folded 203 Ft Random Wire MLB (3D)
* Dual Attic Loop Antenna (T2FD?) or Figure Eight Loop (3D)
* In-the-Attic Folded 'E' Loop Antenna or T2FD (3D)

NOTE: Most of the Sangean AM/FM/Shortwave radios use a
1/8" Mono-Jack for the External Antenna Input.

KISAP: I recommend using TV type Antenna Parts for most
"In-the-Attic" Antenna installations.

* 75 Ohm Coax Cable for the Feed-in-Line
for Household 'man-made' Noise RFI/EMF Reduction.

* TV 75 Ohm to 300 Ohm Matching Transformer (Balun) for
Noise RFI/EMF Reduction and AM/MW Band Signal Reduction.

* TV 300 Ohm Twin Lead for the Wire Antenna Element
50-100 Feet -or- 90 Feet of Insulated Hook-Up Wire.

* "F" Jack to 1/8" Plug (1/8" Mono-Jack Adapter)
RadioShack Catalog # 278-257

Here are several Messages to Read about In-the-Attic Antennas:

* Things-to-Think-About: Using Attic Antenna with the your
'portable' AM/FM/Shortwave Radio.
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/1658

* A Compilation of "In-the-ATTIC" Antennas
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/426

* Low Cost SWL Antenna (Made From TV Parts)
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/17

* ATTIC - Receiving Antenna Question - Think Loop made from TV Parts
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/1635

* Ground Required At Balun ? {Getting "Grounded" in your Attic}
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/287

* Snake-in-the-Attic SWL Antenna {Simplest Low Noise Attic Antenna}
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/313
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/317

I can confirm this. I know for a fact that "radiomart" is/was Martyn in
Sadieville, KY. I'm not sure of the last name, but surely they're the same
person.

2160. Re: EBay sellers to repay $90,000 in bid fraud

Newsgroup: rec.radio.shortwave

I think that Ebay can be a good place for buyer and seller to connect
if you take a few precautions. For instance as a buyer I avoid
sellers with less than 99% positive feedback and look for buyers with
an established record.
As a seller I give more leeway in negative feedbacks before turning a
buyer down. I won't ship before payment has cleared.

It makes sense to read the negative feedbacks a person gets - sometimes it's obvious the person who left it is a crackpot. Sometimes it's less obvious, but the person leaving the neg has a bad reputation.

"I paid yesterday, where's my stuff?"

"Bum left me a Neg because I didn't pay"

Obviously negs related to fraud or deception are cause for concern.

MM,

About 1/3 of American Citizens (Voters) would 'identify themselves'
as "Practicing Christians" {Weekly Church Going Christians}.

About 1/3 of American Citizens (Voters) would 'identify themselves'
as 'secular christians' as reflected by "Their" Personal Life
History and the American Culture and Traditions "They" Observe.
{Attend Church at Christmas and Easter; and Get Baptized and
Get Married in a Church.}

About 1/3 of American Citizens (Voters) would 'identify themselves'
as something "Other". Such as: Jewish, Islamic, Buddhist, Hindu,
or may be an Agnostic; or possibly an Atheist.

This Is WHY I Said: Most (Two-Thirds) would 'self-identified'
themselves by their life experiences and family histories as

'basically' be Christians in their Beliefs.
[As 'contrasted' to Islam and Atheism.]

I still enjoy, and have also recently used, that line from Saturday
Night Live. Times like this make for rather interesting shortwave
listening a well as the myriad of political impacts. Anyone care to
speculate how the Palestinians will tie it into an Israeli plot?

Thanks for getting me to clarify an important point. Only the first year of Gilligan can be properly placed in the Island Noir genre. I know it's hard to believe, but there are still some people who don't "get it". For them, I suggest they imagine some cast changes. Picture the Skipper and Gilligan played by Sidney Greenstreet and Peter Lorre. Mr. and Mrs. Howell played by Edward G. Robinson and Bette Davis. Ginger portrayed by Veronica Lake. Of course, the Professor would be Robert Mitchum.

With such a cast, the true nature of the island elite would have been obvious to even the most doltish, thick-headed viewer. Even some TV critics might have gotten beyond the question, "Howcum they brought so many cigarettes for a three hour tour?". But casting the castaways as comedic figures goes even beyond the brilliance of casting Fred MacMurray as Walter Neff. In this way, we get to see the other islanders as the trusting, innocent Mary Ann sees them. It's only as we mature, and listen to enough domestic shortwave radio, that the lies and moral corruption of Mary Ann's fellow islanders become apparent.

But those later color episodes in which people start showing up? Well, those episodes are just plain silly.

Why would you post this? I see no relevant radio content.
Who cares.
All you do is chase people away from the hobby, instead of encouraging
them.
I find it interesting that, in a hobby that should promote a greater
understanding between people around the world, all you want to do is
cause more turmoil.
I have neither the time, nor the inclination to deal with you.

TIP#1: Grow up.
TIP#2: Get a life.
Tip#3: You're not really paranoid if everyone really does hate you.

2172. DRM receivers

Please excuse any ignorance I am going to show- you have helped me a lot as I learned to DX and what kind of radio gives the most bang for the buck.

What is the real deal with DRM? Are analog SW radios going away? Have any of you invested in a DRM capable receiver and how are they? Should I begin to move towards DRM and if so, what receivers will pick up and decode those signals? What are the limitations, or the cons if any, of DRM?

Thanks for any info/opinions you are willing to pass on...

I didn't know anything about RadioMart at the time. I wonder if that info
can still be found somehow.

I'm surprised they haven't accused Arafat's wife
of it. She sounds like a real Imelda Marcos, man.

I still enjoy, and have also recently used, that line from Saturday
Night Live. Times like this make for rather interesting shortwave
listening a well as the myriad of political impacts. Anyone care to
speculate how the Palestinians will tie it into an Israeli plot?
I believe they already did. It was a question of poisoning.

It makes you wonder how and why anyone would ever really want to talk in terms of a "mandate." I guess most people in the US have gotten used to the idea of some other bunch of people coopting their approval without that ever really being the case. To me mandates aren't just nearly impossible to achieve, they'd be so narrow as to be nearly meaningless if you did get one. If by some stretch of the imagination we were willing to assume that Bush got a "mandate," what would the mandate be? not to look French? not to be in favor of gay marriage? If that's so, how can he think he has political capital to spend on tax reform or social security or anything else?

You're right, that was briefly mentioned when this started, though it
quieted down quickly so I wasn't sure if it counted as the rhetoric
level was not at the normal level.

Anyway, his death has been upgraded to alive but deteriorating
dramatically, at least on AP news - I think I like Rueters better.

Frankly, I wonder how anyone in their right mind can attribute anything
other than utter criminality to George Bush.
Mandate? Don't make me laugh.
Daily I dodge his thieving fingers and I scoff at his future vision for me.
Alone in a room, I would do what I could to take him down, as the thug he
is.
I never gave him nor any other human the authority to tell me anything at
all.
Politicians are little more than assumptions. Assumptions by fools meant to
be led.
When I see someone, anyone, laud any politician I chuckle openly for I am

witnessing a person that has lost touch with his individuality, rendered over to a mob mentality. Then I frown, that another human has lost his way. But there is hope, as leviathan stumbles.....

2189. Re: radio-mart and gottahaveit1995 update

Newsgroup: rec.radio.shortwave
Date: 2004-11-09 18:29:20 UTC
From: JuLiE Dxer <MsJuLiE@verizon.net>
Message-ID: <1j12p01r6agknihogqika2c71dt8pkvi5v@4ax.com>
Source record: 2188

Is this Martyn Allison the same guy who is suppose to be in the UK who
also participates in the tv/radio/ham radio arena for selling.

Multicomm 2000,
Martyn Allison
Unit 3, 86 Cambridge Street,
St.Neots,
Cambridgeshire,
England, PE19 1PJ
Telephone 44-1480-406770 Fax 44 1480 356192
Web site http://www.multicomm2000.com
We are key account holders and specialise in all aspects of Amateur
radio, especially export to the USA and the far east.

the website didn't seem to work and is registered out of

RAY CHOATE
938E SWAN CREEK RD 109
FORT WASHINGTON, MD 20744
PHONE: 1-909-888-5500

The ARRL lists multicomm2000 as a Radio Dealer.

He also seemed to have this website going:
http://rcynot.webstoreclub.com/

but this is what it brings up:
"Sorry, rcynot has been deactivated ."

****
They had a "store" on ebay under the name "multimart2k"

From a cache of his "store" on ebay via google.com

"Multi-Mart 2k Seller, manage Store
Maintained by multicomm(12)

Everything from Broadband equipment, Toys, Video Game Consoles and
accessories to Voice Over Internet Protocol technology can be found
right here. Popular brands you would find at your favorite department
store. www.multicomm2000.com "

*****

A google newsgroup search shows that RadioMart used MultiComm2000 back
in 2000 and is the very same person and was frauding people back then
too.

I guess his scam/fraud routine at least goes back to 1997.

a newsgroup postings regarding his fraud back in 2000:
http://groups.google.com/groups?hl=en&lr=&threadm=20000914182923.12232.00000189%40ng-fy1.aol.com&rnum=3&prev=/groups%3Fq%3D%2522multicomm2000%2522%26hl%3Den%26lr%3D%26selm%3D20000914182923.12232.00000189%2540ng-fy1.aol.com%26rnum%3D3

Nice detective work.

2199. (OT) - We are (The USofA is) a Constitutional Republic

Newsgroup: rec.radio.shortwave
Date: 2004-11-09 19:00:17 UTC
From: rhf-newsgroups@pacbell.net
Message-ID: <ff3145e8.0411091100.43e5aba@posting.google.com>
Source record: 2197

BP,

We are (The USofA is) a Constitutional Republic {a Federation of
States} that holds Democratic Elections for most Public Offices
'except' for the Office of the US President and a few others.

The US President is 'elected' through the Electoral College
System. A Process that gives "Weight" to 'smaller' States to
provide them some protection from the Larger States.
{The "Oppression" of the Masses.

YES - It is True that the US House of Representatives and US Senate
are both 'directly' Elected by Voters (American Citizens).

However, the US Supreme Court is Appointed by the US President
with the Approval of the US Senate.

THE BOTTOM LINE - The US Presidential Election 2004 Results:
* President George "W" Bush "Wins" with 286 Electoral Votes.
* Senator John 'ff' Kerry got 'only' 252 Electoral Votes and lost.

So Say I, My Opinions Stated As Facts ~ RHF

Are these the same 'visual' people who have trouble speaking because
they try to see the phonemes for each syllable?

Propagation on MW was so bad Sunday night / Monday morning that I
couldn't find a station that carried Coast To Coast (other than WLS,
which is really close). Seriously, the band was dead, dead, dead.

2207. Re: DRM receivers

Newsgroup: rec.radio.shortwave
Date: 2004-11-09 20:17:46 UTC
From: Al <aburzynski@nojunk.satx.rr.com>
Message-ID: <KB9kd.45729$tL5.31706@fe2.texas.rr.com>
Source record: 2207

If you have a receiver with a 12KHz IF, all you need to do is feed this into your sound card and Dream software (available for free) will decode the DRM program. Give it a try before you invest into it, to see if you like it. I would not invest a lot into it at this time, but I believe it is the direction SW is going.

The sound quality of DRM is much better than standard shortwave. Its biggest downfall is that it needs a lot of signal or you will get drop outs (total loss of signal). Drop outs are very annoying and a lot harder to take than standard fading on short wave. Music comes across very nice via DRM, unfortunately there isn't much music available on short wave.

I get solid copy most of the time from Bonaire, Netherlands Antilles and Sackville, NB Canada. I have not picked up anything from Europe.

Like I said, give it a try and see how you like it.

> Or they may have forgotten to update the page.

A few months ago I was thinking about investing in a new receiver. I noticed that Lentini had the 7030+ still listed on their website, so I called them to see if they actually had it in stock. The guy I talked to told me that they'd order it for me from AOR USA and that it would be shipped to me directly from their facility in California. This didn't make sense to me, as I knew that AOR USA had long ago ceased to carry the 7030+, and a call to AOR USA confirmed this. I then contacted Lentini and told them about that I'd been given incorrect info and that their website was out-of-date. This was many months ago, but the same old data is still on their site. It would only take about two minutes to correct it.

Oh well. Even more irritating to me than an out-of-date website is the fact that the 7030+ isn't available anymore in the States.

Steve

"Change" if not "progress". [smile]

> Are analog SW radios going away?

I've got a Ten*Tec RX-320 abd can have it
converted for U$60 and buy the software
for another U$60 (last year anyway).

So, U$120 to play with a few stations.

Most commercial and national shortwave
broadcasters are much more interested
in reaching an audience of ten of
thousands (more or less) rather than
23 listeners.

So - for most folks - there would be the
necessity of buying a new shortwave
radio but for what?

And - going from the experience of a domestic broadcasting in Single-Side Ban
- which went over like sumthin or anudder - no one (with the exception, of
course, of bleeding edge pre-early adapters) - is going to rush to go with
DRM.

The above is solely my opinion and I haven't paid any attention to DRM since
the first few months after it was introduced. (I'm not overly excited, as you
prolly tell [grin].)

Message-ID: <gU9kd.10161$Gm6.7122@newsread3.news.atl.earthlink.net>
Source record: 2213

Do any of you guys run your radio equipment on battery power? I was just considering this approach as an alternative to the noisy house mains. Would like something I could use permantly inside that can be recharged from house current. Does anyone have any suggestions? Is this a feasible idea?

-Brian

I have an S350 in good condition (8 of 10), antenna is a look alike
replacement. has original box and manual and an ac adapter
I will sell/ship to anywhere in the lower 48 states for $50
a bit more elsewhere.
email me at mmaghakian@yahoo.com

Too bad.

The 7030+ is a nice radio. The worst thing I can say about it is the stock filters were too wide or too narrow for my tastes.

You can still import one from England.

Regards,

Mark

Ah, but the resemblance was distant.

The one which has always amused me
is "Bonanza" and "Bonanza in Outer
Space" ["Battlestar Galactica"].

I've never been convinced that they didn't
just re-use old "Bonanza" scripts and
pencil-correct things such as "Ranch"
to "Space Ship" and Little Joe to
whatshisface.

And, then, of course, featuring
Robbie the Robot as in like
Bill's "Tempest".

I don't know what the current drain is on your R75, but a few people have mentioned running Drake R8's on car batteries. They charge them with trickle chargers.

My "portable" 7030+ system has two pairs of NIMH battery packs designed for RC cars. They give me about 9 hours of listening on a charge. But the 7030 draws very little power for a tabletop.

One advantage of a battery system is you'll be ready to listen during power failures - when the noise level is extra low because nobody in the neighborhood is using gizmos that generate RFI.

If you want to do that sort of thing get a 'deep cycle' battery, rather than just an ordinary car battery.

2225. Home Intercom systems - possible source of RFI

Newsgroup: rec.radio.shortwave
Date: 2004-11-09 21:50:23 UTC
From: DesignGuy <dontbother@nowhere.com>
Message-ID: <zYakd.318450$wV.41609@attbi_s54>
Source record: 2225

For several years there have been annoying carriers on the SW bands at my location - one of which was parked on top of WWV 10MHz. I recently decided to track down some various RFI noise and discovered that my home intercom system was the culprit. The one I have includes an AM/FM receiver and I think it's the FM section putting out a carrier on or about 10MHz.

Hope this helps someone with similar troubles.

You may find that too much of an external antenna will overload the receiver's front end, causing images all across the SW bands. Some portables are notorious for this, though I'm not familar with the 800A.

Perhaps try with a long wire first, before doing all the work required to install a T2FD.

Hi
I have a dx-392 shortwave with tape recorder
Am Fm Lsb Usb
Comes with original box and i think i still have the original manual if not
yoou can download it from radio shack.
$110 shipped. lower 48 states.

I run my R-75 on deep cycle batteries during DXpeditions. It works just fine, and provides, many, many hours of operation.

I recommend using a battery box to contain whatever battery you choose. It's not worth the risk of a ruined floor or carpet!

If your house mains are noisy, are you positive that the noise is entering through the AC line cord? It's very likely you're picking it up direct via the antenna. If so, a battery won't help the noise coming in through an antenna.

Guy

Yeah, I get zero noise when the mains are shut off. How have you connected your receiver to the battery, is there some kind of converter for this?

This is totaly my opinion:

Shortwave broadcasting is used for two things.

1. To reach an audience outside of one's country to for propaganda,
cultural or relegious purposes.

2. To spread news, etc inside a country where there are large areas with
poor communication, e.g. Northern Canada, India, Russia, China.

DRM is a way of providing high (sound) quality programing using existing
shortwave transmission facilites. It is not compatible with older recivers
and therefore requires the listener put up money to hear it.

In some places it will take off. For example, I assume that shortwave
broadcasting in remote parts of Canada has been replaced by the internet
where possible. Where there is no internet access, DRM will move in to
fill the niche.

In other places such as India or Africa, where the population is poor and
can't afford batteries yet alone radios, good old fasishioned AM will remain
for many years.

Relegious brodcasters already use shortwave, satelitte tv and the internet,
some will add DRM as way of reaching a larger "flock".

The only reason I see DRM taking off in poorer countries is because being
digital it can be encrypted. For example, a someone could produce
DRM radios that only play signals encrypted with a certain key.

How about that for VOA or Radio Moscow only radios?

Geoff.

Man Overboard Software is pleased to offer a no-compromises control program for the Icom IC-PCR1000 computer-controlled communications receiver. MacR-1000 manages frequency lists, supports band searches (with lockouts), CTCSS tone searches, and frequency-list scans. Frequency lists can be imported from tab-separated text, CSV files, and .dbf files; export to tab-separated text and CSV.

Saving of frequency lists is disabled until a registration code is purchased for $21.95.

MacR-1000 requires a serial port and Mac OS X version 10.3 or later.

Visit <http://software.manoverboard.org/> for more details, including the complete user manual.

No converter required, just an appropriate connector. Not sure of the
size as I was feeling like truly stimulating the economy and ordered
the Icom 12V cable with connector. Hook it directly to the batter
and you're set. dxAce is right about the deep cycle battery, they
are designed for use under load and being drained half-way or so on a
regular basis, a series 24 (typically around 80 amp hour rating) would
be sufficient and give 40+ hours of radio time before you'd need to
consider recharging the battery. Another option is to get a trickle
charger and just leave it on - except when using the radio as it would
be a noise source.

Yes, up to a point. If a seller has accumulated several negatives in
the past 60 days, I'm more concerned that enough people have had a bad
experience than I am with the particulars. Besides there is one
certainty on Ebay...there will always be another of that same item.

> http://www.commondreams.org/views04/0225-05.htm

Maybe true, maybe not.
But one must remember that the "left" demanded CHANGE after the 2000
mess in FL.
I dislike all "paperless" transactions, be they fianancial or
election.
But the US public demands instant results. And no paper ballat system
can ever be fast enough. I remember watching election night as some
young
woman, identified by a lower third proclaiming her to be a Demonrat,
nearly
screamed that "this delay is not acceptable". She went on to say;
"Surely in
the 21st century, in the most advanced(sic) country on this planet, we
can
do better". Better in this case clearly meant faster.
I was concerned about the BIG difference in the outcome and the
projections based on exit polling. But whem several news sources
mentioned that Demonrats
were much more likely to respond then the evil Republicans, and that
state laws
keeping all 3rd party types (pollers, boosters etc) further away from
polling
places then in 2000, the difference made sense. Not saying that this
or any election is fair. A friend I worked with told us stories about
how his father
had been a city employee in Lousyville KY and had for years spent
election day
going from precinct to precinct voting in the name of people who had
recently
died. I have no proof that he was not telling tale tales, but the tone
of
the conversation lead me to accept what he said as being true. In his
case
it was the Demonrats that controlled the election. In 1996, it is
generaly accepted that Paul Patton stole the election with his
overwealming win in Jeffereson County KY. Lousyville is it's county
seat. After a grand jurry
handed down indictments against several top Demonrat party officials,
and
at least one union offical, one indicted lady killed herself. The feds

have really been heavy into election fraud in KY and I suspect that she either knew she was going to jail, or someone decided that she would plea bargin and shut her up. The Demonrats used to hand out "walking" money like Saint Nick hading out candy to kids, the difference being it was a very thinly disguised way to buy votes. The feds put and end to that.

I am reminded of the big stink in Cook county IL after Nixon lost that election election. It has been too many years, and I was only 9, but several
of the major news magazines ran articles on how the dead voted and pusehed the county for a Demonrat win.

I am not defending any election fraud and would like to see any and all such actions raised to the level of treason with manditory death for any and everyone who particpates. And I would go so far as to modify the US constitution to mandate "truth serum" to be used in all such cases. If it were up to me it would extend down to people stealing
or defacing poltical signs on other peoples property.

It might not bring the US any closer togather in political terms, but it would damn sure raise the stakes of the all too typical poliitical "dirty tricks". Like the 6 or 7 vans rented by the Republicans to transport
people to vote that had the tires sliced, apparently by the son a Demonrat
FL politico. Or the local idiots here in Lexington who stole Bush and Kerry signs. Or the fool in Ohio who was paid with crack to gather voter registrations, and who was so lame as to use fairy tale names. Or the principal at a special ed school who bribed his students to vote
with ice cream.

And if for no other reasn then I don't trust any electronic system to be tamper proof, I for one hate them and up until 2000 voted by absentee ballot. But KY
changed the rules and made most people who had used paper ballots use a special, reserved voting machine. I was told the paper ballots where just "too hard to
handle." I argued "no, not too hard to handle, but to hard to falsify". I pissed the election board off big time. And at that time KY was completly controlled by the Demonrats. (both houses and the Gov where Demonrats and did pretty much as they pleased)

I guess we are seeing Darwin in action. Before the party with better access to the registration process had the advantage. But now the smartest party, or the party able to buy the smartest talent will use technology to effect elections. Maybe the right has better (ormore corrupt) programers then the left. Or maybe this election was as fair as any US election has ever been.

There used to be some HF beacon a the high end of the 10Mtr ham band.
But I have no idea if ay are still active.
Do a google search for something like
+satellite +beacons +ham
I bet you will find something interesting.

I'm not particularly religious, although I enjoy playing the devil's advocate with anti-religious bigots. Why is it that you get to have your "religion" preached in schools but others do not?

>
> Science rules!

That's fine--you're entitled to your own brand of religion and belief system. It's just too bad you have to denigrate the belief systems of others in order to feel superior.

The end of the wire of the antenna can be attached to the center of the
coax lead in. More info at the AMANDX site below under antennas

Go for the deep cycle marine battery. I have been using hem since the
late 1980's on DX'peditions.
Yes a battery box is a good idea..I use one all the time.
A trickle charger works well but of late I have been using a small solar
panel to keep the battery up to full power. It is attached all the time.
My Drake R8 and ICOM ICR-70 both run well off the battery as do some
accesaries such as my Quatum loop and my MFJ phaser. This year I
purchased a MFJ 12 volt power bar with 8 sets of jacks. I could run up
to 8 things at once but as of now just the 4 listed above with no
problem at all.

How are the intercom stations connected? There's the obvious wire, but
at lest some use signals in the hundreds of KHz range. The signal is
impressed on the house wiring, and while much of the signal will be limited
to the AC line, obviously some of the weak signal can radiate.

Sorry, forgot to mention this is a *wired* intercom, built in the walls of
the house. Not like the kind that plug in a run over the AC lines.

It's been demonstrated beyond all reasonable doubt that a small group
of chupacabra caused that power outage. For details, consult the
archives of the Art Bell program.

2253. Reducing effects of RF noise?

Source record: 2253

Hi all. As I've posted previously, I live in a large dorm/apartment building. I'm stuck here with my wife for the next three years or so. Anyway, I have a Grundig YB-400PE. Recently I got the Sony AN-LP1 active antenna, which has seemed to help a bit, but often times stations are still unlistenable because of the large amount of RF noise in the building. If I take the Grundig outside more than about 3 yards from the building, I get crystal clear reception and stations from all over the place.

With winter coming, going outside isn't a great option. (I'm in Wisconsin...brrrr...). Any suggestions on how I can reduce the effects of RF noise? I have the radio and antenna in a window, and it is still very noise-laden, especially on SW. AM is a little better, but not much. FM seems ok...but I don't listen to much FM on this radio anyway.

Thanks in advance.

2254. Mac OS X control software for Icom PCR1000

Newsgroup: rec.radio.shortwave
Date: 2004-11-10 01:05:30 UTC
From: fritza@manoverboard.org
Message-ID: <82b0b610.0411091705.12671e69@posting.google.com>

Cross-posted to: rec.radio.shortwave,rec.radio.scanner

[The following seemed not to propagate out of my home ISP. Sorry if, in obedience to the Demo Gods, the original shows up and makes this a duplicate.]

Man Overboard Software is pleased to offer a no-compromises control program for the Icom IC-PCR1000 computer-controlled communications receiver. MacR-1000 manages frequency lists, supports band searches (with lockouts), CTCSS tone searches, and frequency-list scans. Frequency lists can be imported from tab-separated text, CSV files, and .dbf files; export to tab-separated text and CSV.

Saving of frequency lists is disabled until a registration code is purchased for $21.95.

MacR-1000 requires a serial port and Mac OS X version 10.3 or later.

Visit <http://software.manoverboard.org/> for more details, including the complete user manual.

SW reception is fairly non-existent this morn in Sactown as well. MW reception
was fairly decent, though. Listened to San Diego's Mighty 1090, Sports XPRS,
for Westwood 1's Monday Night Football coverage, as KNBR was airing
Warriors-Mavs contest. Locked in like a local.

Yeah, sw has been pretty dead here also, even wbcq was barely audible,
though I'd prefer to listen to nothing for the most part. This morning
though, mw reception was great for some reason. The whole band was alive,
which is really unusual here during the day. WAYR 590, or something along
those lines, in Jacksonville, Fla. sounded like a local, among others I fail
to recall to memory.

I would never denegrate anyone's faith, even those diametrically opposed to my own.. Personal belief systems should be the domain solely of parents and other family, coupled with whatever clergy apply for that faith. The government nor the school system should enter into it (unless of course the person is a student of a faith based private school).

However, science is not a religion, nor is it a faith of any kind. It's based upon a sequence of repeatable trials wherein something is first a hypothesis (formulted idea), then a theory (because it has yet to be proven) and then law (once it has been proven). Religions are based solely upon faith, or belief, in something that cannot be proven (this is not necessarily a bad thing).

As for evolution being taught in the schools as fact, I do not believe this should be done in the primary (K-8) or secondary (9-12) school systems. It is a theory only, and has yet to be scientifically proven. It is fine, however, to teach it AS a theory in institutes of higher learning as one possible way in which the life on our planet came to be in it's current state of being.

2264. Re: Lead in wire

Newsgroup: rec.radio.shortwave
Date: 2004-11-10 02:04:24 UTC
From: Al Patrick <arp@_NOSPAM_inet4u.com>
Message-ID: <10p2tph3lvregef@corp.supernews.com>
Source record: 2264

Connecting the lead in wire to the middle of the antenna creates a dipole antenna which is very good for transmitting - and I suspect, equally good for receiving. However, lots of folks use what is called a long wire antenna and they, so far as I know, all connect at the end. So, I think you will get improved reception with either one. Perhaps someone else will clarify this somewhat. You didn't state what radio you'll be using it with. Some cheaper receivers have a tendency to overload fairly easily with good external antennas.

There are antennas which use multiple length radials (i.e. the discone (? one or two s's)) to give improved reception on multiple frequencies. I suspect the DX sloper works very similarly. Therefore, I suspect you could place it well off center to give improved reception on the low end and the high end of a frequency range. You'd need to consult a formula to determine the optimum length wire for a given frequency.

>Why is it that you get to have
>> your "religion" preached in schools but others do not?

Science is not a religion. Sure, some people are overly enthusiastic about it and misuse, misquote and misinterpret 'science' so often that it would seem like a religion to others. But make no mistake about it. True science is not just another belief system. Algebra, geometry, calculus, physics, biology, chemistry, are all sciences. Just playing a game of basketball or tennis or any other sport involves the use and/or exhibition of scientific principles concerning physics, geometry, ballistics, etc. It HAS to work every time, or we wouldn't be able to walk on the ground.
Unless we shouldn't be teaching gravity.
Also, any number of religions are indeed preached and promulgated in thousands of schools in the U.S., the majority being of the Judeo-Christian belief system(s), as disparate as they can often be with each other. It is 'mostly' kept out of public schools because once people's taxes get involved, you have to be as fair and even-handed as possible, so that no one is excluded SIMPLY because of their religion.
It's best to leave worship and spiritual education in the hands of parents and clergy anyway... We've seen what the public school system has done to basic language and math skills, and I CERTAINLY don't want public schools to be trying to negotiate the tricky waters of teaching ANY religion.
But as a local redneck here in SW MO once told me, regarding my question to him about the poor English skills of modern high school students in this area, "It was good enough fer Jesus, it oughta be good enough fer any kid in any school!".
He was quite serious.
To bring this around to being *remotely* on topic, if you listen to just about every American SW program dealing with religion, you'll find all kinds of stupifyingly absurd notions of religious belief... and who's to say that if public schools were allowed to preach, they wouldn't preach some similarly twisted version of any given religion, whether YOU wanted them to or not. You'd still be paying for it. Not too fair.
So let religion be in the private schools, keep the public schools as neutral as possible.
And don't be so quick to dismiss science as just another belief system. You wouldn't have any shortwave radio without it... among just about everything else we need, use and enjoy. There's nothing wrong with measuring known quantities, investigating unknown ones, interpreting data and questioning outcomes or balancing a set of given hypotheses. The Bible doesn't condemn the use of science, overtly or implicitly. Science helps us understand, more properly use and live with, the world around us.
Linus

2271. Re: Listening To Satellite Beacons With Shortwave Radio

Newsgroup: rec.radio.shortwave
Date: 2004-11-10 03:29:49 UTC
From: JuLiE Dxer <MsJuLiE@verizon.net>
Message-ID: <t023p0d5pf5k6afd87batglgdltm6h4d1c@4ax.com>
Source record: 2271

Terry is talking about the RS12 satellite that had a cw beacon
somewhere around 29400 or so. The beacon was associated with a 15m/10m
repeater. It believe it was 15m up, 10m down. I haven't worked the
repeater in over 10 years and am not sure if it is still in orbit.

Some looking around seems to show that RS12 isn't available. RS15 is
available with these stats:

****
Radio Sport -15 (RS-15)
Uplink 145.858 to 145.898 MHz CW/USB
Downlink 29.354 to 29.394 MHz CW/USB
Beacon 29.352 MHz
Launched 26 December, 1994

Status: Semi-operational
RS-15's beacon is occasionally heard and may be quite strong at times.
At times the beacon is just a continuous carrier lasting up to 30
seconds, at other times it seems to be sending CW. There have been a
few reports of hearing CW through the passband and Al N7EQF has
reported having a CW QSO.
****

An also AO-7 has a 10m beacon. Here are some stats on it:

****
AMSAT OSCAR 7 (AO-7)
Mode B Uplink 432.125 to 432.175 MHz CW/LSB
Mode B Downlink 145.925 to 145.975 MHz CW/USB (inverting)
Mode B Beacon 145.9775 MHz (CW telemetry)
Mode A Uplink 145.850 to 145.950 MHz CW/USB
Mode A Downlink 29.40 - 29.50 MHz CW/USB (non-inverting)
Mode A Beacon 29.502 MHz (CW telemetry)
Launched 15 November 1974

Status: Semi-operational
AO-7 became non-operational in mid 1981 due to battery failure . In
2002 one of the shorted batteries became an open and now the
spacecraft is able to run off solar panels. For this reason it is not
usuable in eclipse and may not be able to supply enough power to the
transmitter to keep from frequency modulating the signal. Lately AO-7
has favored Mode B almost exclusively.

Poisoning has been officially ruled out, although apparently
the rumors and suspicions are flying hot and heavy among
Palestinians and Arabs.

On the BBC earlier I heard a Arafat spokesman putting all
responsibility for Arafat's illness and condition on

Israel, insisting it was their confinment of Arafat to
his compound for the past several years and denying him
ready access to proper medical care that caused all this.

I expect Israel to disagree...

>Anyway, his death has been upgraded to alive but deteriorating
>dramatically, at least on AP news - I think I like Rueters better.

Latest newsreports I've heard are that his brain, heart, and
lungs are still functioning. Given how much wiggle room that
leaves (ie, what about his other organs, by 'brain' do they
mean the whole organ or just the brainstem, are they functioning
on their own or with mechanical assistance, etc, etc), I don't
have high expectations...

TE & DAVID,

Hard Sciences like Mathematics, Chemistry and Physics; may indeed rule.

But TECHNO-BABLE so called "Scientific Theories" like the
'Theory of Evolution' are in-fact simply 'science-ologies'.
[ Speculation and Un-Proven Science ]

Why not open-up the Class Room to Alternate Theories and thereby
'create' a "Knowledgeable Discussion" of Diverse Ideas.

I think he's talking about the 803a, aka the Realistic DX-440.
It's a good radio in it's day in the bang for the buck category,
and my DX-440 still does a good job when hooked up to the
outside antenna. The variable SSB on it makes it good for
ham and other SSB listening. It was outclassed by the
Sony 2010 mainly because of the lack of a sync, but that's
simply my opinion.

Kerry supporters seek therapy in South Florida

More than a dozen traumatized John Kerry supporters have sought and received therapy from a licensed Florida psychologist since their candidate lost to President Bush, the Boca Raton News learned Monday.
Boca Raton trauma specialist Douglas Schooler said he has treated 15 clients and friends with “intense hypnotherapy” since the Democratic nominee conceded last Wednesday.
“I had one friend tell me he’s never been so depressed and angry in his life,” Schooler said. “I observed patients threatening to leave the country or staring listlessly into space. They were emotionally paralyzed, shocked and devastated.”

Source record: 2287

I was catching similar results last night at around the same time from Ventura, Ca. Radio Cultural Coatan was armchair copy, Radio Verdad was putting in a very good signal, and I was catching some fair audio from Voice of Guyana on 3291.1 (I usually can zero beat a carrier, and sometimes get some very weak audio). Unfortunately, I had to rush out to attend a meeting, so I didn't have time to log, etc. But what I was hearing was FAR better than normal for these bands!

Drake R8B, 50 foot random wire phased with an Alpha Delta dx-swl sloper through an MFJ 1026.

I am using the Drake r8B. I connected it to the radio. It seems to work pretty good. Radio Havana Cuba is coming in 20 decibels. Although I am not getting much on 75 meters. Maybe just quiet tonight.

> faith, or belief, in something that cannot be proven (this is not
> necessarily a bad thing).

I hate to nitpick but ...
- scientific laws describe things (they are regularities),
they do not explain them (i.e. a law is not a theory that
has been proven)
- a hypothesis is merely a testable statement (normally
deduced from some theory -- see below), also not
explanatory. A testable statement is called a hypothesis
when it is the subject of scientific testing.
- theories, OTOH, are explanations of observable phenomenom.
Meaningful theories include testable statements -- a
testable statement is called a hypothesis when it is the
subject of scientific testing.
- theories are never proved correct, they are confirmed (by
facts that are consistent with its testable statements). At
some point when there is an abundance of confirmation for a
theory, combined with the opinion of scientists, that theory
becomes an "accepted" theory (not a "proven" one). Accepted
theories may later be rejected upon discovery of
counter-examples (facts contradicting the testable
statements). Herein lies a hallmark difference between
Science and dogma: (scientific) theories are accepted
provisionally.

Sounds like a typical case of "steel frame building". It's not the
noise as much as the construction is shielding you from the RF.

Maybe a fish pole with 20-30 feet of magnet wire?

And it probably wouldn't work. According to one of the series of
articles in Elektor Electronics magazine, you need a good oscillator
in your receiver to get a signal the software can deal with. Their
DRM receiver project used a DDS chip for the LO.

I don't know that much about DRM, but my understanding is that stations either come in very clearly or not at all. In other words, if there's a really distant station, you can't dig it out of the mud and just have to write it off. Is that correct? If so, I don't think I'd want a DRM receiver. But again, I could be wrong about this.

The fact that this story is attributed to Paul Harvey is the best clue that it's horseshit.

I'm just north of you in Daytona Beach, can hear the same station at
2100 Local but weak. Don't know if its in Orlando or not but down on
1020KHz been receiving strong non-english station and what sounds like a
timesignal station. Normally on 1020 KHz I can receive KDKA out of
Pittsburgh but tonight they're totally wiped out. With the solar flares
its really got some interesting things happening.

For MW I'm using a JRC NRD535, 150' longwire.

An indoor 1 meter diameter shortwave loop perhaps? Supposed to be good at reducing the type of noise you are experiencing and it is bi-directional so you can null out and/or peak signals.. Lots of DIY loop projects on the net - yahoo has a group dedicated to loop building.
Would be a good winter project.

Packers suck! :-))

From what has been said over the years, the best battery is (actually are
iirc they are 6v) the golf cart batteries.

The suggestion made when we were discussing this was go out to 2 or 3 golf
courses and see exactly what brand/type they're using.

Also, I wonder if it wouldn't be worthwhile to buy a couple of them ($20 or
so) and see how long they'll last. Just because they won't do a great job of
onercoming inertia doesn't mean that they can't do an excellent job of
pushing (comparatively speaking) electrons into radio gear.

Solar should recharge just fine. The brand name I've seen rated best is
"Kyocera". A guy here has done a /lot/ of comparisons but he stopped cold
after getting his first Kyocera because he didn't see any reason to keep
looking.

2313. Re: Home Intercom systems - possible source of RFI

Newsgroup: rec.radio.shortwave
Date: 2004-11-11 02:15:49 UTC
From: 0ff_Ramp <loo|>
Message-ID: <10p5is1nnhqfu77@corp.supernews.com>
Source record: 2311

I would scrap the wired intercom and get one of those new 5.8GHz cordless phone systems with multiple handsets. With some of those new sets you can page individual handsets from any other handset or a system wide intercom page. I use the AT&T 5840 base with 4 additional 5800 handsets and it works like a charm.

I'm almost certain you are hearing a "harmonic" of the Canadian time station, CHU. I don't recall it's exact frequency off the top of my head, but it's roughly close to 3 times 1020. Odd stuff happens in radio, sometimes, most especially in shortwave radio.

It's most likely due to an aversion to thinking. When superiors tell you how to think and when to think it, life becomes much easier. The fundamentalism is also a step toward increasing militarism.

There seem to be more similarities between the American Taliban and radical Islamic types than most care to admit.

It's impossible to commit evil when you're doing it all for your own particular flavour of the Creator and the betterment of mankind.

I find it amazing that 'forgiveness', 'charity' and 'unselfishness', while being among the most important virtues of Christianity, are the FIRST ones out the window when greed and bloodlust fall on the Washington crowd. The word hypocrisy comes to mind.

If you're gonna spread a faith, EXAMPLE is the best way of doing it, not having your televangelists soften up the donors before the invasion.

As an aside, someone once said that the smartest thing locals anywhere could have done was to burn ALL the explorer's ships down and kill every missionary. Season to taste..

Some of the latin stations use a clock ticking effect. Perhaps the french
(Quebec) station is as well, or you're hearing them both together.

Yeah, right. Like all those "good Americans" in the photo gallery who refuse to accept the legally elected president? Who want to defect to Canada? Who embarass our nation by "apologizing" to the rest of the world for being Americans? "Good Americans" like that treasonous lying communist pig Michael Moore? Like that Hungarian communist traitor George Soros? Like the Communist Party USA who endorsed John Kerry? Like Dan Rather who used CBS to spread lies about President Bush?

No more left-wingers in the USA? Bullshit.
All the cold war did was to eventually bankrupt the USSR. It did nothing to stop the communists living in the USA, many who call themselves "liberals".

But just so you don't complain about an off-topic post, I'm pleased to report that WWV is being heard on 5 mhz.

I don't see anything linear in F vs C for a resonant circuit. In fact, in order to make it anywhere close to linear, one has to go to extremes with the shape of the plates.

It will be handled by you, the shortwave listener with BPL interference,
buying the highest power CB transceiver legally available, and chatting
with other people during prime-time internet usage time, knocking the part-
15-device BPL system off intermittently.

Oh, you meant the FCC. They won't do anything.

Probably correct Mike. Even though we are dealing with different areas of
the FCC rules (BPL falls under part 15). It seems in their latest rulings,
the FCC is going to give more headroom to whatever inteference is caused by
BPL.
Looks like our best hope is that BPL is horrible technology and will likely
be outmoded by WiMax, WiFi, fiber, Cable, Flarion etc.

> pushing (comparatively speaking) electrons into radio gear.

Very true. Even if they don't do too well in a golf cart, they may
last for another fifty years if powering a radio.

I've been hoping to get very lucky and find some swapped out phone
company wet cells. I had one when I was a kid. They had a clear case,
with a built in hydrometer. Six volts and monster plates with NO
sediment or visible sulphation.

I'd kill to have a few dozen of them now. I recently got 160 watts
worth of solar panels that could really use the storage space

Until I hit the jackpot, I'm using US Batteries 2200 225 amp hour
models, which are similar to the Trojan golf cart batteries. These are
all mid range quality, falling between car batteries and TRUE deep
cycle (read $$$$$) batteries. It's a compromise.

My bad. Not linear in the sense of d-pF/d-theta = K. But more
the idea of no sharp changes for slight adjustment of the rotors.
Continuously differentiable, I should have said.

But if a linear variable cap *was* desired, the plates shouldn't
be all that hard to fabricate.

Well, I just had a wonderful, evil idea. Think for a moment of
noise canceling headphones. All you need is a circuit that can
invert a signal and insert it back within a degree or two of
phase.

What did you say was the highest frequency on BPL?

OK, maybe it wasn't wonderful, but you have to admit it was evil.

Ebay is how I got my HQ-180, two years ago. I got lucky, because it was actually as listed; mint condition. Everything, including the clock, was in perfect working order. There were several listed at the same time, but this one was the cream of the crop, and the seller had an excellent rating. It didn't come cheap though. A bidding war got it into my shack for $500.00, but it was worth every penny. I hope you find one in similar condition to mine, because it really is a great classic radio. Good DXing to you, Gary

3 times 1020 = 3060.

CHU is on 3330.

At any rate, it would not be a harmonic, but rather a subharmonic.

After doing a bit of quick research it might have been Radio Reloj out of Cuba.
They broadcast the time ticks.

See:

http://www.worldofradio.com/dxld3192.txt

And also other references.

Yes, Radio Reloj or Radio Clock. The time signal ticks are part of their programming, also news, etc. Sometimes (if not all) they send a 'RR' in code every now and then.

This may be part of a jamming effort in this case.

HF PROPAGATION FALLING VICTIM TO STRONG SOLAR WINDS

http://www.arrl.org/news/stories/2004/11/10/7/?nc=1

NEWINGTON, CT, Nov 10, 2004 --- As HF radio conditions drift in the doldrums, the Space Environment Center (SEC) reports that geomagnetic storm activity spiked into the ``extreme`` (G5) category over the past 24 hours. A result of disturbances in Earth`s geomagnetic field caused by gusts of ``solar wind`` blowing past the planet, geomagnetic storms have adversely affected HF radio propagation over the past few days and even resulted in limited radio blackouts. Although things had calmed to ``moderate`` (G2) by 2000 UTC, geomagnetic storm activity at the G5 level can affect more than just radio propagation. Severe geomagnetic storms also can abruptly increase drag on spacecraft and even cause electrical power blackouts on Earth.

``I don`t know when it will end,`` said Tad Cook, K7RA, who compiles the weekly ARRL propagation bulletin. He said during heavy solar wind conditions, amateurs typically experience north-south propagation. ``It isn`t that north-south connections are enhanced during heavy space weather,`` he explained. ``It is the only propagation that still works during conditions like this.``

The recent space weather conditions also have resulted in auroral displays visible as far south as the Middle Atlantic states over the past weekend. The SEC estimates that G5-scale geomagnetic conditions will occur on four days of each 11-year solar cycle.

The forecast shows the Planetary A index increasing over the next 24 hours, from 40 today to 50 or greater on November 11, although it`s predicted to drop to 10 on November 12 and move even lower over the weekend. During the height of the current solar cycle, values topped 150.

The Planetary A index relates to geomagnetic stability. Magnetometers around the world are used to generate a number called the Planetary K index. Every 24 hours the K index is summarized in the Planetary A index. Small changes in the K index are significant. For example, a full day with the K index at 3 will produce an A index of 15, a K of 4 would mean an A of 27, a K of 5 would generate an A of 48, and a K of 6 would produce an A of 80.

``Generally, the higher the latitude of the measuring station, the higher the K and A indices reported,`` Cook says. ``This is because the effects of geomagnetic instability tend to concentrate toward the

polar regions of the globe.``

In terms of radio blackouts --- disturbances of the ionosphere caused by X-ray emissions from the sun --- the SEC reports conditions as moderate (R2) over the past 24 hours but nil as of 2000 UTC. The SEC determines the radio blackout value using X-ray measurements from the primary GOES satellite. The chance of an ``extreme`` R5-level radio blackout is less than one per 11-year solar cycle.

Solar radiation storm activity has been ``moderate`` (S2) over the past 24 hours and continues at that level. This degree of activity can have small effects of HF propagation through the polar regions, the SEC says.

The vast majority of the political posts are the result of x-posts
from the political NGs. If you don't open them, you wouldn't notice
that. It's not an excuse, but it -is- a fact. So your message on
r.r.s. is not reaching any number of people whose posts appear here.

Nah!!! It seems many have decided to talk over his
daily "ego-casts" on 3.975, 14.275 and 3.890 AM
like sooooooooo many hams have been doing this
past week. (be sure to listen during the 5 second pause
when he gives his "10 minute ID". The comments tossed
out 'in-the-clear' at that time are often quite humorous!!
One guy on 75 has taken to playing a clip of Moe from
The Three Stooges' classic clip: "...Quiet Numbskulls
I'm Broadcasting!!" at this point. (the first time I heard
that I actually *blew a whole mouthfull* of Pepsi-cola thru
and out my nose, it was THAT FUNNY !!!!!!!!)

baaaahahahahah!!

Of course you are: you prove it repeatedly in public, because
you have no idea what you're doing. You may be that way
due to malnourishment, lack of healthcare, and environmental
toxins, but in any case you're a good little pawn for Bush to
abuse as he pleases.

On Tue, 09 Nov 2004 14:16:23 -0700, Sir Cumferlunch <mesuck@this.con> wrote:

>Still waiting for the numbers of these Americans that were scared or
>tempted into voting against their own interests.

That's because you're too stupefied to realize that anyone
who actually voted for Bush did so out of irrational hysteria
or mistaken greed.

No rational person would vote for Bush.

The Owners manual I downloaded doesn't say whether the YB550 is dual conversion... and the address they gave to write for additional info customersvc@etonncorp.com is not active. So I'm assuming that if it were dual conversion, they'd have mentioned it and there would not be so much confusion. Does anyone know for sure?

| Now, what does the A index measure?
|
| Leonard

Changes in Earth's magnetic fields. As I understand it, the A Index
is a 24-hour average. Now, how do you use it? Well, speaking in
general terms (hold on here, I have to put on my asbestos skivvies),
an A index of less than 15 and a K index under 3 is going to yield good
HF (Shortwave) propagation. You'll also hear talk of solar flux.
Solar flux is a measurement of microwave radiation from the sun, and
generally can be used for predicting HF propagation - *if* you use
a smoothed average number.

I have a couple of really good links to share, if you found any of this
interesting.

I wouldn't say it wouldn't work at all. I was kinda expecting it might lock
for ten of fifteen seconds at a time.

I've got a bunch of FT-243 crystals, and I might even be able to find or
grind one to give me a suitable local oscillator for the radio.

Ten or fifteen seconds. That's about how long I thought this might be a
worthwhile project.

Rember the predicted death of Medium Wave.
What do you think revivied it to it's current robust state?

I think it was CONTENT!

Do you remember some of the technological "advancements" the
industry tried to institute in order to "compete" with VHF FM BCB?
(AM Stereo for one).

To broaden your listener ship, you need CONTENT.
Something people want, but can't get easily elsewhere.

Here is a thought: In 10 years HF BCB could be the terrestile equivalent of
sattelite radio via DRM. (is that good or bad?) In my mind it is only bad
if content is limited.
